

Sushma Gandham

Software Developer | 3+ YOE | Java, Spring Boot, AWS, Azure, LLMs | 2nd Place – Microsoft Innovation Challenge | Ex-Accenture

📞 8136069974 ✉ sushmagandham444@gmail.com 🌐 [sushmagandham](https://sushmagandham.com)

SUMMARY

Results driven Backend Developer with 3+ years' experience specializing in Java, Spring Boot, Microservices, and AWS/Azure cloud deployments. Expert in building and optimizing scalable, high-availability systems for global enterprises, including Accenture (AT&T). Skilled in CI/CD, REST API design, production troubleshooting, and leading end-to-end backend solutions. Strong advocate for clean code, automation, and operational excellence.

EDUCATION

Master of Science, Computer science

AUG 2023-MAY 2025

University of South Florida, Tampa, FL

- GPA: 3.45/4.0
- Course Work: Intro to theory of Algorithms, Operating Systems, Deep Learning, Security and Privacy in ML, Social Media Mining, Affective Computing.

Bachelor of Technology, Computer science and Engineering

JUN 2017-MAY 2021

Vel Tech Rangarajan Dr. Sagunthala Institute of Science and Technology, Chennai, INDIA

- GPA- 3.65/4.0
- Course Work- Data structure and algorithms, Database management systems, Operating systems, Java programming, Web technologies, Computer networks, Internet of Things.

PROFESSIONAL EXPERIENCE

ACCENTURE SOLUTIONS PVT LTD., Bengaluru, India

JUN 2021-AUG 2023

Client: AT&T | Role: Backend software developer | Promotional Content Delivery Platform

- Developed and enhanced Spring Boot microservices using Java, J2EE, and REST APIs for AT&T's internal promotional content delivery platform, enabling streamlined content distribution via E-mail, Web, and Messaging channels.
- Engineered and deployed backend services on Azure using Jenkins CI/CD pipelines, implementing a Microservices Architecture for high availability, fault tolerance, and rapid feature delivery.
- Wrote high-quality core Java code applying OOP design patterns, ensuring code reliability and maintainability within Agile, Scrum-driven teams.
- Integrated PostgreSQL for efficient data management and retrieval, and optimized complex queries to improve response time.
- Debugged and resolved critical production issues using Splunk and AppDynamics, improving system stability and minimizing downtime.
- Participated in system design and architecture discussions to develop robust, scalable backend solutions capable of handling high campaign traffic volumes.
- Conducted integration, unit, and functional testing using JUnit and Test-Driven Development (TDD) principles, partnering with QA to deliver high-quality software.
- Collaborated with frontend developers working in Angular and integrated backend APIs to support dynamic, cross-channel campaign rendering.
- Utilized Git for version control; interpreted frontend specifications from Figma to align backend APIs with UI requirements.

ATS GLOBAL TECHNOFT PVT LTD., Bengaluru, India

JUL 2020 -MAY 2021

Role: Java Developer

- Designed and developed 20+ RESTful APIs using Java and Spring Boot, enabling automated invoice generation and supporting in daily transaction volume.
- Built scalable microservices architecture processing over 50K invoices per day, ensuring high availability and seamless integration with React front-end and MongoDB.
- Automated cloud infrastructure provisioning with Terraform and managed deployments on AWS (Lambda, ECS) using robust CI/CD pipelines (Git, Jenkins, Maven, Docker).
- Implemented end-to-end CI/CD pipelines to accelerate delivery cycles and maintain continuous integration, driving faster feature releases and improved deployment efficiency.

- Ensured system reliability and performance through comprehensive JUnit testing, proactive monitoring (Splunk, AppDynamics), and rapid incident response, reducing downtime.
- Streamlined backend data processing and manipulation in Spring Boot and relational databases (SQL and NoSQL), achieving fault tolerance, high performance, and optimized data workflows.
- Supported deployment and orchestration of Docker and Kubernetes based microservices in production environments, ensuring high availability and effortless scaling.
- Collaborated on backend system design and architecture improvements to enhance scalability, reliability, and maintainability.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals
- Infosys Certified Software Developer – Infosys
- Udemy: Introduction to Cloud Computing, Docker & Kubernetes: The Practical Guide

TECHNICAL SKILLS

- **Languages:** Java (Spring Boot, Microservices), Python, SQL, HTML/CSS, JavaScript
- **Cloud/DevOps:** Azure, AWS (Lambda, ECS), Terraform, Jenkins, Git
- **Frameworks/Tools:** J2EE, REST APIs, JUnit, Maven, Splunk, JIRA, Confluence, Postman
- **Tools & IDEs:** IntelliJ IDEA, Visual Studio Code (VS Code), Google Colab
- **Databases:** PostgreSQL, DynamoDB, MongoDB
- **AI & ML:** LLMs, Prompt Engineering, NLP, BERT, PyTorch, Scikit-learn, Azure OpenAI, Azure AI Search, Data Preprocessing
- **Containerization:** Docker, Kubernetes

PROJECTS

[Twitter Disaster Classification using ML & DL](#) | University of South Florida

- Developed a tweet classification system to identify disaster-related content using both ML (SVM, Naive Bayes, XGBoost) and DL (CNN, GAN, BERT) models.
- Achieved 83% accuracy and 84.7% precision by fine-tuning a BERT-based Transformer model using Hugging Face.
- Led optimization of XGBoost and Gradient Boosting, outperforming other traditional models with up to 78% accuracy.
- Applied advanced preprocessing (stemming, tokenization, noise removal) to clean informal Twitter data for reliable model training.
- Contributed to a fully reproducible ML pipeline using Python, Scikit-learn, and PyTorch; hosted on GitHub for transparency and reuse.

[Facial Expression Recognition with CK+ Dataset](#) | University of South Florida

- Built a facial expression classification system using the CK+ dataset to recognize emotions from static facial images.
- Designed and evaluated a CNN-based system for emotion recognition using the CK+ dataset, applying principles of model architecture, testing, and performance tuning. Demonstrated ability to build production-grade ML pipelines with PyTorch and Python.

Hackathons & Competitions

- **Microsoft Innovation Challenge – June 2025(2nd Place Winner)**
contributed to [HeirAid](#), an AI-powered legal chatbot for property law in Georgia. Implemented backend services using Python microservices and integrated Azure Maps to visualize high-risk parcels. Leveraged Azure AI Search and OpenAI for RAG-based document querying, improving accessibility of legal insights for underserved communities.
