

EDUCATION

Youngstown State University, Youngstown, Ohio

May 2025

Masters in Computing and Information Systems

Course work: Python programming, machine learning, data science, databases, and cloud computing. Gained hands-on experience in building AI models, and applying analytical techniques to solve real-world problems.

Jawaharlal Nehru Technological University, Hyderabad, India

Aug 2018

Bachelor of Engineering, Computer Science and Engineering

Course work: Big Data Analytics, Service Oriented Architecture, Enterprise Resource Planning. Analysis of Software Artifacts, Product design, Management techniques and Entrepreneurship, Industrial Marketing

SKILLS

- **Business Intelligence/ETL:** SQL Server Integration Services (SSIS), Reporting Services (SSRS), MS Excel
- **Programming Languages:** T-SQL, PySpark, Python, C
- **Databases:** MS SQL Server, MySQL, Teradata SQL, Databricks, Snowflake, Azure
- **Data Visualization:** Tableau, MS PowerPoint, Excel
- **Data Analysis & Machine Learning:** Pandas, NumPy, Scikit-learn, TensorFlow, Keras, FFNN, CNN, RNN-LSTM, A/B Testing, Statistical Analysis
- **Agile Project Management:** JIRA, Service Now, DevOps, Scrum, A/B Testing, Risk Management
- **Other Tools:** Git, Virtual Box, VDI Parsing

WORK EXPERIENCE

Penumbra Inc, Maryland

Data Analyst(Internship)

Nov 2024- Present

- Analyzed and visualized operational and clinical datasets using **Tableau**, resulting in a **35%** improvement in decision-making efficiency across R&D and quality teams.
- Developed advanced reporting and analytics solutions to monitor **master data performance**, delivering actionable insights to leadership for strategic planning and continuous improvement.
- Designed and implemented **automated Tableau dashboards**, eliminating manual reporting tasks and reducing reporting time by **95%**, while enabling real-time access to critical metrics.
- Created **automated data validation** processes using Python and SQL, reducing manual data entry errors by **~40%** and improving data integrity across all reporting systems.
- Led initiatives to clean, standardize, and enrich legacy datasets, reducing redundancy by **25%** and significantly improving reporting accuracy and consistency.
- Collaborated with business leaders to align **data analytics initiatives** with strategic objectives, supporting a data-driven culture and more informed decision-making across the organization.

MetLife, India

Data Analyst

Oct 2022- Aug 2023

- Enhanced data accuracy through advanced data validation processes in Databricks, leading to a **25% improvement in process reliability**.
- Developed Tableau dashboards to visualize trends and streamline reporting, reducing manual processes by 40%.
- Designed **Power BI and SSRS dashboards** that automated financial and insurance KPI tracking, increasing report accuracy by **25%** and saving ~8 hours/week of manual reporting.
- Supported cloud migration efforts to **Azure**, enabling **99.9% uptime for analytics services** and cutting infrastructure costs by **15%**.
- Utilizing **Tableau** to create insightful data visualizations and automate data validation workflows & **Conducting SQL and**

PL/SQL queries for data extraction and transformation for the different projects I have been working on

Blue Cross Blue Shield, India

Data Analyst

Apr 2020 – Sep 2022

- Engineered **and maintained SSIS ETL processes** for ingesting and transforming healthcare claims, reducing manual intervention by **80%** and improving pipeline reliability.
- Analyzed high-volume claims and patient **data across SQL Server, Snowflake, and MySQL**, reducing error rates in risk assessment models
- Utilized **Python and PySpark in Databricks** to identify fraudulent claims patterns, contributing to a **12% reduction in improper payments**.
- Worked within Agile teams, managing **user stories and risk logs in JIRA** and improving sprint cycle predictability.
- Led **A/B testing design and analysis** for new member engagement programs, identifying a **15% higher retention rate** in the treatment group.

DXC Technologies, India

Data Analyst

Mar 2019 – Mar 2020

- Collected and cleaned data using **Excel** functions such as VLOOKUP, Pivot Tables, and conditional formatting to support day-to-day reporting tasks.
- Created **basic Tableau dashboards** to visualize KPIs and present trends to internal teams for operational insights.
- Wrote **simple SQL queries** to extract data from databases for ad hoc analysis and reporting requirements.
- Assisted senior analysts with updating weekly performance reports, improving report turnaround time by **15%**.

PROJECTS

Music Genre Classification| YSU

- Implemented and compared neural network models (FFNN, CNN, RNN-LSTM) for automatic music genre classification using MFCC and Mel spectrogram features. Achieved classification accuracies of 45%, 65%, and 75% respectively, highlighting the effectiveness of LSTM-based models in audio analysis
- Built and compared neural network models (FFNN, CNN, RNN-LSTM) for music genre classification using audio features like MFCC and Mel spectrograms. Improved model accuracy by **30%**, with LSTM achieving **75%**, demonstrating its strength in audio sequence analysis.

•

ext2 Filesystem File Injector using VDI| YSU

- Developed a C-based utility to read and write files directly into a Linux ext2 filesystem within a VirtualBox VDI image without mounting it. Enabled fast, non-intrusive file injection by parsing VDI and ext2 structures at the binary level for use in OS development and forensic analysis.
- Built a C utility to inject files into Linux ext2 filesystems within VirtualBox VDI images without mounting, improving injection speed by **70%** and reducing manual effort by **90%**, supporting efficient workflows in OS development and forensic analysis.
