Education

Kennesaw State University | Marietta, GA
Bachelor of Science in Software Engineering, GPA 3.7

August 2021 – May 2025

Experience

Institute of Nuclear Power Operations (INPO) | Atlanta, GA
Software Engineer/Technical Support Analyst Co-Op

May 2022 – August 2025

- Progressed from Technical Support Analyst to Software Engineer, consistently expanding responsibilities from IT Support and system administration to full-stack development and application enhancements.
- Designed and developed user-facing pages utilizing Figma, AngularJS, and CSS, improving usability and application functionality.
- Resolved UI/UX styling inconsistencies across industry web applications, ensuring cleaner, standardized user interfaces.
- Improved backend reliability by refactoring API methods, implementing error handling, and resolving database validation issues, enhancing system stability, and accuracy.
- Completed Liferay platform training and successfully configured a local environment, enabling contributions to enterprise portal development.
- Collaborated with IT and business stakeholders to troubleshoot access, security, and synchronization issues, restoring functionality for users across multiple platforms.
- Partnered with leadership and cross-functional teams on application modernization and elimination initiatives, designing frameworks, training co-ops, and presenting findings to leadership.
- Provided technical support and IT operations earlier in tenure: managing hardware inventory, onboarding employees, coordinating office moves, delivering incident resolution via ServiceNow, and supporting conference room technology.
- Led and trained co-ops in both technical support and software development contexts, fostering knowledge-sharing and smooth team transitions.

- Key Projects**
- Created APIs to support application rewrites, enabling industry peers to select opportunities for plant evaluations and ensuring seamless database communication.
 - Designed a Figma prototype for modernizing a legacy application.
 - Executed a mass email modification for a member utility, updating 1000+ user accounts with minimal business disruption.
 - Assisted with the deployment of Windows 11 in alignment with the industry's MRM initiative.
 - Improved conference room experience by developing standardized procedures and technical guidance.
 - Diagnosed and resolved critical profile creation and validation issues by updating database logic to restore full functionality for end users.
 - Delivered technical process documentation and streamlined workflows for hardware returns, onboarding, and system updates.

State Farm | Dunwoody, GA
Software Engineer Intern

May 2023 – August 2024

- Developed and maintained automation scripts in ServiceNow to streamline monthly audit reports, reducing manual intervention by 85% and saving significant team time.
- Designed and deployed automated workflows and ServiceNow business rules, improving efficiency and ensuring compliance with business requirements.
- Enhanced the web interface data management tool, optimizing usability and functionality for cross-team adoption.
- Created ATF test suites in ServiceNow, strengthening test coverage and system reliability.
- Debugged and optimized complex scripts and workflows within ServiceNow, resolving errors and enhancing performance.
- Utilized Github for version control and conducted code reviews to ensure quality, reliability, and smooth integration of updates.
- Completed ServiceNow Admin Fundamentals training, expanding platform expertise.
- Collaborated across teams to gather requirements, implement custom applications, and ensure solutions aligned with user needs.
- Built experience in frontend development by designing and testing UI/UX components for customer-facing applications, including deploying enhancements such as rental disclaimer message to improve user experience and legal compliance.

- Conducted cross-device and cross-browser testing to validate functionality and design consistency across multiple environments.
- Designed and tested responsive UI components for the car rental application, ensuring compatibility and consistent experiences across desktop, tablet, and mobile devices.
- Collaborated with designers and product owners to translate wireframes and design mockups into functional, user-friendly components.
- Contributed to accessibility improvements by ensuring proper labeling, color contrast, and keyboard navigation support within new features.
- Partnered with backend developers to ensure seamless API integration and consistent data rendering within the UI.

Key Projects

- Participated in the company's Hack Day by researching and utilizing ServiceNow's platform capabilities to design workflows, automate processes, and create dashboards for a Digital Portfolio Management service.
- Developed and deployed SOLMA, a ServiceNow application for managing service operations and assets.
- Designed and tested responsive UI components for a car rental application, ensuring a consistent user experience across platforms.

Projects

Pet Matchmaker | Kennesaw State University

January 2025 – May 2025

Project Manager/Full Stack Developer

- Developed a web application for Angels Among Us to assist in efforts of matching users with adoptable pets based on dynamic questionnaire responses.
- Served as Team Lead, overseeing sprint planning, retrospectives, code reviews, and task delegation in line with Agile practices.
- Utilized Angular, Node.js/Express, SQL Server, and REST APIs to deliver and ensure a seamless full-stack solution.
- Implemented a custom questionnaire with branching logic, permitting admins to create tailored adoption workflows.
- Designed choice-based navigation and modal editing tools, improving user experience and scalability.
- Integrated Petfinder API to provide real-time adoptable pet listings and OpenAI API to generate personalized pet adoption recommendations, enhancing user engagement.
- Led design implementation by curating a prototype in Figma, ensuring intuitive user flows and consistent UI/UX.
- Conducted weekly demos with Angels Among Us stakeholders to validate business and user requirements and implemented feedback to align with adoption workflows.
- Deployed on an institutional Windows server with VPN access, coordinating hosting of frontend, backend, and database in a secure environment.

BookKeepLite

August 2024 – December 2024

Project Manager/Full Stack Developer

- Led a Team in building a lightweight accounting platform for managing small business financial records in order to support expense tracking, invoicing, and reporting.
- Implemented authentication, CRUD functionality, and role-based access control, improving usability and security.
- Led efforts in database schema design for a NoSQL data model, enabling flexible storage of financial records and efficient querying.
- Assisted Team members in learning and applying Angular best practices to ensure consistency and overall code quality.
- Utilized previous internship experience in the development process with the utilization of Agile methodologies and led the Team in understanding the requirements provided by the instructor.
- Formulated user stories and conducted sprint planning and retrospectives on a weekly basis to ensure understanding and alignment amongst all Team members.

Certifications

- HDI Support Center Analyst Certification
- A+ Certification
