

Suprad Suresh Parashar

Tempe, AZ | (602) 552-2791 | suprad.s.parashar@gmail.com | github.com/suprad-parashar | linkedin.com/in/supradparashar

Full-stack developer with expertise in JavaScript, Python, and AWS, skilled in building scalable APIs, microservices, and cloud-based solutions. Experience in frontend frameworks like React.js, backend technologies including Spring Boot, and real-time data processing with Kafka. Awarded for innovation in AI-driven solutions, with a proven track record of optimizing systems and enhancing user experiences.

EDUCATION

Master of Science in Computer Science

Arizona State University

May 2025

4 / 4 GPA

Relevant Courses: *Software Design, Web Development Bootcamp, Cloud Computing, Software Security, Software Requirements*

Bachelor of Engineering in Information Science and Engineering

SJB Institute of Technology

July 2021

8.64 / 10 GPA

Relevant Courses: *Data Structures, Algorithms, Advanced Python Programming, Web Technologies, Computer Networks, OS, DBMS*

SKILLS

Programming Languages: JavaScript/TypeScript, Python, Java, Rust, Bash

Web Technologies: HTML, CSS, React.js, Redux, Node.js, Express.js, Socket.io, Flask

API and Other Tools: REST API, GraphQL, FastAPI, Figma, Git, Docker, Kubernetes, Terraform

Backend Frameworks and Libraries: Spring/Spring Boot, Android, Spark, Maven, Pillow, Tkinter, Grafana, Prometheus, Kafka

Databases and Cloud Technologies: SQL (MySQL, PostgreSQL), NoSQL (MongoDB, DynamoDB, Redis), AWS, Firebase

Testing Frameworks: React Testing Library, Cypress, Selenium, Jest, Enzyme

Machine Learning and Data Science: Numpy, Pandas, PyTorch, Tensorflow, Keras, Spark, Scikit-Learn

PROFESSIONAL EXPERIENCE

Software Development Engineer | Amazon | Bangalore, KA, India

March 2022 - March 2023

- Streamlined Lambda function management and automated deployments by designing a pipeline to consolidate multiple functions into a single package using Python and AWS, improving efficiency and scalability.
- Automated processing of 1.3 TB daily log data from internal APIs for the E-Commerce Team using Lambda and Spark, ingesting data into AWS S3 and Glue with optimized schema for training recommendation algorithms, reduced API calls by 20%.
- Designed and implemented 2 application UIs with React.js and Redux, enhancing user efficiency and experience and resolved 20+ complex issues, boosting system reliability and client satisfaction.
- Led prep for Prime Day, creating checklists and on-call rosters, coordinating with external teams to ensure system readiness and zero incidents, earning leadership recognition.

Software Engineer | 314e Corporation | Bangalore, KA, India

July 2021 - March 2022

- Took ownership of designing a CCD to FHIR healthcare message converter library in Python, processing 10000+ patient records, ensuring compatibility with industry standards.
- Developed a message routing microservice with Apache Camel, Kafka and Spring Boot, achieving a 20% reduction in processing time and demonstrating strong backend optimization skills relevant to high-performance SaaS product.
- Built a React app for visualizing live and historical routing data, incorporating Grafana for real-time monitoring and insights, showcasing frontend expertise and commitment to creating responsive, user-centered applications.
- Focused on testable and maintainable code in all modules, creating robust unit and integration test suites with UnitTest to ensure high coverage and system reliability.

Application Development Intern | Ritzzy Radio | Bangalore, KA, India

May 2020 - May 2020

- Designed and developed RESTful APIs using Java and Spring Boot to enable efficient data retrieval and manipulation, seamlessly integrating with Parse Servers to optimize application performance.
- Developed UIs using Java, Native Android and Jetpack Compose, optimizing performance across different screen sizes using Fragments and Activities.
- Designed and implemented notification services for real-time user alerts (e.g., post likes, comments), increasing user engagement with timely, relevant notifications.
- Integrated ExoPlayer for low-latency audio streaming on Parse Server, implementing efficient buffering techniques to enhance playback performance and reduce load times.

PERSONAL PROJECTS

Prepify: An LLM-Based Mock Interview Prep Assistant 🗨

September 2024

- Deployed a PaaS solution on AWS for a voice-based interview preparation platform, ensuring scalability and accessibility.
- Won the AI Innovation Award at the Sunhacks 2024 Hackathon for an innovative approach to interview preparation.
- Implemented WebSockets to communicate with back-end server, ensuring scalability and concurrency with multiple clients.
- Leveraged AWS Transcribe, Polly and ChatGPT to process Audio input and generate a response based on the user input.

Learn: An Educational Platform 🗨

May 2022

- Built an education platform on Web and Android for providing curated learning resources available on the internet.
- Integrated Firebase Authentication and Realtime Database for OAuth2 Authentication with four providers and user data storage.
- Designed scalable APIs and backend structures writing design docs to optimize API calls and enhance the user experience.

AWARDS AND ACHIEVEMENTS

- Won the AI Innovation Award for the "Prepify" project at Sunhacks 2024 Hackathon competing against 168 teams and 600 students.
- Clinched Third Place at the TCS Tech Bites 2020 Tech Quiz, Bangalore Region, out of 250+ teams across 150 colleges.
- Secured the Best Presentation Award for "Generation of Prime Numbers" at the 2nd Conference on Applied Mathematics at SJBIT.
