Introduction — Data Analyst with 4 Years of Experience in interpreting complex datasets, delivering actionable insights, and contributing to data-driven projects valued at over 15million. Proficient in SQL, Python, Data Visualization, statistical analysis, reporting, PowerBI and Power Automate with expertise in translating business requirements into impactful analytical solutions.

Professional Summary

- Over 4 years of experience as a Data Analyst, working across various industries, including healthcare and finance.
- Expertise in designing and developing star schema data models, with a focus on efficiency and scalability.
- Proficient in business intelligence tools like Tableau, Power BI, and PowerPivot for building dynamic dashboards and reports.
- Skilled in developing and managing ETL processes using Informatica and Exadata, ensuring smooth data flow and integrity.
- Extensive experience in implementing OLAP cubes, data visualization, and creating interactive reports for business insights.
- Strong command of SQL for querying and manipulating large datasets, with a focus on optimizing database performance.
- Experience in collaborating with business and technical teams to gather and analyze requirements, ensuring alignment with business goals.
- Deep knowledge of data quality rules and ETL job execution, including address standardization, validation, and data cleanup using IDQ and other ETL tools.
- Proficient in writing and executing SQL scripts for database updates, including table modifications, stored procedures, and views.
- Experienced in conducting functional, regression, and UAT testing for data reports and ensuring quality assurance.
- Solid understanding of data modeling, metadata, and documentation, including DFD, ERD, and data dictionary creation.
- Hands-on experience with Python libraries like Pandas, NumPy, and Matplotlib for data analysis and visualization.
- Familiar with data modeling tools like PowerDesigner for restructuring logical and physical models to meet changing business requirements.
- Experienced in cloud data platforms such as AWS Redshift, Google BigQuery, and Azure Synapse, optimizing data storage and processing for large-scale analytics.
- Expertise in automation and scripting using Python and SQL to streamline data workflows, improve efficiency, and reduce manual intervention in ETL and reporting processes.

Skills

- | | |
|--|--|
| – Business Intelligence: Microsoft PowerBI, Tableau | – ETL Tools: Informatica, Alteryx, Tableau Prep, Datastage, IDQ |
| – Cloud: AWS, Azure, Google Cloud | – Big Data: Hadoop, Spark, SAP |
| – Languages: Python, SQL, JavaScript, R, Scala | – Management Tools: Management Studio |
| – Operating System: Microsoft, Ubuntu, UNIX, Linux | – DevOps Tools: Jenkins, Docker, Prometheus, Grafana |
| – Database: DB2, MySQL, Redshift, Snowflake, BigQuery | |

Health First

March 2024 – Till date

Data Analytics Engineer

- Managed data cleanup, extraction, and updates using SQL; conducted data analysis and research to identify KPIs and business trends.
- Created interactive dashboards using Tableau, applying advanced charts, filters, and visualizations to support business decision-making.
- Analyzed historical data to track KPIs, identify trends, and deliver actionable insights to stakeholders.
- Maintained Tableau dashboards and KPI reports for continuous performance monitoring and opportunity assessment.
- Participated in Agile processes including sprint planning, daily stand-ups, sprint reviews, and retrospectives, contributing to iterative project delivery.
- Collaborated with cross-functional teams to address project risks, plan mitigation strategies, and resolve issues.
- Built and maintained database objects such as tables, views, procedures, triggers, and functions within SQL Server environments.
- Worked extensively with AWS Redshift, configuring tables, stored procedures, and schemas for efficient data storage and retrieval.
- Utilized AWS Redshift Spectrum for joining external data sources stored in S3 with Redshift data, streamlining dashboard preparation.

- Automated data loading processes via AWS Data Pipeline, moving data from S3 to Redshift.
- Created Python scripts to interact with REST APIs and transfer data to AWS S3; leveraged Pandas for data cleaning and preprocessing, including reading and processing XML files.
- Performed data modeling and implemented data governance practices to ensure consistency, security, and quality across analytics projects.
- Integrating STTM (Structured Transactional Data Management) and STTP (Structured Transactional Data Processing) source systems for data ingestion and processing typically involves managing and streamlining both structured and transactional data from various systems into a unified architecture.
- Constructed ETL pipelines using AWS Glue and Spark, transforming and moving data from source to target environments.
- Conducted ETL testing, validated job executions, and ensured accurate data transformations.
- Tuned SQL queries and optimized performance using indexes, execution plans, and query refinements.
- Applied advanced data preprocessing, feature engineering, and calculated financial metrics for predictive modeling.
- Managed Matillion pipelines integrated with AWS SNS notifications for operational monitoring.
- Set up AWS SQS queues to manage job dependencies in Matillion across projects.
- Version-controlled and collaborated using Git, Bitbucket, and automated deployments through Jenkins.
- Modeled large, complex logical and physical data structures using ERWIN and MB MDR.

Nandhaka IT Solutions (Client: Molecular Health)

January 2023 – July 2023

Data Analyst

- Worked closely with the business analyst and data warehouse architect to understand the source data and warehouse needs.
- Designed star schema data models with dimensions and facts for efficient data analysis.
- Developed data analytics solutions leveraging Tableau and data warehouse solutions using Exadata, and Informatica.
- Implemented business intelligence reports and OLAP cubes using Tableau and Power Pivot.
- Ensured high availability, high performance, and risk minimization by proactively managing multiple environments.
- Built, published, and scheduled customized interactive reports and dashboards using Tableau.
- Involved in designing of star schema data model with dimensions and facts.
- Developed Tableau visualizations and dashboards from multiple data sources using data blending techniques.
- Performed functional, regression, and UAT testing for all reports.
- Documented all mappings, mapplets, and rules, handing over comprehensive documentation to the customer.
- Collaborated with business and technical teams to gather requirements for data quality rules and designed them using IDQ and other ETL tools.
- Executed data quality-specific ETL jobs, including address standardization, validation, email cleanups, name cleanup, and parsing.
- Document all mappings, mapplets, and rules in detail and hand over documentation to the customer.
- Collaborated with various business and technical teams to gather requirements around data quality rules and propose the optimization of these rules if applicable, then design and develop these rules with IDQ. Run data quality specific ETL jobs (address standardization and validation, email cleanups, name cleanup, parsing, etc.) Utilizing IDQ and other ETL tools, Tableau.
- Created action filters, parameters and calculated sets for preparing dashboards and worksheets in Tableau.

Data Analyst (Client : HSBC)

December 2020 – December 2022

- Created and analyzed business requirements to compose functional and implementable technical data solutions.
- Composed functional and technical data solutions based on business requirements.
- Participated in JAD sessions as a primary modeler to expand existing databases and develop new ones.
- Identified integration impact, data flows and data stewardship.
- Created new data constraints and or leveraged existing constraints for reuse.
- Created data dictionary, Data mapping for ETL and application support, DFD, ERD, mapping documents, metadata, DDL and DML as required.
- Anticipated JAD sessions as primary modeler in expanding existing DB and developing new ones.
- Evaluated and enhanced current data models to reflect business requirements.
- Generated, wrote and run SQL script to implement the DB changes including table update, addition or update of indexes, creation of views and store procedures.
- Consolidated and updated various data models through reverse and forward engineering.
- Compared different WFHM DB environments and determined, resolved and documented discrepancies.
- Analyzed DB discrepancies and synchronized the Staging, Development, UAT and Production DB environments with data models.
- Enhanced data models to reflect changing business requirements.
- Wrote and executed SQL scripts for database changes, including updates to tables, indexes, and stored procedures.
- Consolidated data models through reverse and forward engineering techniques.
- Resolved discrepancies and synchronized staging, development, UAT, and production environments.
- Used PowerDesigner to restructure logical and physical data models, ensuring data integrity.
- Reviewed and revised data models for soundness of data structures and adherence to client standards.
- Restructured Logical and physical data models to respond to changing business needs and to assured data integrity using PowerDesigner.

- Created naming convention files and co-coordinated with DBAs to apply the data model changes.

Data Analyst Intern

April 2020 – November 2020

- Extracted, manipulated, and queried large datasets in cloud environments (AWS, Azure, or Google Cloud), integrated with DevOps pipelines for automated data flows.
- Worked with Hadoop and Spark in project settings, utilizing DevOps tools like Jenkins and Docker for seamless deployment and scalability of data processing jobs.
- Created dashboards in Tableau and Power BI, integrating real-time system performance data from monitoring tools like Prometheus and Grafana, in collaboration with DevOps teams.
- Applied R for hypothesis testing and data modeling, collaborating with DevOps to optimize CI/CD pipelines based on data-driven insights.
- Leveraged advanced Excel features (formulas, pivot tables) to analyze project metrics, integrating data from DevOps tools (e.g., JIRA, GitHub) for workflow analysis.
- Utilized Python libraries (Pandas, NumPy, Matplotlib, Seaborn) for data cleaning, analysis, and visualization, automating data extraction from DevOps logs for system monitoring.
- Automated repetitive data tasks using Python scripts, working with DevOps teams to streamline data workflows and enhance pipeline efficiency.
- Analyzed and visualized trends in public datasets using Python and Tableau, collaborating with DevOps to visualize application performance metrics and identify bottlenecks.
- Applied machine learning techniques to predict system failures or performance issues, integrating them into proactive DevOps monitoring strategies.
- Partnered with DevOps engineers to build and maintain data-driven monitoring systems for continuous integration and continuous delivery (CI/CD) of data models and analytics applications.

Education

Indiana Wesleyan University
Master of Science in Data Analytics

August 2023 – December 2024
3.9/4 GPA
