## EDUCATION

**Virginia Commonwealth University**, Richmond, VA

May 2025

### BS in Business Information Systems

- **Relevant Coursework:** Database Systems, Systems Analysis and Design, Financial Management, Programming, Technology Infrastructure, Financial Management, Artificial Intelligence for Business, Design of AI Systems

## WORK EXPERIENCE

### Business Analyst Intern

Remote

*SkyIT (GBCS Subsidiary)*

January 2025 – April 2025

- Supported digital transformation initiatives by analyzing system workflows and mapping data between tools to enable process automation.
- Demonstrated technical and leadership skills by coordinating between tech and business teams to align strategies.
- Conducted data analysis using Excel to generate actionable insights and inform decision-making.
- Participated in agile ceremonies, showcasing adaptability and willingness to learn in a dynamic environment.

## PROJECTS

### Database Design for Real Estate

- Designed a relational database system to manage online real estate data and generate trend reports to support business use cases.
- Created user documentation, including ERDs, relational schemas, and SQL queries for end-users.
- Conducted a comprehensive analysis of market trends and business requirements to streamline operational processes and decision support
- Delivered a successful database demo, showcasing its effectiveness in handling complex real estate data and improving operational processes

### FEMA TSA Eligibility Prediction Using Machine Learning

- Built a Python-based Random Forest model to assess FEMA disaster aid eligibility
- Visualized analytical insights using Power BI and presented key metrics to simulate business communication scenarios.
- Built a Random Forest classifier, performed feature engineering, A/B Testing, hyperparameter tuning, and model evaluation using Python
- Delivered strategic recommendations based on sentiment analysis and operational feasibility

### Business Management Simulation

- Led weekly reporting cycles to optimize budget forecasting and pricing decisions during a business simulation project.
- Used budget forecasting, inventory management, and cost control to improve business outcomes (sales +24.9%, revenue +32%).
- Demonstrated decision-making under pressure and reported findings through concise presentations.
