

Sushil Gorantala | Data Analyst

AL, USA | +1 (205) 649-0350 | sushil.gorantala08@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with **3.5 years of experience** delivering analytics solutions across healthcare, e-commerce, and retail sectors. Skilled in building interactive dashboards (Power BI, Tableau), automating ETL pipelines in Python and Power Query, and optimizing SQL queries for large-scale datasets in AWS S3, SQL Server, MySQL, and PostgreSQL. Experienced in statistical modeling, forecasting, and fraud detection using SAS, JMP Pro, and Python. Adept at collaborating with cross-functional teams to align analytics with business goals while ensuring compliance with HIPAA and security protocols.

TECHNICAL SKILLS

Data Analysis & Manipulation: Python (Pandas, NumPy), SAS, JMP Pro
Database Querying & SQL: PostgreSQL, MySQL, CTEs, window functions, joins
Business Intelligence Tools: Power BI (DAX, Power Query), Tableau (interactive dashboards, drilldowns)
Spreadsheet & Office Productivity: Excel (Pivot Tables, VLOOKUP, Charts, Macros), PowerPoint
Data Cleaning & Transformation: Python (Pandas), SQL (CASE, CAST, COALESCE), Power Query
Statistical Analysis: Descriptive statistics, hypothesis testing, correlation, regression (Python/SAS)
Data Visualization: Tableau, Power BI, Matplotlib, Seaborn
Version Control & Collaboration: Git, GitHub, Jira
Cloud & Environments: AWS (S3, EC2), Windows, Linux
Web Development for Data Interfaces: JavaScript, React.js, HTML5, CSS3

WORK EXPERIENCE

Cardinal Health, USA Jan 2025 – Current
Data Analyst

Project: Healthcare Claims Data Modernization

- Built Power BI dashboards integrating AWS S3 claims data with SQL Server, enabling healthcare executives to monitor utilization trends and reduce processing delays by 15% through real-time KPI tracking.
- Automated ETL workflows in Python Pandas and Power Query, processing millions of records daily, cutting manual intervention by 40% and ensuring timely updates for member eligibility and claims validation.
- Created advanced SQL queries with CTEs, window functions, and joins to support fraud detection analytics, improving accuracy of high-risk claim flagging by 22% for compliance teams.
- Conducted regression and hypothesis testing in SAS and Python to evaluate provider performance metrics, enabling targeted interventions that reduced readmission rates by 8% within pilot programs.
- Managed Jira-based sprint planning and GitHub version control, collaborating with BI developers, data engineers, and compliance officers to deliver analytics solutions aligned with HIPAA and internal security protocols.

Hexaware, India Jul 2021 – Jul 2023
Data Analyst

Project: E-Commerce Sales Intelligence Platform

- Developed Tableau dashboards with interactive drilldowns to analyze product sales, boosting conversion rates by 12% through region-specific marketing recommendations backed by trend and customer segmentation analysis.
- Optimized SQL queries in MySQL and PostgreSQL for large transactional datasets, reducing dashboard load times by 35% and enabling near-real-time insights for merchandising teams.
- Built Python Pandas data pipelines to clean and enrich supplier and customer datasets, increasing reporting accuracy and reducing reconciliation time for monthly business reviews by 30%.
- Designed forecasting models in JMP Pro, applying regression and correlation analysis to predict seasonal demand, helping procurement teams reduce stockouts and overstocks by 18%.
- Coordinated cross-functional workshops with marketing, supply chain, and IT teams to align KPI tracking and dashboard development with evolving business goals and operational priorities.

Hexaware, Bangalore, India Jan 2021 – Jul 2021
Data Analyst Internship

Project: Retail Customer Analytics Dashboard

- Created Excel pivot-based dashboards with macros for automated weekly sales tracking, saving 12 hours per month in manual reporting for client retail chains.
- Supported Power BI dashboard development by preparing datasets in Power Query and implementing DAX measures for profitability analysis, enhancing executive decision-making efficiency.
- Wrote SQL scripts using CASE, CAST, and COALESCE to clean customer demographic data from multiple sources, improving data quality for targeted marketing campaigns.
- Visualized customer purchase behaviors in Python Matplotlib and Seaborn, identifying high-value customer segments for loyalty program targeting.
- Documented project workflows in GitHub repositories, ensuring smooth handover and knowledge continuity for incoming analysts and development teams.

EDUCATION

Master of Science in Data Science May 2025
University of Alabama at Birmingham (UAB), USA

Bachelor of Technology in Electronics and Communication Engineering May 2021
SR Engineering College, India

CERTIFICATION

- Microsoft Certified: Azure Fundamentals (AZ-900)**
- Data Science Orientation – Coursera**
- Introduction to IoT and Embedded Systems – University of California, Irvine (Coursera)**
- IoT Bootcamp – Centre for Development of Advanced Computing (C-DAC)**
- Git and GitHub – Coursera**
