SUMMARY

Cybersecurity professional with a Bachelor's degree in Computer Science and hands-on experience supporting security operations and incident investigation through labs and real-world projects. I have worked on log analysis, vulnerability assessment, event correlation, and security documentation, and I enjoy analyzing security events to understand risks and support remediation. I bring a strong analytical mindset, attention to detail, and clear communication skills, along with experience using industry security tools to support day to day security operations.

SKILLS

Cybersecurity & Networking: Kali Linux, Nmap, Metasploit, Vulnerability Scanning, Incident Response (triage, escalation, data collection), Log Analysis, Network Traffic Analysis, Case Documentation & Reporting, Basic Insider Threat Concepts & Policy Packet Analysis, Wireshark, OpenVas, Splunk, tcpdump, Risk Mitigation, OSINT, Data Encryption, OWASP, NIST Frameworks

Programming Languages: Python, Java, C, C++, Kotlin, Bash

IT Support & Troubleshooting: Windows OS setup, configuration, and error resolution, hardware repair, software installation, diagnosing slow performance, power issue, system upgrade, driver updates, BIOS management.

Web & Database Technologies: HTML, CSS, Flask, SQL Alchemy, MySQL, Firebase,

Methodologies: Agile (Scrum), Software Development Life Cycle (SDLC)

Tools & Software: GitHub/Git, Visual Studio, Postman, JIRA, Azure DevOps (ADO), Microsoft Office Suite (Word, Excel, PowerPoint), Android Studio

PROJECTS

Cybersecurity Capstone Project

This project aimed to assess Artemis network infrastructure to enhance protection of customer data and ensure compliance with industry standards. Key skills gained included reconnaissance, vulnerability assessment and risk analysis using tools like Nmap, Burp Suite, Metasploit, Nessus and OSINT framework. Performed SOC-style investigation steps including log review, correlation, and documenting incident findings. The assessment uncovered nine critical high risk that can lead to data exposure and system compromise. In order to remediate, actionable remediations is provided to strength its security and ensure long term resilience. With the remediation strategies the security posture of Artemis increased by 30%.

<https://github.com/tanvirA25/Cybersecurity/tree/main/Springboard%20Capstone%20Project>

Vulnerability Scanning Lab (Kali Linux, OpenVAS, Nmap)

Completed a vulnerability scanning lab using Kali Linux tools, including Nmap/Zenmap and OpenVAS. Performed network reconnaissance and scanning to identify active hosts, open ports, and known vulnerabilities using the Greenbone Community Feed. Correlated scan results by analyzing host behavior and evidence to support investigation scenarios. Gained hands-on experience with the first two phases of the penetration testing lifecycle.

Campus Safety Application (Python):

Designed an application for receiving emergency alerts, utilizing Python Flask for the backend and SQL Alchemy for database management. The front end was developed using HTML and CSS to create a user-friendly interface. The application showcases daily emergency alerts and maintains a history of alerts within a specified timeframe. It features an immediate alert notification system that sends email alerts with location details to users as soon as new alerts are added. Administrators are responsible for updating alerts, while users can receive alerts and provide feedback on the application. The project

followed the Scrum methodology, emphasizing collaboration with team members and maintaining effective workflow with stakeholders.

Enigma Machine (C++):

Successfully developed an Enigma machine with 99% encryption/decryption accuracy using C++ and NES Encryptor. The system processed ASCII text and incorporated key components like wheels, rotors, plugboards, reflectors, and wheel assemblies, integrated into a unified system for configuring wheel settings. The NES Facade facilitated both encryption and decryption, supporting plain text file input for seamless encryption and decryption.

EXPERIENCE

Cybersecurity Trainee | Springboard | Online

Jan 2025 – Sep 2025

- Analyzed network traffic and host-based logs to identify suspicious patterns and indicators of compromise.
- Performed incident response tasks including triage, data collection, and escalating confirmed events.
- Conducted vulnerability analysis and produced structured reports documenting risks and remediation steps.
- Investigated findings from 30+ lab scenarios and documented results using IR-style reporting formats.
- Applied TCP/IP fundamentals, threat analysis techniques, and SIEM workflows during hands-on labs.

Sales Associate | Express Clothing | Paramus, NJ

May 2022 – August 2022

- Provided personalized customer service and wardrobe assistance to enhance the shopping experience.
- Promoted loyalty programs by explaining benefits and encouraging repeat engagement.
- Maintained store presentation by organizing racks and shelves to highlight key merchandise.
- Handled transactions efficiently while ensuring a positive and welcoming environment for all customers.

Volunteer Computer Troubleshooter (Independent, Self-Trained)

2022 - Present

- Resolved hardware and software issues including no power, slow system performance, and Windows OS malfunctions.
- Enhanced computer functionality by repairing motherboards and batteries, optimizing system settings, and performing software upgrades to improve overall performance.

EDUCATION

Bachelor of Science in Computer Science | New Jersey Institute of Technology (NJIT) | Newark, NJ

Dec 2024

GPA – 3.34

ACTIVITIES

(Personal Project) Independent Creator – Photography, Videography, Vlogging

- Cultivated a travel and short film channel on YouTube and Instagram, resulting in 30+ subscribers and 300+ views.
- Proficient in **Adobe Premiere Pro**, **DaVinci Resolve**, and **Lightroom** for high-quality video and photo editing.
- Apply attention to detail, technical workflows, and creativity to produce visually engaging content
