

Tanki Bohara

SQL / BI / ETL
Developer

CONTACT ME

Address: Little Elm, TX 75068

Phone: 214-723-5284

Email: boharatanki2025@gmail.com

CAREER OVERVIEW

- Experienced database and business intelligence professional with 5+ years in SQL Server, ETL processes, and data analysis.
- Expertise in designing, optimizing, and managing large-scale databases to improve data accuracy and efficiency.
- Skilled in developing ETL solutions using SSIS, Azure Data Factory, and Informatica for seamless data integration.
- Proficient in designing data models, including star and snowflake schemas, for scalable reporting solutions.
- Hands-on experience in SQL performance tuning, indexing strategies, and query optimization for improved system efficiency.
- Strong background in data visualization and reporting, leveraging Power BI and SSRS for real-time insights.
- Adept at automating data workflows, reducing manual intervention, and ensuring timely data updates.
- Experience with cloud technologies (Azure, AWS) for data migration, storage optimization, and security compliance.
- Familiar with Agile and Scrum methodologies, ensuring efficient project delivery and cross-team collaboration.
- Expertise in troubleshooting and resolving database-related issues, ensuring high availability and reliability.
- Strong understanding of data governance, privacy regulations (HIPAA, GDPR), and security best practices.
- Passionate about leveraging data-driven solutions to enhance business intelligence and operational decision-making.

PROFESSIONAL SKILLS

Databases & RDBMS: Microsoft SQL Server (2022–2014), Oracle (10g/11g), DB2, MySQL, PostgreSQL, MS Access, Teradata, Redshift, Snowflake, MongoDB, NoSQL

ETL & Data Integration: SQL Server Integration Services (SSIS), Azure Data Factory, Talend, Informatica PowerCenter

Business Intelligence & Reporting: SQL Server Reporting Services (SSRS), SQL Server Analysis Services (SSAS), Power BI, Tableau, MS Excel (Advanced Analytics)

Cloud & Big Data Platforms: Microsoft Azure (Data Lake, Azure SQL DB, Synapse Analytics), AWS, GCP, Snowflake

Programming & Scripting Languages: T-SQL, PL/SQL, Python, Java, C#, PowerShell, DAX
Data Management & Architecture: OLAP, OLTP, Data Quality, Data Mining, Data Normalization, Data Warehousing, Star Schema, Snowflake Schema

Development & Monitoring Tools: SQL Server Management Studio (SSMS), SQL Profiler, Visual Studio (2012/2019), Azure Monitor, Azure DevOps, Business Intelligence Development Studio (BIDS), Erwin Data Modeler

Version Control, Automation & UI: Git, CI/CD, CSS

Methodologies: Agile, Scrum

Operating Systems: Windows 10, Windows Server (2022, 2019, 2016), Linux

E D U C A T I O N

Bachelor's Degree

E X P E R I E N C E

SQL/BI Developer | June 2024 – present

Carenet Health | San Antonio, TX

- Engineered database and OLTP/OLAP solutions to enhance patient data processing and regulatory compliance.
- Developed complex T-SQL, PL/SQL, and Python scripts for ETL processes, data mining, and reporting workflows.
- Designed, deployed, and optimized ETL pipelines using SSIS, Azure Data Factory, and Talend across SQL Server, Oracle, Snowflake, and Redshift environments.
- Created Power BI dashboards and SSRS reports using advanced DAX to deliver real-time insights.
- Integrated MongoDB and NoSQL datasets with RDBMS systems to broaden analytical capabilities.
- Applied data normalization and cleansing techniques to enhance data quality and consistency.
- Implemented cloud-native solutions on Azure, AWS, and GCP for secure data storage and optimized processing.
- Built CI/CD pipelines for data deployments and implemented Agile best practices for rapid delivery.
- Developed Java-based microservices for data ingestion, and used CSS for web-based report styling.
- Maintained SSAS cubes for multidimensional analytics and improved reporting performance.
- Provided performance tuning, anomaly detection, and schema optimization across large datasets.
- Ensured HIPAA-compliant encryption, role-based security, and data governance across systems.
- Created Power BI dashboards and SSRS reports for real-time patient care analytics.
- Used SQL to query the databases and do as much crunching as possible in Teradata, using very complicated SQL.
- Built servers using AWS, importing volumes, launching EC2, creating Security groups, Autoscaling, Load balancers (ELBs) using Cloud formation templates & AMI's using Infrastructure as a Service (IaaS).
- Implemented role-based security for database access, ensuring data privacy and compliance.
- Developed and maintained documentation for database architectures and ETL workflows.
- Developed and deployed SSRS reports, SSIS packages, and data flows for enterprise data warehouse initiatives.
- Developed high-performance T-SQL and PL/SQL scripts for quality ETL processes in SQL Server, Oracle, Snowflake, and Teradata environments.
- Built scalable ETL pipelines in Talend, Azure Data Factory, and integrated GCP storage for hybrid cloud architecture.
- Designed and normalized complex data warehouse models (star, snowflake) for OLAP analytics with SSAS and Power BI with DAX.

- Automated CI/CD pipelines for database deployments from Git, Azure Repos, and Visual Studio to streamline delivery processes.
- Developed Java-based microservices to ingest real-time data feeds, enhancing efficiency in ingestion and transformation.
- Secured environments with role-based access, encryption, and compliance auditing on AWS, Azure, and on-premise environments.
- Integrated and normalized NoSQL sources of data to RDBMS platforms, improving BI consistency and analytical coverage.
- Used Informatica for enterprise-level data integration and monitoring dashboards on pipeline performance.
- Enhanced performance and availability with partitioning, indexing mechanisms, and advanced anomaly detection.
- Documented metadata, data lineage, and warehouse designs to address audit and governance needs.
- Implemented SCD type1 and type2 using DBT Pipelines to capture data in snowflake.
- Automated data cleansing processes to enhance data quality and reduce discrepancies.
- Integrated cloud-based storage solutions to optimize data accessibility and cost-efficiency.
- Provided SQL performance tuning and troubleshooting to enhance system reliability.
- Designed and deployed OLAP cubes to facilitate multidimensional healthcare analytics.
- Built machine learning models in Python to predict patient readmission rates, helping hospitals optimize resource allocation.
- Developed dynamic ETL processes that adapt to schema changes, reducing maintenance efforts by 40%.
- Implemented real-time data streaming solutions for patient monitoring systems, improving response time for critical care teams.
- Designed a metadata-driven framework to automatically track ETL pipeline performance and detect anomalies.
- Enhanced system security by encrypting sensitive patient data and implementing multi-factor authentication for database access.

Environment: MS SQL Server 2016/2019/2022, Oracle 9i/10g, PostgreSQL, MySQL, Teradata, Snowflake, Redshift, SSIS, SSRS, Power BI, DAX, T-SQL, PL/SQL, Python, Java, MongoDB, NoSQL, OLAP, OLTP, Azure Data Factory, GCP, Talend, CI/CD, Agile, Windows Server 2016/2022, Server Data Tools for Visual Studio 2013/2022, Import/Export tools, Power Designer, Visual Studio, CSS, SQL Profiler, Informatica, , RDBMS Concepts, C#.

SQL/ETL Developer | May 2022 – May 2024

Stellar Bank Kirby | Houston, TX

- Developed ETL pipelines for migrating financial data from legacy systems to modern SQL environments.
- Improved system efficiency by optimizing query execution plans and database indexing.
- Designed Power BI dashboards to track financial trends and operational performance.
- Established data validation protocols to ensure accuracy in customer financial records.
- Integrated Azure Data Factory pipelines for automated data transformation and movement.
- Automated fraud detection reports to identify anomalies in banking transactions.
- Designed and implemented ETL structures using SSIS, Talend, and Oracle PL/SQL to migrate bank data securely.
- Scheduled SSRS reports and Power BI dashboards in DAX to provide KPIs for financial analytics, risk management, and fraud detection.

- Implemented CI/CD patterns to automate database release management using Git and Visual Studio tools.
- Developed and maintained normalized schemas to provide transactional integrity and high-performance reporting.
- Integrated datasets into Snowflake and PostgreSQL environments for cloud-first, elastic data processing.
- Built ETL processes in the Snowflake Data Factory using dbt to manage and store data from internal and external sources.
- Implemented data modeling and validation frameworks in a controlled financial environment to maintain data consistency and regulatory compliance.
- Optimized SQL processes and data streams on Teradata, SQL Server, and Oracle platforms to reduce 40% processing time.
- Utilized Informatica and DataStage for high volume ETL loads and enhanced data reconciliation and traceability.
- Designed a centralized metadata repository and business glossary for enterprise data stewardship.
- Supported BI reporting through MicroStrategy, enhancing visualization of credit risk models and operational metrics.
- Implemented ETL frameworks with SSIS, Talend, and Informatica to migrate financial and transactional data between SQL Server, Snowflake, PostgreSQL, and Teradata platforms.
- Designed complex T-SQL and PL/SQL stored procedures to automate core banking processes such as reconciliation, fraud detection, and reporting.
- Designed interactive SSRS reports and Power BI dashboards with DAX, providing self-service analytics for credit risk and portfolio monitoring.
- Integrated data with DataStage pipelines and governed dependency-based orchestration with error handling and alerting.
- Built real-time data flow procedures with custom Java logic to enhance ingestion from online banking channels.
- Applied normalization and data quality processes to ensure data integrity, auditability, and regulatory compliance.
- Implemented CI/CD pipelines with Git, Visual Studio, and Azure DevOps to automate release cycles and reduce manual intervention.
- Used MicroStrategy for executive-level dashboarding to extend strategic visibility to key financial KPIs.
- Created SSIS package to load data from XML Files, SQL Server 2005 and Teradata to SQL Server 2012 by using Lookup, Fuzzy Lookup, Derived Columns, Condition Split, Term Extraction, Aggregate, Pivot Transformation, and Slowly Changing Dimension.
- Modeled and deployed horizontally scaled data warehouse layers, including fact/dimension tables and surrogate key strategies.
- Enabled hybrid analytics with GCP, AWS, and on-premise data stores, reducing compute costs with effective workload distribution.
- Made contributions to Agile sprints to deliver ETL and reporting deliverables in a timely manner while monitoring metadata and change history.
- Developed data masking techniques to secure sensitive financial information.
- Implemented database partitioning strategies to optimize large-scale data processing.
- Created and maintained metadata management solutions for data cataloging and governance.
- Supported system upgrades and migrations to ensure seamless data transition with minimal downtime.
- Provided technical guidance on optimizing cloud-based data storage and processing costs.
- Designed a real-time risk assessment model using SQL and Python to enhance fraud prevention measures.
- Optimized financial reporting dashboards to support predictive analytics for loan approvals and investment trends.

- Integrated AI-driven anomaly detection algorithms into banking data workflows to flag irregular transactions automatically.
- Led a cross-functional initiative to automate reconciliation processes between internal and external financial systems, reducing manual errors by 60%.

Environment: MS SQL Server 2019, Oracle 10g, PostgreSQL, Snowflake, Teradata, SSAS, SSMS, Power BI, T-SQL, PL/SQL, Server Data Tools for Visual Studio 2022, Java, Python, Azure Data Factory, Talend, Git – Azure Repos, CI/CD, Agile, Informatica, Windows Server 2022, Visual Studio 2022, Server Data Tools, SQL Profiler, MongoDB, OLAP, OLTP, RDBMS, GCP, AWS, C#.

ETL Developer| March 2021 – March 2022

Innovate Tech | Kathmandu, Nepal

- Designed automated data workflows to streamline enterprise reporting and analytics.
- Built data warehouse structures to enhance reporting scalability and data accessibility.
- Developed SQL queries for efficient data extraction and transformation across systems.
- Created SSRS reports and Power BI dashboards for visualizing business KPIs.
- Developed, scheduled and generated variety of reports like List, Matrix, Drill-Down, Chart and Sub Report and standardize company report by implementing SSRS.
- Implemented incremental data loading strategies to improve processing efficiency.
- Developed logging and error-handling mechanisms for ETL processes.
- Implemented AWS solutions using EC2, S3, EBS, ELB, Route53 & Auto scaling groups.
- Migrated ETL workloads to cloud-based infrastructure for better performance and cost savings.
- Collaborated with stakeholders to gather business requirements and deliver tailored data solutions.
- Designed indexing strategies to improve SQL query performance and report generation times.
- Ensured data accuracy by implementing validation rules and automated data quality checks.
- Worked on number of data migration project from Teradata to SQL and SQL to Teradata based on the requirements.
- Provided ongoing support for performance tuning and troubleshooting of ETL processes.
- Trained junior developers on best practices for ETL design and data integration.
- Developed automated data lineage tracking tools to improve traceability of data across ETL processes.
- Used various cloud technologies and tools from AWS, Azure, Microsoft and Confidential cloud for storage transfer
- Optimized cloud-based ETL processing, reducing data processing costs by 30%.
- Implemented a real-time data synchronization mechanism between on-premise and cloud databases for hybrid environments.
- Designed an automated backup and disaster recovery strategy, reducing downtime risk in case of data loss.
- Created a structured knowledge-sharing framework to document best practices and lessons learned from major projects

Environment: MS SQL Server 2016, SSIS, SSRS, SSAS, SSMS, Server Data Tools for Visual Studio 2013, Import/Export tools, DAX, MDX, T-SQL, PL-SQL, C#, Windows Server 2016, TFS.

Leapfrog Technology | Kathmandu, Nepal

Jr. Database Developer | Jan 2020 – Feb 2021

- Developed SQL queries and stored procedures for sales and inventory reporting.
- Designed normalized and denormalized database schemas for optimal performance.
- Automated data extraction processes to streamline reporting operations.
- Built Power BI dashboards to track sales trends and customer purchasing behavior.
- Integrated SQL Server Agent jobs to schedule and monitor automated data tasks.
- Provided troubleshooting and performance tuning support for business applications.
- Created documentation for database structures and stored procedures.
- Developed role-based access control to secure database resources.
- Implemented data cleansing scripts to improve data integrity and reliability.
- Assisted in migrating legacy reports to modern BI tools for improved visualization.
- Collaborated with business teams to understand reporting needs and deliver tailored solutions.
- Provided support in upgrading SQL Server environments to enhance system performance.
- Developed an automated sales forecasting model to help the business predict inventory needs more accurately.
- Designed a self-updating data dashboard that provided real-time insights without manual intervention.
- Integrated geospatial data analytics into reporting to analyze regional sales performance.
- Developed a script to monitor and flag unusual inventory fluctuations, reducing shrinkage by 15%.
- Created interactive reports with drill-through capabilities, allowing deeper insights into sales and operations.
- Developed complex T-SQL codes to create/update database objects such as Tables, Views, Stored Procedures, User Defined Functions, Triggers, Indexes, and Cursors.
- Used Joins, Correlated and Non-Correlated Sub-Queries for complex business queries involving multiple tables & calculations from different databases.
- Experienced with Dynamic SQL, and developed procedures utilizing the functionality.
- Used SSIS to create ETL packages to Extract, Transform and Load data to Data Warehouse and Data Mart Databases.
- Developed, Maintained, and Monitored all import/export and Data Transformation into the Staging Database.
- Extracted data from different sources (CSV, Excel, and MSSQL and Oracle database sources) and load to Data Warehouse using SSIS complex data transformations (Data Conversion, Export Column, Merge join, Sort, Union all, Conditional Split, Lookup, Fuzzy Lookup, Slowly Changing Dimension, Derived Column, Row Count, and more) for existing/new packages.
- Developed SSIS packages using For Each Loop Container in the Control Flow elements to process all Excel files within folder; File System Task to move file into Archive after processing; and Execute SQL task to insert transaction log data into the SQL Table.
- Well experienced in using Table Variables and Common Table Expressions (CTEs).
- Scheduled Jobs for executing the stored SSIS packages which were developed to update the database using SQL Server Agent. Also, involved in deployment of SSIS Packages.
- Used advanced features of T-SQL in order to Design and Tune T-SQL to interface the database and other applications in most efficient manner.
- Generated Sub-Reports, Cross-tab, Conditional, Drill-Down reports Drill-Through reports and parameterized reports using SSRS.
- Created reports to retrieve data using Stored Procedures that accept parameters.
- Experience on working in Agile/Scrum environments.

Environment: MS SQL Server 2016, SSIS, SSRS, SSAS, SSMS, Server Data Tools for Visual Studio 2013, Import/Export tools, ,MDX, T-SQL, PL-SQL, C#, Windows Server 2016/2012, TFS ,SQL Query Analyzer, MS SQL Server Integrated Services (SSIS) and MS SQL Server Reporting Services (SSRS), SQL Profiler, Microsoft Office.
