CLOUD ENGINEER | Intelligence Algorithms | GPU-Accelerated Computing | Advanced Algorithms | Cloud Deployment | Semiconductor Innovation | Debugging & Troubleshooting | High-Performance Software Solutions

Systems Software Engineer | Cloud& Distributed Systems | Performance Optimization

Education:

- Texas A & M University, Corpus Christi, TX: Masters in Computer Science May 2025
- Gitam University Hyderabad, India: Bachelor in Computer Science Engineering May 2023

Technical Skills:

- Programming Languages:** Python, Java, C, SQL | **Web Technologies:** React.js, HTML, CSS, JavaScript
- Database Management:** Oracle, SQL, MongoDB | **Cloud Computing:** Deployment, hosting solutions, AWS
- Software Development:** Version control (Git), API integration, Object-Oriented Programming (OOP), Kernel-Level Debugging
- Data Science & Analytics:** Machine Learning, Predictive Modeling, Data Visualization (Matplotlib, Seaborn, Tableau)
- Operating Systems:** Windows, Linux, macOS | **Networking:** Basic TCP/IP, DNS, Firewalls, Client-Server Architectures
- Interpersonal Skills:** Strong Internet Research, Excellent Verbal, Written, and Quantitative Skills, Time Management and Leadership

Work Experience

Front End Developer | Incrivelsoft, San Francisco, CA Nov 2024 - Feb 2025

- Developed a React.js front-end for a greeting app, increasing user interaction by 30% and enhancing the overall interface design
- Designed a responsive UI for an automatic messaging app, leading to a 25% boost in user engagement during special occasions
- Optimized cross-platform performance for WhatsApp and email using modern CSS frameworks, reducing load times by 40%
- Collaborated on UI/UX improvements, resulting in a 20% increase in user satisfaction and 15% higher app retention rates
- Enhanced visual and interactive elements, leading to a 35% improvement in overall user experience metrics and engagement levels

Machine Learning | Start-Tech Academy, India Feb 2023 - Apr 2023

- Developed a linear regression model to predict salary based on experience, improving predictive accuracy by 15% within 2 months
- Analyzed salary-experience trends, identifying a strong linear correlation that enhanced compensation insights for HR teams
- Applied analytical techniques to refine the salary prediction model, reducing prediction error by 10% in a short timeframe
- Optimized model parameters, increasing forecasting efficiency and improving salary estimation accuracy by 12%
- Provided data-driven insights to HR, contributing to more informed compensation decisions within a 2-month period

Academic Projects

Application of Artificial Intelligence Algorithms in Image Processing

- Researched & implemented generative models for image synthesis, enabling creation of realistic images from parameters or random noise
- Developed AI-driven techniques to enhance image generation, contributing to advancements in entertainment, design & virtual environments
- Explored innovative approaches in generative modelling, pushing the boundaries of image creation and driving industry transformation

Emotion-Based Adaptive Learning System for Personalized Paths

- Developed an emotion-based adaptive learning system to personalize learning experiences based on real-time emotional feedback
- Designed algorithms to analyze both immediate and long-term emotional responses, optimizing personalized learning paths
- Enhanced user engagement and learning outcomes by integrating adaptive techniques that adjust content based on emotional insights

Improving and Detecting Anomalies Using Isolation Forest

- Implemented Isolation Forest for anomaly detection, effectively identifying outliers without relying on predefined normal data distributions
- Optimized algorithm by refining individual tree decision processes & processing data in blocks, significantly enhancing efficiency & scalability
- Achieved a 40%-45% reduction in execution time compared to traditional Isolation Forest, improving anomaly detection speed & performance

Data Breach Avoidance Based on Honeytrap Strategy

- Developed a bank database manager with a honeytrap strategy to detect intruders, redirect threats & enhance security
- Built a dual-server architecture using Flask, MongoDB, Python, CSS & HTML, isolating original & honeytrap data
- Designed & integrated security algorithms to protect the back end, mitigating cyber threats & unauthorized access

Internet Radio Multicasting Multimedia Over IP

- Developed a client-server interaction system using TCP, enabling clients to request and select live-streaming stations dynamically
- Designed a broadcasting framework that ensures continuous content streaming, replicating traditional broadcasting systems
- Implemented dynamic stream management features, allowing users to pause, resume, switch stations, or terminate connections seamlessly
