SUMMARY

- Data Engineer with 4+ years of expertise in designing, building, and optimizing scalable data solutions, proficient in SQL, Python, data warehousing, data modeling, and ETL/ELT pipelines.
- Optimizing Data Build Tool (DBT) projects in a Snowflake environment by implementing incremental models, leveraging partitioning, tuning query performance, and reducing query runtime and cloud data warehousing costs.
- Expert in implementing robust data pipelines across leading cloud platforms like AWS and leveraging cloud service toolkits (EC2, S3, Lambda, Glue, Athena, AWS Pipeline, Redshift) to ensure efficient data storage, processing, and flow.
- Implementing various CI/CD pipelines in Azure DevOps to automate data engineering projects' build, test, and deployment processes.
- Developing Spark notebooks and jobs within Databricks to perform complex data transformations and machine learning algorithms.

SKILLS

- **Programming Language:** Python, R, SQL
- **Big Data Ecosystem:** Apache Spark, Apache Kafka, Apache Nessie, Hadoop, Hive, HDFS, Zookeeper
- **Cloud:** AWS (EC2, S3, Redshift, Glue, Athena, AWS Pipeline, Lambda, Kinesis, EMR), Azure (SQL Databases, Blob Storage, Cosmos DB, Azure Data Factory, Azure DevOps, Databricks, Azure Stream Analytics)
- **Visualizations:** Tableau, Power BI, Excel
- **Packages:** NumPy, Pandas, Matplotlib, Seaborn, PySpark
- **ETL and Tools:** Fivetran, SSIS, Data Pipelines, Data build tool (DBT), Apache Airflow
- **Version Control & Database:** GitHub, Git, SQL Server, PostgreSQL, Cassandra, MySQL, Snowflake

EDUCATION

Master in Computer and Information Sciences

Long Island University, Brooklyn, NY, USA

Bachelor of Technology in Computer Science

Reva University, Bangalore, India

EXPERIENCE

CitiGroup, New Jersey, USA

Sep 2023– Current

Data Engineer

- Developed and deployed Spark jobs using Python and PySpark, achieving a 10% reduction in processing time compared to traditional MapReduce pipelines.
- Orchestrated complex data pipelines with 3 stages using AWS Step Functions to automate data movement and transformation tasks, ensuring reliable data flow.
- Executed end-to-end data engineering initiatives utilizing Python, PySpark, and distributed systems (Airflow, Databricks, AWS Redshift) to orchestrate scalable data pipelines collaborating with cross-functional teams.
- Executed Kinesis Firehose to stream real-time data into data lakes for near real-time analytics, enabling faster insights generation.
- Built and deployed ETL (Extract, Transform, Load) jobs using Glue crawlers and Spark scripts, automating data ingestion from various sources into a data warehouse, saving 2 hours of manual workload per week.
- Utilized Amazon Kinesis Firehose to stream real-time data into data lakes for real-time analytics, enabling faster insights generation.
- Employed Spark SQL, DataFrames, and Data Build Tool (DBT) transformations to perform complex data transformations and improve processing efficiency.

Genius SoftTech, India

Aug 2019 - Jul 2022

Data Engineer

- Leveraged Snowflake's cloud-based architecture to facilitate collaboration between data analysts and data scientists, leading to a 30% increase in data-driven project completion rate.
- Accelerated PySpark for large-scale data processing and analytics tasks within the Apache Spark ecosystem and utilized DataFrames and SQL functionalities for efficient data manipulation.
- Built ETL pipelines using Azure Data Factory to extract, transform, and load data from various sources into Azure data stores, automating data integration processes and reducing manual effort by 50%.
- Optimized Azure Databricks clusters for large-scale data processing, achieving a 15% improvement in query performance.
- Enhanced and maintained Hive UDFs (User Defined Functions) to extend HiveQL capabilities for data processing tasks.
- Accomplished interactive Power BI reports leveraging advanced DAX and Power Query modeling techniques to unlock deeper data insights and facilitate informed decision-making.
- Improved ETL workflows by rigorous testing and debugging of SQL scripts and Python code resulting in a 50% increase in data processing efficiency and ensuring seamless data integration with downstream systems.
- Created and deployed Apache Flink applications for processing high-volume streaming data, achieving a 25% improvement in processing speed compared to traditional batch processing methods.
