SUMMARY

Software Developer with experience building scalable backend systems and data pipelines using Python and AWS. Skilled in full-stack development, cloud-native technologies, and leveraging data to drive efficient and reliable solutions.

WORK EXPERIENCE

BNY Mellon (Contract) IN, USA
Software Developer Mar 2025 – Jun 2025

- Reduced trade-execution and reconciliation latency by optimizing SQL schemas, stored procedures and Python services, strengthening real-time transaction reliability and compliance checks.
- Expedited delivery of analyst dashboards by building secure, reusable React components and automating real-time data ingestion with Python and third-party APIs.
- Streamlined releases by implementing unit testing frameworks and integrating CI/CD pipelines (Jenkins, Git) improving code quality and reducing deployment time.

Purdue University IN, USA
Python Developer (Research Assistant) Sep 2024- Dec 2024

- Refined MongoDB queries and refactored Python data-access layers, reducing query time by Python data-access lay 50% (2 min to 1 min) and stabilizing APIs to handle 20+ RPS for a logistics/dispatch platform.
- Constructed serverless workflows with AWS Lambda, S3 and Python to automate ETL processes, enabling reliable monthly reporting and reducing manual effort for 50+ stakeholders.
- Developed automated data pipelines that integrated disparate datasets into Power BI, providing faculty and research teams with self-serve analytics dashboards for faster decision-making.

Dell Technologies TG, INDIA
Software Developer Feb 2021 - Nov 2022

- Conceptualized and implemented Django REST APIs with schema validation and JWT authentication, reducing latency by 0.5s per request and scaling to 10+ RPS in production.
- Programmed reporting pipelines by transforming 300+ datasets with Pandas and standardizing 100+ KPIs, exposed via Python APIs and Tableau dashboards, saving analysts 15+ hours/week.
- Accelerated predictive diagnostics by 6x and improved accuracy by refactoring TensorFlow pipelines, optimizing feature preprocessing and batch execution.
- Built and deployed DynamoDB-backed microservices with CI/CD (GitHub/Jenkins), reducing API response times by 0.3s and scaling user management to 50+ concurrent users.

Trigent Software TG, INDIA
Software Developer (Intern) July 2020 - Jan 2021

- Optimized SQL queries and implemented indexing strategies, reducing response times by up to 30 seconds across multiple enterprise web apps.
- Assisted in deploying an AWS Redshift warehouse and building ETL pipelines (Python + Pandas) to centralize and clean disparate datasets for analytics.
- Supported backend development with Flask REST APIs and designed PostgreSQL schemas/constraints, improving data integrity and reliability of daily transactions.

CERTIFICATIONS

AWS Certified Developer – Associate Aug 2025 - Aug2028
AWS Certified Cloud Practitioner Apr2025 - Apr 2028

EDUCATION

Purdue University Hammond, IN
MS in Computer Science (GPA: 3.6) Graduation Date: December 2024
Jawaharlal Nehru Technological University AP, India
Bachelors in Information Technology (GPA: 3.9) Graduation Date: June 2021

SKILLS

Languages: Python, SQL, JavaScript
Backend & APIs: Django REST Framework, Flask, RESTful Design, JWT Auth, Unit Testing, PostmanDjango REST Framework, Flask, RESTful
Frontend: React, HTML, CSS
Cloud & DevOps: AWS (Lambda, S3, EC2, Route 53, VPC), Serverless, CI/CD (Jenkins, GitHub Actions), Docker, Kubernetes, TerraformAWS (Lambda, S3, EC2, Route 53, VPC), Serverless
Data & ML: Pandas, ETL/ELT, TensorFlow, LangChain, OpenAI API, Hugging Face, Power BI, TableauPandas, ETL/ELT, TensorFlow
Databases: PostgreSQL, MongoDB, DynamoDB, Redshift (Query Optimization & Indexing), Vector DBs (Pinecone, FAISS)PostgreSQL, MongoDB, DynamoDB, Redshift (Query Optimization
Messaging & Workflow: SQS, SNS, Airflow, Kafka
