Summary

I have expertise in data analytics, machine learning, and statistical analysis. My experience with Tableau and PowerBI can be an asset to any project. I excel in critical thinking, problem-solving, and decision-making. I am also familiar with cloud platforms for developing data-driven business solutions.

Education

State University of New York, Albany

[May 2023]

Masters in Data Science - Applied Mathematics

- Dean's merit list, GPA 3.5
- Certified in Professional Google Data Analytics

Kamala institute of technology and science, India

[Sep 2020]

Bachelors in Electronics and Communications Engineering

- Presented a research paper at the National Institute of Technology, Warangal
- Designed a mobile phone using Arduino Micro Controller

Technical Skills

Data Science | **Data Analysis** | Statistical Analysis | **Machine Learning** | Data Mining | **Data Wrangling** | Data Modeling | Data Cleaning | Data Integrity Validation | Data Engineering | Data extraction | Extract Load Transform [ETL] | VBP Analytics | Data Aggregation | Business Analytics | Demand Forecasting | Predictive Analysis | Time Series Analysis | **Python/ Scikit-learn** | R Programming | **SQL/ BigQuery/ Postgres** | **SAS** | MS-Excel / Spreadsheets | MATLAB | Cloud Computing / Azure / AWS / GCP | Data Visualization | **Tableau** | **Power BI** | Root Cause Analysis | Trend Identification | Big Data | APACHE Hadoop | PySpark | Kafka | Report Writing | Attention to detail | Professional Communication | Critical thinking |

Professional Experience

General Electric

Schenectady, New York

Remote operations and control - Data analyst

[Jan 2024 - Current]

- Oversee remote commissioning of wind turbines, troubleshoot commissioning issues remotely and proactively identify abnormal operating conditions, respond promptly to field upset conditions and alarms.
- Demonstrate proficiency in operating power assets remotely, troubleshoot technical challenges for optimal performance.
- Employ advanced remote troubleshooting techniques to resolve system issues promptly, escalate incidents when necessary by following established ROC procedures, communicate effectively, escalate issues for timely resolution.
- Collaborate with cross-functional teams, provide relevant information to enhance problem-solving efforts.
- Adhere to ROC procedures for compliance with global standards, maintain industry awareness.
- Provide technical support to on-site technicians during maintenance, ensure compliance of maintenance activities.

- Develop and maintain relationships with stakeholders and partners, including internal teams, external vendors and customers, and maintain accurate records of maintenance and operating procedures, system upgrades or changes.

State University of New York, Albany

Student Assistant - Library Analyst

Albany, New York

[Aug 2022 - May 2023]

- Collected data related to library usage, collections, and services through various methods, ensuring accuracy and completeness.
- Analyzed the curated dataset to uncover emerging bibliographic trends, circulation patterns, and valuable insights, presenting the results through comprehensive reports and data visualizations.
- Provided research support to faculty and staff, including data analysis and assistance with research projects and resource access for patrons.
- Participated in user experience assessments to improve library services and spaces, gathering and analyzing patron feedback for recommendations.
- Assisted with general library operations, which may include tasks such as shelving books, helping patrons, and contributing to special projects as assigned by library management.

Tools: ALMA, MS-Excel

Electronics Corporation India Limited

Embedded Systems Project Intern

Hyderabad, India

[May 2019 - Jun 2019]

- Defining project objectives to enhance industrial safety and automation.
- Outlining the scope of developing a real-time industry automation system using UC/OS-II RTOS and GSM communication.
- Architecting the system, including centralized controller, sensors, and relays.
- Integrating hardware components for real-time monitoring and control.
- Developing UC/OS-II Real-Time Operating System (RTOS) for ARM7 LPC2148.
- Writing Embedded C code to monitor parameters and control production processes in real time.
- Implementing GSM communication protocols for data transmission.
- Enabling the centralized module to send information to end-users and execute production control via relays and actuators.
- Ensuring compliance with electrical safety standards.
- Designing resilient circuits and connections to withstand environmental variations.
- Creating comprehensive test plans and executing tests, including unit and integration testing.
- Validating system functionality and real-time responsiveness in various scenarios.
- Producing thorough technical documentation, including user manuals and specifications, carefully documenting hardware and software configurations.

Tools: ARM7 microcontroller, relays, sensors, Actuators, GSM, C programming

Projects

Kidney Stone prediction model using stream lit cloud [TensorFlow, Keras, Pandas, Tableau]

- leveraged Tableau to conduct in-depth data analysis, extracting valuable insights, and improving the dataset's quality.
- Utilized expertise in model evaluation, and meticulously assessed a spectrum of machine learning and deep learning models, ultimately pinpointing the most effective approach Bi-LSMT model with 78.5% accuracy.
- Successfully deployed the prediction model as a user-friendly web application on Stream lit Cloud, ensuring easy accessibility for end-users.

Spotify's most successful music, How modern production studios compete[MS-Excel, Pandas, PowerBI]

- Analyzed 60 years of Spotify data with 23 attributes revealed genre contributions, providing crucial insights into music trends. MS Excel was employed for meticulous data preprocessing.
- Forecasted multiple genres accurately predicted the enduring popularity of pop music through time series analysis. These trends were then visually presented using Power BI for enhanced clarity.
- Leveraging advanced clustering techniques on numeric characteristics, our model achieved 83.7% accuracy. This approach equips production studios to identify emerging music trends and maintain their competitive edge in the industry.

Predicting ventilator pressure using Deep learning [Pandas, Numpy]

- Preprocessed a big dataset of 1,048,575 entries across 8 fields by addressing missing values, cleaning, and transforming data
- Conducting Exploratory data analysis and statistical analysis techniques to gain insights
- Engaged in feature engineering to identify and extract meaningful features. Trained and evaluated various models (RNN, GRU, LSTM, Bi-LSTM) and utilized confusion matrices to assess their performance with an accuracy of 79.5%.

Authentication of military images using Fragile watermarking [MATLAB, Digital image processing]

- Being a team lead, using the digital image processing algorithm, initialized two RGB images and extracted the colors, segmented one image into blocks, and mapped on the other using linear transformation mapping
- Authenticated the image by binding pixel values of rows and columns as of the first key and threshold value as the Second
- Recovered the image by computing the average intensity of each block detected for tampered bits and restored the content pixel-wise by de-authentication
