PROFILE SUMMARY

- Over 5 years of professional experience in designing, developing, and deploying scalable enterprise Java applications using Spring Boot, Kotlin, and Java across cloud and on-premise environments.
- Strong expertise in Spring Boot ecosystem including Spring Web-Flux, Spring Data, Spring Security, and Spring Cloud, enabling the development of reactive, event-driven microservices architectures.
- Developed and maintained RESTful APIs and reactive services using Spring Web-Flux and Kotlin Coroutines, ensuring high performance and non-blocking I/O operations.
- Hands-on experience in building microservices with domain-driven design (DDD) principles, loose coupling, and API-first development, using tools like OpenAPI/Swagger.
- Proficient in building cloud-native applications and deploying them on containerized platforms using Docker and Kubernetes (K8s).
- Expertise in relational databases like Oracle 10g/9i, PostgreSQL, and DB2; skilled in writing optimized SQL queries, stored procedures, functions, and triggers.
- Solid understanding of Reactive Programming, functional paradigms in Kotlin, and integrating with messaging platforms such as Apache Kafka, RabbitMQ, and AWS SNS/SQS.
- Experience with object-oriented design (OOD), design patterns, and UML modeling, with strong focus on clean code, modular design, and testability.
- Developed secure, modular, and maintainable backend services using Java, Spring Boot, Spring Security, and OAuth2/JWT for role-based access control.
- Experience with CI/CD pipelines using tools like Jenkins, GitLab CI, and Maven, and monitoring solutions such as Prometheus, Grafana, and ELK Stack.
- Skilled in version control systems like Git, SVN, and ClearCase; actively practiced Agile/Scrum methodologies.
- Proficient in frontend integration using HTML, CSS, JavaScript, AJAX, and frameworks like EXT JS when required for full-stack tasks.
- Comfortable working in distributed systems with REST APIs, gRPC, Web-Sockets, and asynchronous communication patterns.
- Experience in analyzing business requirements, client communication, and preparing technical documentation including architecture diagrams, design docs, and use cases.
- Exposure to legacy migration, integrating existing J2EE applications with modern Spring Boot microservices.
- Enthusiastic about writing clean, testable code and following TDD/BDD practices with tools like JUnit, Mockito, and Cucumber.
- Highly organized, self-driven, and collaborative team player with the ability to own features end-to-end in a fast-paced, dynamic environment.

TECHNICAL SKILLS

Software Products: Oracle Application Server, Apache Tomcat Server, WebSphere Application Server

Language: Java, Kotlin, Python, J2EE, Struts, Spring, Helix framework, Hibernate, EJB, Webservice, XML, HTML, PL/SQL, VB Script, Java-script, Typescript

Tools: RAD, Eclipse, J Developer, Toad, Seagate Crystal Report, RUP (Rational Unified Process), Adobe Photoshop

Databases: DB2, MySQL, Oracle, Postgres, MongoDB

Version Control Tools: VSS, CVS, GIT

EDUCATION

Bachelor's Degree

WORK EXPERIENCE

JAVA DEVELOPER

Jan 2024 - Present

Citi Bank || Irving, TX

Responsibilities:

- Designed, implemented, and tested backend services using Spring Boot and Java, applying clean code principles and domain-driven design to build robust and scalable microservices.
- Built reactive, high-performance services using Spring Web-Flux, applying non-blocking I/O patterns for throughput optimization in latency-sensitive applications.
- Integrated Spring Boot with Hibernate ORM to persist and retrieve data efficiently from Oracle 10g databases, and configured custom mappings using XML and annotation-based configurations.
- Developed UI integrations and APIs for dynamic frontends using RESTful services, AJAX, JavaScript, and JSTL, ensuring seamless user experience and maintainability.
- Followed the MVC architecture pattern for building loosely coupled applications, and designed service layers that communicate through clean API contracts, enabling API-first development and easy integration with frontend and third-party systems.
- Collaborated closely with Business Analysts and product teams to translate requirements into actionable backend logic, and participated in daily standups and sprint planning in Agile (Scrum) environments.
- Used PL/SQL to write complex queries, stored procedures, triggers, and optimized joins for high-performance data access; handled database schema creation using DDL/DML scripts.
- Configured and deployed Spring Boot microservices to containerized environments using Docker, and monitored services using logging and alerting tools in a Unix-based production setup.
- Performed issue analysis and live debugging for production-critical systems; served as the primary point of contact for deployment, performance tuning, and client-facing support.
- Worked on reactive UI components using Ext JS, integrating them with backend APIs built in Spring Boot and Spring Web-Flux for end-to-end functionality.

- Managed Hibernate session management, lazy/eager fetching strategies, and data consistency issues across multiple entities and relationships.
- Participated in TDD with JUnit and Mockito, and wrote automation scripts to ensure frontend-backend integration correctness; helped implement CI/CD pipelines using Jenkins and Git-based workflows.
- Tracked issues using ClearQuest and worked in environments driven by Extreme Programming (XP) best practices, including continuous feedback, short iteration cycles, and rigorous testing.
- Handled large-scale data analytics and transformation tasks in Unix environments, ensuring high availability of services during peak hours.
- Effectively contributed to microservice decomposition from monolith, implementing services that are stateless, scalable, and resilient.

ENVIRONMENT: Java, Kotlin, Python, Spring Boot, Spring Web-flux, JBOSS Application Server, JBOSS DROOLS engine, Eclipse, Struts, Hibernate, Core Java, Ext JS,DB2,Cognos,Unix Shell script, SSO, Web service and Agile Development.

Junior JAVA DEVELOPER

Sept 2022 to Nov 2023

Katalyst Healthcare & Life Sciences (Katalyst HLS) || South Plainfield, NJ

Responsibilities:

- Involved in the analysis, design, development, integration, and testing of application modules across a distributed, service-oriented architecture.
- Participated in design discussions and translated requirements into UML-based class and sequence diagrams to document workflows and service interactions.
- Implemented MVC architecture using the Spring Framework, incorporating Core Java and Spring AOP for logging, security, and centralized error handling mechanisms.
- Developed responsive and interactive user interfaces using JSP, AJAX, HTML, CSS, and JSP Tag Libraries, improving application usability and performance.
- Interfaced directly with end clients to support production systems, conduct impact analysis, and resolve issues with minimal downtime.
- Worked with Ext JS to build high-performance UI components including scalable grids, trees, and menus, tightly integrated with backend APIs.
- Handled full-cycle deployment and requirements gathering from clients, ensuring successful delivery of business-critical modules.
- Analyzed and processed large datasets in Unix environments during production hours, focusing on memory and CPU utilization to ensure performance under load.
- Used iBatis (SQL Map) to configure SQL mappings, retrieve database objects, and perform object-relational mapping; leveraged Spring Dependency Injection (DI) for modular and testable code.
- Worked with Oracle 10g for data persistence; wrote complex PL/SQL procedures, packages, triggers, and optimized queries. Created DDL/DML scripts for schema management and data migration.
- Integrated external web services using Apache AXIS, and connected them to the application via Spring and Maven configurations.
- Designed and implemented batch jobs to retrieve records from the database and send the data to external services such as letter-generation APIs.

- Used Maven to manage project builds and dependencies; wrote JUnit test suites to ensure code coverage and regression protection.
- Led defect resolution efforts during system testing, performed extensive troubleshooting, and optimized module performance through stress testing and profiling.
- Performed code versioning and branching using SVN, managing merges, rollbacks, and multi-developer collaboration.
- Integrated Single Sign-On (SSO) mechanisms for secure and unified user authentication across multiple application modules.
- Contributed to the integration of all three architectural layers—Data Service Layer, Business Logic Layer, and Presentation Layer—to ensure smooth data flow and modularity.
- Validated data consistency and flow during integration testing, ensuring accurate communication between subsystems and third-party interfaces.

ENVIRONMENT: Spring Boot, Oracle Sql Developer, Tomcat web server, IntelliJ, Struts, Hibernate, Core Java, Oracleunix shell script, Flex, Web service and Agile development, Sonar, Version one, Clear quest, Maven, Ajax, Jms, Webservice

Jr Java developer

Feb 2020 to Aug 2022

Nepal Mediciti Hospital || *Lalitpur, Nepal*

Responsibilities:

- Involved in business meetings for requirement gathering and understanding system functionality and architectural expectations from stakeholders and product teams.
- Designed UML diagrams for technical specification, including Activity Diagrams, Sequence Diagrams, and Class Diagrams, using Rational Rose UML design tool to map workflows and interactions.
- Followed Agile Software Development methodology throughout the software development lifecycle, participating in sprint planning, stand-ups, and retrospectives.
- Led front-end system web design for complex pages, integrating data pulled dynamically from multiple microservices and backend sources.
- Implemented security features, role-based access control, and request filtering for sensitive web pages to maintain application compliance and integrity.
- Developed backend functionality on MVC-based architecture using the Struts framework, separating presentation logic from business logic for modular development.
- Created and maintained Struts Action Classes, Action Forms, and implemented Struts Validation Framework to support dynamic user interaction.
- Applied Spring IOC (Inversion of Control) Container to manage object dependencies via Dependency Injection (DI) for improved testability and decoupling.
- Used Spring Framework to handle Data Access Exceptions, Transaction Exceptions, and centralized error propagation across the application layers.
- Refactored a large codebase to align with modern best practices, including converting MDB (Message-Driven Bean) Listeners into Spring-compatible components using appropriate design patterns.
- Designed and developed core utility base classes and defined optimal project packaging for clean, scalable code organization.

- Participated in architectural decision-making for Hibernate ORM mapping strategies, optimizing entity relationships and lazy/eager fetching.
- Worked on Single Sign-On (SSO) implementation to centralize user authentication and integrate across systems seamlessly.
- Developed unit test classes using JUnit, maintaining high test coverage and contributing to the project's CI/CD workflow.
- Built server-side components and utilities using J2EE technologies, including Servlets, JSP, and JDBC, within the Oracle JDeveloper IDE.
- Created dynamic JSP pages using Struts tag libraries, ensuring adherence to standard templating and consistent UI behavior.
- Implemented custom workflow logic using the Struts framework to handle client-side navigation control and avoid back-button-related issues.
- Analyzed legacy C++ projects to extract business logic, rewrite modules in Java-based architectures, and prepare comprehensive documentation for migration.

ENVIRONMENT: Java, Spring MVC, JSP, Agile, C++Toad, Oracle Application Server, JDeveloper, J2EE, Struts, Agile Development, Java Script
