

Supriya Koduru Cloud Engineer

supriya@jobhuntmails.com | (831) 383-6162 | USA | LinkedIn

Summary

Cloud Engineer with 4+ years of experience in designing, automating, and securing cloud infrastructure across AWS and Azure environments. Proficient in Infrastructure as Code, scripting, and CI/CD automation to drive scalable and efficient deployments. Skilled in cloud networking, cost optimization, and monitoring solutions. Strong understanding of security best practices, access controls, and system performance tuning. Adept at cross-functional collaboration, troubleshooting complex systems, and delivering high-availability solutions in fast-paced, enterprise-grade environments.

Technical Skills

- **Cloud Platforms:** AWS (EC2, RDS, EKS, S3, IAM, Transit Gateway, PrivateLink, Control Tower, Organizations, SCPs, CloudWatch, Config, SNS, OpenSearch), Azure (AKS, Virtual WAN, ExpressRoute, Network Watcher, Traffic Analytics, Application Gateway, Azure Monitor, Function Apps, Storage, AD, PIM)
- **Infrastructure as Code:** Terraform, Bicep, ARM Templates
- **Automation & Scripting:** Python, Bash, Azure Functions, Logic Apps
- **DevOps & CI/CD:** Blue-Green Deployments, AMI Creation, Cost Tagging, CI/CD Integrations
- **Monitoring & Analytics:** Amazon OpenSearch, AWS CloudWatch, AWS Config, Azure Monitor, Power BI
- **Security & Access Control:** IAM, RBAC, JIT Access, Azure AD, SCPs
- **Networking:** AWS Transit Gateway, AWS PrivateLink, Azure ExpressRoute, Azure Virtual WAN, VPN Gateways, Load Balancers, NSG
- **Collaboration & Documentation:** Confluence, Power BI, Technical Audits, Architecture Documentation

Professional Experience

Cloud Engineer, Wealthfront

10/2024 – Present | Remote, USA

- Designed and implemented a secure and scalable cloud infrastructure to support Wealthfront's automated investment platform, focusing on high availability, compliance, and cost-efficiency in AWS.
- Architected a multi-account AWS landing zone using AWS Control Tower and Organizations, enabling granular policy enforcement via Service Control Policies (SCPs) and improving governance across development, QA, and production environments.
- Built reusable and parameterized Infrastructure as Code (IaC) modules using Terraform to provision core infrastructure components (VPCs, EKS clusters, RDS, IAM roles), reducing manual provisioning time by 70%.
- Implemented secure networking with AWS Transit Gateway and PrivateLink to ensure encrypted, low-latency communication between microservices and third-party financial APIs.
- Developed Python and Bash automation tools for CI/CD pipeline integrations, including blue-green deployment, AMI creation, and cost tagging, reducing release cycle time and manual errors.
- Centralized monitoring and alerting using Amazon OpenSearch, CloudWatch, AWS Config, and SNS, enabling real-time detection of anomalies and improving incident response times.
- Reduced AWS operational costs by 35% through automated instance right-sizing, reserved instance planning, and S3 intelligent tiering for historical financial data.

Cloud Engineer, Tata Communications

01/2021 – 07/2023 | Tamil Nadu, India

- Designed and implemented a scalable cloud network automation project to support Tata Communications' global SD-WAN and hybrid cloud offerings for enterprise clients across APAC and EMEA regions.
- Automated deployment and monitoring of virtual network appliances (firewalls, load balancers, VPN gateways) on Azure using Infrastructure as Code (IaC) with Terraform and Bicep, ensuring zero-touch provisioning for over 200 client environments.
- Integrated Azure Network Watcher, Traffic Analytics, and Application Gateway diagnostics with Tata's centralized NOC dashboards to provide end-to-end visibility and intelligent traffic routing using custom Logic Apps and Azure Monitor alerts.
- Streamlined edge-to-cloud connectivity using ExpressRoute and Azure Virtual WAN, applying automated routing policies based on client-specific SLAs and reducing latency by 35% across distributed branch networks.
- Developed event-driven automation using Python and Azure Functions to auto-remediate network issues like misconfigured NSGs, peering failures, or high-latency links, improving MTTR by 40%.
- Worked with the Managed Services team to implement Just-in-Time (JIT) access and RBAC policies via Azure AD and PIM for NOC and client support teams, enhancing access security and compliance tracking.
- Collaborated on quarterly client reviews and technical audits by maintaining detailed network architecture documentation in Confluence and integrating incident metrics into Power BI reports for leadership and clients.

Associate Cloud Engineer, Tata Communications

01/2020 – 12/2020 | Tamil Nadu, India

- Assisted in deploying a containerized internal knowledge portal using Azure Kubernetes Service (AKS), improving collaboration among engineering teams while integrating Azure Monitor for centralized health and performance logging.
- Automated provisioning of Azure Storage and Function Apps using ARM templates to support internal tools, reducing manual setup time by 70% and enabling faster iteration cycles for the development teams.

Education

Yeshiva University, New York, NY, USA

Master of Engineering in Cybersecurity

08/2023 – 05/2025

SASTRA University, Tamil Nadu, India

Bachelor of Technology in Computer Science and Engineering (CSE)

07/2016 – 05/2020
