

Supriya Besam

Jersey City, New Jersey, 07307. || supriyabesam05@gmail.com || (513) 764-6071

PROFESSIONAL SUMMARY

Full-Stack Software Developer with 4+ years of experience designing and implementing scalable web and data-driven applications across telecommunications, e-commerce, and banking domains. Skilled in Python, Java, Spring Boot, React, SQL/NoSQL databases, and cloud platforms. Experienced in building ETL pipelines, RESTful APIs. Adept at unit and integration testing, Agile collaboration, and delivering high-quality, maintainable software that improves operational efficiency and provides actionable business insights.

TECHNICAL SKILLS

- **Languages** : Java , Python, SQL, HTML 5, CSS 3 , JavaScript.
- **Testing Tools** : Junit, Mockito, Spring Test Framework
- **Computing Domain** : Object Oriented Programming, Database Management System, Data Structures and Algorithms, Software Testing and Validation.
- **Databases** : MySQL, DynamoDB.
- **Cloud** : AWS
- **Frameworks** : React.js.
- **Databases** : MySQL.
- **Development Tools.** : Jenkins, CI/CD Pipelines
- **Other Skills** : Scrum, Git, Apache Spark, Microsoft Office, MATLAB, Data Mining.

WORK EXPERIENCE

CVS Health

Remote, NJ

Software Engineer

01/2024 – Present

- Designed and developed Java Spring Boot microservices to process large volumes of pharmacy billing and prescription data, integrating securely with patient and insurance systems through REST APIs.
- Improved backend performance by optimizing SQL Server data models and stored procedures for prescriptions, claims, and patient profiles reducing query times by around 40% and enhancing data accuracy.
- Built scalable backend workflows to automate key healthcare operations, including prescription validation, claim reconciliation, and refill tracking.
- Created unit and integration tests with JUnit and Mockito, increasing test coverage above 85% and preventing recurring production issues.
- Developed React.js dashboards using Hooks and reusable components to display real-time insights on refill rates, pharmacy inventory, and patient adherence.
- Collaborated through Git and GitHub using feature branches, code reviews, and pull requests as part of Agile sprints delivering biweekly releases.
- Automated CI/CD pipelines with Jenkins and AWS Code Pipeline, deploying seamlessly to EC2 and S3 and cutting manual release efforts by about 60%.

Amazon

New York, NY

Software Development Engineer

10/2022 – 12/2023

- Contributed to the design and implementation of CAIRE, an internal system automating the transformation of metrics into actionable recommendations using Scala, Java for internal and external users.
- Orchestrated data generation for CAIRE, applying inference and metric analysis within an advertiser context, delivering monthly recommendations that yielded 2 key insights for account managers.
- Designed, implemented, and maintained CI/CD pipelines using AWS CodePipeline and CodeDeploy, streamlining deployments and improving release speed and consistency.
- Leveraged AWS Glue, Lambda, S3, and Redshift to optimize data handling, storage, and transmission, reducing processing time by 50% and enhancing scalability by 30%.
- Utilized Apache Spark with AWS EMR for advanced debugging, troubleshooting, and performance optimization, improving efficiency of large-scale data analysis tasks.
- Performed load testing with Hydra on AWS ELB, improving system throughput by 20% and identifying bottlenecks under peak load.

- Monitored application performance and AWS resource utilization with CloudWatch, implementing optimizations that reduced latency by 30% (500ms → 350ms) and lowered infrastructure costs.
- Developed automated Python + Pandas scripts for data cleaning and preprocessing, scheduled via cron jobs, ensuring timely and accurate data availability.
- Designed and documented RESTful APIs with Swagger, integrating it with back-end frameworks and using it for validation and testing.
- Contributed to UI development using ReactJS and TypeScript, while also designing both front-end and back-end of a Python Flask admin application.
- Conducted unit and integration testing with JUnit and Mockito, achieving 90% coverage and enhancing quality and security.
- Responded to high-severity incidents with same-day resolutions and implemented preventive mechanisms to ensure long-term system resilience.

Accenture

Bangalore, KA

Application Associate Developer

05/2020 – 08/2021

- Developed and deployed banking applications using Java, Spring Boot, delivering secure and reliable solutions for account management and transaction processing.
- Built responsive web pages with HTML, CSS, JavaScript, and JavaScript, improving user experience and usability across customer-facing portals.
- Implemented unit and integration testing with JUnit and Mockito, achieving high code reliability and reducing production issues.
- Debugged and resolved technical issues across Java microservices and front-end modules, improving application stability and reducing downtime.
- Designed and implemented RESTful API endpoints for data retrieval, submission, and updates, enhancing system functionality and reliability.
- Utilized Swagger to validate API responses, quickly detecting and resolving code issues to maintain high-quality deliverables.
- Collaborated with product managers and business analysts to translate banking requirements into scalable technical solutions, adhering to compliance and regulatory standards.

EDUCATION

- **University of Cincinnati** Cincinnati, OH
Master of Science in Information Technology Aug 2021 - Aug 2022
- **G. Narayanamma Institute of Technology and Science** Telangana, India
B. Tech in Electronics and communication Engineering Aug 2016 – May 2020
