Summary

Enthusiastic and results-oriented Data Scientist with a strong foundation in analysis, machine learning and statistical modelling. Proven track record in building end-to-end ML pipelines, fraud detection systems, and churn prediction models. Skilled in Python, SQL, and cloud technologies (GCP), with a focus on delivering scalable, data-driven solutions that drive measurable business outcomes.

Technical Skills

- **Primary:** Python (incl. Scikit-learn/NumPy), GCP (Vertex AI, Dataflow, BigQuery), Git, CI/CD, SQL, Tableau
- **Experimentation:** A/B Testing, Statistical Analysis, Product Sense
- **LLMs & NLP:** Fine-tuning, Prompt Engineering, Model Deployment

Experiences

Data Scientist, Product/Risk – PY Data Solutions Inc, California

Sep'23 – Feb'24

Client - Walmart:

- Developed and deployed a Modular Microservices-Based ML Pipeline using LightGBM with hyperparameter tuning, integrated with a CI/CD-enabled batch orchestration framework. This solution improved fraud detection accuracy by 20%+, leading to a \$600K reduction in losses.
- Automated daily fraud detection workflows, eliminating manual review cycles and enabling consistent identification of high-risk marketplace sellers. Designed dashboards to track emerging fraud trends and provided strategic insights to senior leadership.
- Developed detection logic in BigQuery using stored procedures, successfully identifying and flagging fraudulent 1P/3P sellers. The system reversed a 3% chargeback spike and achieved a 30%+ fraud resolution rate.

PY Data Solutions Inc

Nov'22 – Aug'23

- Designed and implemented predictive models using tree based models like XGBoost, Random Forest, and Gradient Boosted Trees, applying feature selection and hyperparameter tuning to identify high-propensity customers at different funnel stages, leading to increased response rates and improved conversion.
- Developed a Python-based Customer Churn Prediction Model leveraging scikit-learn, reducing churn by 20% and enhancing customer retention and financial performance through proactive engagement strategies.

Data Expert– Data Kind, California (Volunteer)

Sep'22 – Dec'22

- Worked as Volunteer for the San Francisco Chapter: Utilized Deep Learning techniques and PyTorch to detect receipts in photographs. Applied image processing techniques such as image filtering, perspective/affine transformations, edge detection (Canny Edge detection) for image enhancement and text extraction using OCR

Data Analyst – MCA Consulting, Bengaluru, India

Sep'20 - May'21

- Designed and implemented data models and visualizations using SQL and Tableau.
- Analysed Purchase and Sales business data using Benford's law and pareto analysis on Tableau and Excel

Education

Master of Science in Big data and Analytics

Sep'18 – May'20

Atlantic Technological University, Ireland

Academic Projects: [Deep learning](#), [Statistical analysis](#), Machine Learning [Dissertation](#) - Deployed (CNN) algorithm on (GCP)

Bachelor Of Engineering, Information Science

Aug'14 – May'18

Visvesvaraya Technological University, India
