Summary

Software Engineer with experience building scalable Java Spring Boot microservices, cloud-native applications, and full-stack solutions. Skilled in GCP, AWS, PostgreSQL, and DevOps automation, with a strong foundation in algorithms, distributed systems, and Agile development. Proven ability to integrate backend systems with analytics and machine learning workflows to drive business impact.

Skills

- **Languages:** Java, Python, SQL, R
- **Frameworks:** Spring Boot, Spring MVC, Spring Data, Spring Security, Spring WebFlux (Reactive Programming), Hibernate, JPA, Maven
- **Frontend:** HTML, CSS, JavaScript, React, TypeScript
- **Databases:** PostgreSQL, MySQL, MongoDB, Snowflake, Redshift, Relational Databases
- **DevOps & Cloud:** AWS (EC2, RDS), Azure, GCP, Docker, Git, Jenkins, CI/CD Pipelines
- **Tools & Others:** Postman, Swagger, JIRA, GitHub, Informatica, Talend, Tableau, Power BI
- **Soft & CS Fundamentals:** Problem solving, communication (oral & written), team collaboration, agile development, distributed systems, algorithms and data structures, optimization mathematics, object-oriented design (OOD), abstract thinking, analytical and troubleshooting skills, self-learning and adaptability, passionate team player.

Professional Experience

IMaple Inc. | Software Engineer

Mar 2025 - Present

- Developed and deployed scalable microservices using Java, Spring Boot, and RESTful APIs, enabling secure and modular handling of customer data across enterprise applications in a distributed systems environment.
- Migrated monolithic architecture to microservices on Google Cloud Platform (GCP) using Docker containers and automated CI/CD pipelines via Jenkins and GitHub Actions, embracing agile methodologies to deliver high-quality software.
- Integrated machine learning models into backend APIs for customer churn prediction, contributing to a 15% reduction in churn through real-time risk scoring and actionable insights while applying computer science fundamentals.
- Wrote efficient SQL queries and designed robust relational schemas for PostgreSQL databases to optimize storage and performance, reducing data redundancy by 30%.
- Collaborated with cross-functional teams including product managers, analysts, and DevOps in agile sprints to deliver new features, enhancing operational efficiency by 20% and reinforcing principles of object-oriented design and abstract problem solving.

Wide business solutions | Software Engineer

Jan 2022 - Jul 2023

- Built and maintained backend services using Java, Spring Boot, and REST APIs, boosting scalability and cutting response times by 25%.
- Designed PostgreSQL/MySQL schemas, optimized queries, and created stored procedures, reducing execution time by 40%.
- Automated build and deployment workflows with Jenkins and Docker, streamlining releases and reducing manual deployment errors.
- Integrated React and TypeScript components with backend APIs, ensuring smooth data flow and consistent user experience.

Projects

Real Estate Price Prediction Platform

Dec 2022 - Feb 2023

- Built a deep learning model using TensorFlow and Scikit-learn to predict real estate prices based on King County housing data.
- Optimized model performance by engineering key features and reducing mean squared error through hyperparameter tuning.

Customer Churn Dashboard with Backend Integration

Nov 2023 - Jan 2024

- Developed backend services using Spring Boot, PostgreSQL, and JPA to power a React dashboard showing customer churn KPIs.
- Calculated churn risk scores from transactional data, enabling data-driven retention strategies.

Credit Card Fraud Detection API

Dec 2022 - Feb 2023

- Built a Spring Boot microservice to serve fraud detection models trained in R and Python via REST APIs.
- Designed endpoints for real-time and batch predictions, supporting fraud alert automation for client systems.

Education

University of Illinois Springfield.

Aug 2023 - Dec 2024

Master of Science, Management Information Systems (GPA: 3.86)

Amrita Vishwa Vidyapeetham

Jun 2018 - May 2022

Bachelor of Technology

Certifications

- Data, Data Everywhere
- AI using IBM Watson
- Building Autonomous AI
- Computer Vision with Embedded Machine Learning
