

Java Full Stack Developer

PROFESSIONAL SUMMARY:

- Full Stack Java Developer with **4+ years of experience** building scalable, secure, cloud-ready applications using **Java 17, Spring Boot, React, and Angular**.
- Experienced in **microservices architecture, REST API development, and event-driven integration** using Kafka and RabbitMQ.
- Hands-on expertise with **Docker, Kubernetes, and AWS services**, focusing on automation, reliability, and zero-downtime deployments.
- Strong in **database design and performance tuning**, working with PostgreSQL, MySQL, MongoDB, Redis, and Cassandra.
- Skilled in **CI/CD pipelines** using Jenkins, GitHub Actions, and GitLab for fast, repeatable, and high-confidence deployments.
- Focused on writing clean, testable code with **JUnit, Mockito, and best engineering practices (TDD, Clean Code, SOLID principles)**.
- Front-end experience with **React/Angular, TypeScript, and responsive UI development**, ensuring smooth user experiences.
- Collaborative team player with strong problem-solving skills, experienced in **Agile/Scrum**, code reviews, and cross-team feature delivery.
- Demonstrated ability to integrate **frontend and backend systems** seamlessly, focusing on **performance, usability, and responsive design** across web and cloud-based applications.

TECHNICAL SKILLS:

Programming Languages	Core Java (OOP, Multithreading, Collections), Java 17/11/8, SQL, PL/SQL, TypeScript, Shell Scripts, Scala
Web Technologies	React.js, HTML5, CSS3, JavaScript (ES6+), AJAX, REST, JSON, XML, JAX-RS, JSP, Servlets, Bootstrap
Cloud & Devops	Kubernetes (ELK/AKS), Helm, GitHub Actions, GitLab CI/CD, AWS Lambda
Messaging/ Streaming	Apache Kafka, RabbitMQ
J2EE Technologies & frameworks	Spring Boot, Spring MVC, Spring Cloud, Spring Security, Spring Batch, Hibernate, JPA, Microservices Architecture, Node.js
API/ Integration	GraphQL Open API(Swagger 3)
Databases	MySQL, PostgreSQL, Oracle DB, MongoDB, Cassandra, PL/SQL
Application/Web Servers	Apache Tomcat, JBoss, IBM WebSphere, Oracle WebLogic
Caching & Performance	Redis
Methodologies	Agile, Scrum, Waterfall
Build & Containerization Tools	Maven, Jenkins, Docker, Kubernetes, Ant, CI/CD Pipelines
Testing Tools	JUnit, Mockito, Postman, Selenium, SOAP UI, JMeter, Grafana
Monitoring Tools	ELK Stack, Prometheus, Grafana, SonarQube
IDE	Eclipse, IntelliJ IDEA, Spring Tool Suite (STS), Postman, TOAD
Version Control Tools	Git, GitHub, GitLab, Bitbucket
Cloud Technologies	AWS (EC2, S3, RDS, Lambda, EKS), Azure (AKS, DevOps Pipelines), GCP

PROFESSIONAL EXPERIENCE:

Client: American Airlines, Dallas TX

SEP 2024 - Present

Role: Java Full Stack Developer

- Developed and enhanced **Spring Boot microservices** for core business modules, enabling faster and modular feature releases.
- Built UI components using **React, TypeScript, and Material UI**, improving usability and reducing page load times.

- Designed and consumed **REST APIs** for data processing, authentication, and dashboard workflows, integrating with internal and third-party services.
- Implemented **Redis caching and request-level optimization**, helping reduce latency and improving system response times.
- Integrated **Apache Kafka** for real-time event publishing and consumption, improving reliability of asynchronous workflows.
- Deployed services to AWS using **EC2, S3, RDS, and EKS**, ensuring scalability and secure cloud operations.
- Worked with **PostgreSQL and MongoDB**, performing schema updates, query optimization, and data consistency checks.
- Automated CI/CD pipelines using **Jenkins and GitHub Actions**, enabling smooth, repeatable deployments across environments.
- Contributed to **unit and integration testing** using JUnit and Mockito, increasing code coverage and reducing production defects.
- Collaborated with QA, DevOps, and Product teams in **Agile/Scrum**, participating in sprint ceremonies, backlog grooming, and release planning.

Environment: Java 17, Spring Boot, React, Kafka, Redis, PostgreSQL, MongoDB, Docker, Kubernetes, AWS, Jenkins, GitHub Actions, JUnit, Mockito

Client: Verizon, Irving, TX

July 2023 – September 2024

Role: Java Full Stack Developer

Responsibilities-

- Developed and supported **Spring Boot microservices** to handle high-volume transactions, improving scalability and reducing service latency.
- Designed and consumed **REST APIs and GraphQL APIs**, integrating them with front-end applications and external partner systems.
- Built responsive UI features using **React/Angular and TypeScript**, improving page load time and user interactions across modules.
- Implemented **Apache Kafka** for event-driven workflows, enabling reliable, asynchronous data processing between distributed services.
- Improved database performance using **PostgreSQL, Redis caching, and optimized SQL queries**, reducing API response time by up to **30–40%**.
- Containerized and deployed services using **Docker and Kubernetes (EKS/AKS)**, ensuring zero-downtime rollouts with Helm.
- Automated CI/CD pipelines using **Jenkins / GitHub Actions / GitLab**, adding checks for quality, tests, and vulnerability scans.
- Secured backend services with **Spring Security, OAuth2, and JWT-based authentication**, applying role-based access controls.
- Used **ELK, Grafana, and Prometheus** to monitor logs, metrics, and application health for proactive issue resolution.
- Followed **Agile Scrum**, participated in sprint planning, code reviews, and demo sessions, ensuring collaborative and on-time delivery.

Environment: Java 17, Spring Boot, React/Angular, Kafka, Redis, PostgreSQL, Docker, Kubernetes, AWS, Jenkins, GitHub Actions, JUnit, Mockito, ELK, Grafana

Client: Cisco, India

June 2021 – October 2022

Role: Java/J2EE Developer

Responsibilities:

- Delivered end-to-end features across **Java, Spring Boot, and Angular/React**, connecting UI workflows with secure backend services.

- Migrated legacy modules to **microservices architecture**, improving maintainability and reducing deployment dependencies.
- Integrated **Kafka and RabbitMQ**, supporting real-time messaging, event notifications, and fault-tolerant workflows.
- Enhanced data reliability by working with **MongoDB and Cassandra** for high-volume storage, backups, and scalable reads/writes.
- Built **reusable API components**, improving development speed and consistency across multiple teams and services.
- Strengthened observability by implementing **centralized logging, distributed tracing, and custom alerts**, reducing production incidents.
- Enabled automated deployments using **Docker, Kubernetes, and Jenkins**, speeding up delivery and reducing manual effort.
- Wrote **JUnit and Mockito tests**, increasing code coverage and improving long-term stability of critical services.
- Contributed to architectural discussions, reviewed pull requests, and guided junior developers in best coding practices.
- Collaborated with QA, DevOps, and Product teams to ensure smooth release cycles and predictable sprint outcomes.

Environment: Java 11, Spring Boot, Angular/React, Kafka, Cassandra, MongoDB, Docker, Kubernetes, Jenkins, Maven, JUnit, Mockito, Splunk, SonarQube
