

Suneela Paluru

Software Engineer

+1 931-546-9597 | suneela.p@ajobguide.com | Memphis, TN

SUMMARY

- Software Engineer with 3+ years of experience driving full-stack software development projects from conception to deployment, proficient in designing, developing, and implementing robust solutions that seamlessly integrate front-end and back-end components.
- Expert in crafting web solutions using tech stack including Java, JavaScript frameworks (React.js), backend frameworks (Spring Boot, Spring MVC), and DevOps tools (GraphQL, Docker, Jenkins) to cater to unique client requirements.
- Developing RESTful web services using Spring MVC to extract client data from databases seamlessly, enhance API uptime and test coverage using SOAPUI.
- Working with relational (MySQL, PostgreSQL) and NoSQL databases (MongoDB), and selecting the most suitable database type based on project requirements to ensure data storage, retrieval, and manipulation.

EDUCATION

Master in Computer Science: University of Memphis, Memphis, TN

Bachelor in Computer Science and Engineering: Kalasalingam Academy of Research and Education, Madurai, India

SKILLS

- **Methodologies:** SDLC, Agile/Scrum, Kibana
- **Languages:** Java, JavaScript, SQL
- **Frameworks/Libraries:** React.js, OAuth 2.0, GraphQL, Mockito, Hibernate, Junit
- **Spring Frameworks:** Spring Boot, Spring MVC, Spring Cloud, Spring Data JPA, Spring REST, Spring Security
- **J2EE Technologies:** Servlets, JSP, JSTL, JavaBeans, JDBC
- **Web Technologies:** HTML5, CSS3, JavaScript, Bootstrap5, jQuery, Ajax, JSON, XML, Redux, UI Frameworks
- **Cloud:** Google Cloud Platform (GCP), Amazon Web Services (AWS), Microsoft Azure
- **Database:** MySQL, PostgreSQL, MongoDB, Neo4j
- **Tools:** Maven, Gradle, Git, Jenkins, Google Kubernetes Engine (GKE), Docker, Kafka, Postman, Splunk AppDynamics

EXPERIENCE

Fifth third bank, TN | Software Engineer

Jan 2024 – Present

- Leveraged React's caching mechanisms to optimize data fetching for frequently accessed data from Java APIs, resulting in a 25% decrease in average page load time.
- Integrated Spring Data JPA with various databases (MySQL) to support data storage requirements.
- Architected and implemented microservices using Spring Boot for high scalability and fault tolerance, leveraging REST APIs and Apache Kafka for inter-service communication.
- Established a GraphQL API to query data from diverse sources efficiently, enabling real-time visualization of key metrics through integrated Grafana dashboards increasing data retrieval efficiency by 30%.
- Built RESTful APIs using Spring MVC and Spring WebFlux for efficient data communication between microservices and the front end, achieving a 30% increase in API request throughput.
- Implemented and maintained CI/CD pipelines using AWS CodePipeline, CodeBuild, and CodeDeploy, resulting in a 40% reduction in deployment time and a 50% increase in deployment frequency.

DXC Technology, India | Software Engineer II

Jan 2021 – Jul 2022

- Leveraged React's caching mechanisms to optimize data fetching for frequently accessed data from Java APIs, resulting in a 25% decrease in average page load time.
- Created reusable RESTful services using Spring REST for streamlined data access and manipulation, ensuring efficient interaction with various clients.
- Executed containerized applications on AWS EKS, achieving a 20% reduction in deployment times and optimizing resource utilization through scaling policies.
- Monitored application performance and issues using Splunk and AppDynamics, ensuring optimal system functionality and quick resolution of incidents.
- Automated Docker image builds and deployments using CI/CD pipelines (Jenkins), ensuring consistency and reducing deployment errors.
- Leveraged working with Google Kubernetes Engine (GKE), handling container orchestration and deployment processes to enhance application scalability and reliability.
- Collaborated with cross-functional teams in Agile and Scrum environments to meet project milestones and deliver robust solutions, reducing software bugs by 30% and application downtime by 40%.

Zensar Technologies, India | Junior Software Engineer

Jan 2020 – Dec 2020

- Designed and developed the end points (Controllers), business layer, and DAO layer using the Hibernate/JDBC template and spring IOC (Dependency injection).
- Developed 12 GraphQL schemas for 8 microservices, resulting in a 40% reduction in front-end development time due to standardized data access and reduced API complexity.
- Integrated JWT token handling with Spring Security's logout functionality to invalidate the token upon user logout and prevent unauthorized access.
- Established a highly scalable RESTful API using AWS API Gateway and Lambda functions for a Java application, handling concurrent requests per second.
