PROFESSIONAL SUMMARY

Data Scientist with 3+ years of experience in insurance, healthcare, and cloud analytics. Skilled in building fraud detection, underwriting, and forecasting models using Python, R, and ML techniques. Proficient with Snowflake, Databricks, AWS, and PySpark for scalable pipelines. Delivered 22% lift in model accuracy, reduced reporting delays by 35%, and cut decision times by 60%. Experienced in dashboards (Power BI, R/ggplot2) and AI solutions (RAG/vector search) to improve compliance, risk, and operational efficiency.

TECHNICAL SKILLS

Programming Languages:	Python, R, SQL
Statistical & Machine Learning:	Supervised/Unsupervised Learning, Regression, Classification, K-Means, HDBSCAN, Time Series Forecasting, Statistical Inference, Pipeline Automation (scikit-learn, MLflow)
Deep Learning & NLP:	PyTorch, TensorFlow, Hugging Face Transformers, OpenAI GPT-4 Mini, Semantic Search, Metadata Extraction, RAG
Data Visualization & BI:	Power BI, Tableau, Matplotlib, Seaborn, Plotly
Data Engineering & Automation:	ETL Pipelines, Data Wrangling, SQL Optimization, Batch Processing, Data Validation
MLOps & Cloud Platforms:	AWS (S3, EC2, SageMaker, Redshift), MLflow, Git, GitHub
Containerization & Orchestration:	Docker, Kubernetes (basic), Amazon ECS, Amazon EKS (intro)
Tools & Development Environments:	Jupyter, VS Code, Linux Shell, Airflow (basic), Streamlit

WORK EXPERIENCE

Data Scientist | Cloud Integrator, VA, USA

August 2025 – Present

- Integrated predictive models with Snowflake and Databricks, reducing reporting delays by 35% and delivering real-time dashboards for compliance and executive teams.
- Built a RAG proof-of-concept using vector databases, boosting client support response accuracy by 22% and laying groundwork for enterprise-wide AI adoption.

Data Scientist | Berkshire Hathaway, NE, USA

May 2024 – May 2025

- Built claim-fraud and underwriting risk models (XGBoost/LightGBM) across auto & P&C lines; lifted AUC by 22%, routed high-risk claims/policies to SIU/underwriter review, cutting claim leakage by \$4.3M+ and improving loss ratio by 110 bps.
- Architected low-latency scoring on AWS (Lambda, SageMaker, S3 events) for quote, bind, and First Notice of Loss (FNOL) flows; reduced quote-to-bind decision time by 60% and supported millions of daily quote/claim events with sub-100 ms p95 latency.
- Implemented Retrieval-Augmented Generation (vector search + LLMs) over policy wordings, endorsements, and adjuster notes; standardized coverage determinations and trimmed adjuster lookup time 30%, boosting first-touch resolution.
- Delivered dashboards in Power BI, R/ggplot2 tracking combined ratio, loss & LAE trends, catastrophe/reinsurance exposure, and NAIC RBC metrics; adopted by underwriting, actuarial, and compliance for quarterly portfolio reviews.
- Developed frequency/severity and loss-reserve forecasting in Python/R (GLMs/GBMs with exposure, seasonality, catastrophe flags); improved forecast MAPE by 18% across top lines and informed rate filings, reserve adequacy, and SIU staffing.

Data Scientist | Sigma Infosolutions, Bangalore, India

August 2021 – July 2023

- Orchestrated predictive modeling for medication adherence over a 4M+ patient dataset using logistic regression, random forests, and GBMs; insights from this model drove hyper-targeted intervention campaigns, lowering non-compliance rates by 22%.
- Designed and deployed an NLP pipeline using NLTK and rule-based parsers to extract structured signals from 500K+ patient support transcripts, reducing duplicate complaints by 17% and refining training modules for care agents.
- Built scalable ingestion frameworks using PySpark and SQL, automating data pulls from 10+ EHR, CRM, and prescription systems—improving data freshness by 65% and eliminating manual reconciliation overhead.
- Conducted unsupervised churn analysis using K-Means clustering and PCA, uncovering behavior segments that led to a revamped outreach strategy, increasing average lifetime value (LTV) by 10%.
- Migrated fragmented reporting pipelines to Snowflake and BigQuery, optimizing SQL jobs and warehouse compute usage—cutting ETL runtimes by 40% while halving cloud cost footprint.

EDUCATION

Masters in Data Science, Monmouth University, New Jersey, USA | GPA: 3.97

August 2023 – May 2025

Bachelor in Computer Science Engineering, GITAM University, Andhra Pradesh, India | GPA: 3.6/4.0

June 2019 – May 2023

CERTIFICATIONS

- AWS Certified Machine Learning Engineer** – Associate
- Hands-On Essentials: Data Warehousing Workshop** – Snowflake
- Introduction to Artificial Intelligence (AI)** – Coursera
- Introduction to Big Data with Spark and Hadoop** – Coursera
