Seattle, Washington, USA | +1 (510) 542-9297 | tejaimmaneni1@gmail.com | [LinkedIn](#)

Summary

Full Stack Developer with over 5 years of experience in building scalable microservices and serverless APIs using Java, Node.js, and creating user friendly front-end interfaces using React.js, Angular. Well versed in RESTful API development, SQL and NoSQL databases and cloud deployments on AWS and Azure. Designing and integrating event driven systems using Apache Kafka, AWS SQS, RESTful APIs, ensuring seamless, scalable communication. Secured the applications using OAuth2, JWT, and Spring Security across cloud and microservices environment. Recognized as 'Engineer of the Quarter' in Q2 2021 for exceptional performance on critical projects.

Professional Experience

Symetra, Washington, United States

Software Engineer

07/2025 – Present

- Led the implementation of asynchronous serverless AWS lambda using Java to automate Symetra's life insurance profile and servicing updates (address, phone, email, billing method), reducing update processing time by 40%.
- Switched backend processing to event driven design using Apache Kafka and Java AWS lambda, with this flow eliminating 4+ manual touchpoints, increasing throughput by 65% and handling 7k+ requests per month.
- Developed Spring Boot Auto Index microservice (Docker) that calls internal Rest APIs to retrieve, normalize customer, policy, role, then auto files in Chorus/AWD secured via JWT and AWS Secrets Manager, reducing manual errors by 70%.
- Integrated AI using GPT, Sonnet, Claude Code to securely store & manage policy data, enabling real time updates across the AWS cloud.
- Built CI/CD pipelines using AWS DevOps tools to package and deploy AWS Lambdas and Spring Boot services added Cloud Watch metrics, alarms, structured logs, and Datadog dashboards.

NeverEnding Inc, Cleveland, Ohio, United States

Software Engineer

05/2024 – 03/2025

- Developed interactive features for an animated storytelling platform using ReactJS and Java Spring Boot, deployed via AWS Elastic Beanstalk and RDS, increasing user engagement by 50%.
- Optimized REST APIs in Java Spring Boot to support avatar workflows, creator dashboards, and login flows, reducing backend response errors by 30% and increasing reliability across services.
- Integrated Stripe APIs and webhooks into the backend to automate real-time subscription and billing events, reducing manual operations by 40%.
- Identified and resolved UI, animation, and asset loading issues across React interfaces, collaborating with design and backend teams via GitLab and Discord to accelerate bug fix cycles by 35%.
- Automated QA and code quality pipelines using Junit & Selenium, integrated with GitHub Actions, reducing regression defects by 25% and improving release stability.

Accenture (Client: Lincoln Financial), Hyderabad, India

Custom Software Engineering Associate

10/2022 – 07/2023

- Designed a Spring Boot based rules engine for Lincoln Financial, evaluating insurance eligibility with 95% accuracy based on financial profiles and delivering personalized policy recommendations.
- Deployed RESTful APIs on the AWS Cloud using AWS API Gateway, AWS Lambda, and Elastic Beanstalk to expose rules engine functionalities to internal systems, reducing policy processing time by 30%.
- Guided the transition to a microservices based solution, facilitating clear 50+ pages documentation and training sessions to adopt the new architecture, resulting in a 20% faster feature release cycle.
- Championed test automation and CI/CD using JUnit, Mockito, Jenkins by integrating AI assisted IDEs Sonnet, Claude Code to accelerate development, raise coverage and reduce production errors by 20%.

Tata Consultancy Services (Client : L&T Finance), Mumbai, India

Software Engineer

08/2020 – 09/2022

- Re-architected the NodeJS & Spring Boot based Digital Loan Origination Platform into a microservices ecosystem, scaling to 10k+ daily loan applications with zero downtime and 30% higher throughput.
- Created ReactJS based dashboard for the Loan Platform, enabling real time loan application tracking, document uploads, KYC, document verification, approval status and repayments.
- Integrated REST APIs with credit bureaus, payment gateways, and legacy financial systems, and built Apache Kafka pipelines for real time credit scoring and fraud detection, reducing approval delays by 40%.
- Secured OAuth2 and JWT for API authentication and authorization, with financial security standards. Improved Loan platform observability by integrating ELK Stack and AWS Cloud Watch, reducing mean time to resolution by 35%.
- Implemented error handling, logging, and monitoring mechanisms for production applications, and maintained CI/CD pipelines using Jenkins, automating build, test, and deployment processes, reducing deployment time by 84.5%.

Technical skills

Languages, Databases & Storage: Java, Python, JavaScript, TypeScript, SQL, PostgreSQL, MySQL, MongoDB, Amazon RDS for SQL Server, DynamoDB, Amazon S3

Backend Frameworks & Tools: Spring Boot, NodeJS, Spring MVC, Spring Security, Spring IOC, Hibernate, JPA, Maven, RESTful APIs, Stripe API & Webhooks, SOAP APIs

Front-End Tools & Platforms: HTML5, CSS3, Tailwind CSS, Ajax, XML, React.js, Next.js, Angular, GraphQL, Eclipse, IntelliJ IDEA, Git, Bitbucket, Agile/Scrum, Jira, Discord

Testing & Automation: Postman, Junit, Mockito, TestNG, Selenium WebDriver, REST Assured

Cloud Platforms & Big Data Tools: AWS (Lambda, API Gateway, EC2, S3, RDS, SQS/SNS, EKS), Azure, GCP, Hadoop, Apache Kafka, Apache Spark, Apache Airflow

CI/CD Tools & Monitoring: Jenkins, GitHub Actions, GitLab, Bamboo, Terraform, Docker, Kubernetes, DataDog, Splunk

AI & LLM, Security Auth & OS: GPT, Sonnet, Claude Code, GitHub Copilot, OAuth 2.0, JWT, OWASP, Linux (Ubuntu), Windows Server

Education

University of Missouri-Kansas City

Master of Science in Computer Science

Kansas City, Missouri, USA

08/2023 – 05/2025
