WORK HISTORY

Sr. Business Analyst at CATERPILLAR

June 2023 - Present (2.5 Years)

- Worked directly with product owners and business analysts to break down requirements, prioritize stories, and clarify scope across banking product features.
- Participated in product discovery and planning sessions, converting wireframes and Figma flows into UI stories with clear acceptance criteria.
- Used Jira and Confluence to track deliverables, capture dependencies, and manage sprint boards alongside cross-functional teams.
- Reviewed and interpreted API contracts and documentation, supporting backend teams in aligning technical specs with user-facing components.
- Provided UX feedback and improvements during UAT and internal demos, aligning releases with stakeholder expectations.
- Contributed to product strategy discussions, suggesting improvements based on user interaction trends and performance metrics.
- Created dynamic Tableau dashboards to visualize portfolio-level KPIs, attribution summaries, and asset allocation trends.
- Facilitated Agile ceremonies including sprint planning and retrospectives to drive progress and mitigate delivery risks.
- Ensured alignment with compliance and regulatory standards across investment reporting activities.
- Led UAT efforts by coordinating test case development, execution, and validation with performance and QA teams.
- Delivered performance review presentations and data-driven insights to senior stakeholders and fund managers.
- Environment HTML5, CSS3, SCSS, Tailwind CSS, rxjs, NGRX store Fuse, ag-grid, Bootstrap, Angular, Jira, GIT, AWS, Kafka, nginx.

Business Analyst at MYLAN LABORATORIES

October 2020 - July 2022 (2 Years)

- Supported the development of web-based learning platforms by collaborating with business stakeholders to gather feature needs and transform them into implementable tasks.
- Conducted functional analysis and mock API testing using Postman to validate data models, aiding in faster sprint execution and quality assurance.
- Created user flow diagrams and persona-based maps to help product teams understand user journeys and optimize feature sets.
- Attended grooming sessions and sprint retrospectives, contributing insights on feature complexity and implementation feasibility.
- Partnered with product and QA teams to review test scenarios and user validation criteria, ensuring business needs were accurately reflected.
- Created and maintained interactive dashboards in Tableau for end-users to view fund performance, risk metrics, and attribution breakdowns.
- Interacted with vendors like Bloomberg and internal data teams to resolve discrepancies in

pricing and classification.

- Played a key role in Agile sprints, refining user stories, and conducting backlog grooming sessions.
- Environment HTML5, CSS3, Vanilla.js, jQuery, D3.js, rxjs, ngrx, Bootstrap, Angular6, Angular.js, Node.js, Grunt, JSON, DOM, AJAX, WordPress, MySQL, Solr, Docker, AEM, rally, Docker, Jenkins, Azure.
