EDUCATION

Master of Science in Computer Science

Jan 2023 – May 2024

Purdue University, Indiana

Bachelor of Science in Computer Science

Jan 2019 – Dec 2022

Purdue University, Indiana

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, HTML/CSS

Frameworks: React, Angular, Node.js, Flask, Django, Bootstrap

Databases: SQL, NoSQL, MongoDB, DynamoDB, Firebase, MySQL, PostgreSQL, Redis

EXPERIENCE

Software Engineer

July 2025 – Present

Golden Home

- Developing internal software tools to digitize and automate the processing of physical patient records, enabling seamless payroll data extraction and eliminating recurring manual entry errors

AI Engineer

Sept 2024 – July 2025

Georgia State University

- Designed and implemented robust RESTful APIs, **reducing model query latency by 35%** for internal LLM research tools
- Accelerated experimentation cycles by 50%** by developing modular API endpoints to automate prompt tuning and inference result retrieval, enabling researchers to run thousands of test cases with minimal input
- Increased LLM accessibility by creating scalable, documented APIs, facilitating adoption by **cross-functional teams**

Full Stack Developer

May 2020 – July 2021

Delta The Innovators

- Implemented secure user authentication and role-based authorization using Django's built-in auth system and JWTs, **fully eliminating authentication errors and security complaints** across production applications
- Communicated directly with clients to scope, plan, and deliver technical solutions by translating complex requirements into actionable development tasks, achieving a **93% client satisfaction rate**
- Reduced onboarding time for client developers by 50%** by documenting API endpoints and usage examples to support frontend development and client handoff

Full Stack Developer

Feb 2016 – Nov 2018

Throms Technologies

- Implemented robust data sanitization routines using SQLAlchemy's parameterized methods, mitigating SQL injection vulnerabilities across all user input forms and **reducing security risks by 40%**
- Optimized slow-loading admin dashboard endpoints by restructuring backend data-fetching logic, **cutting load time from ~3s to under 1.2s**
- Reduced product page load time **by ~1 second** by adding compound indexes to improve retrieval performance

PROJECTS

GeoMarker Navigator | *Android Studio, Firestore*

- Secured user data by structuring **Firestore** with per-user subcollections and enforcing granular read/write access using **Firebase Authentication and Firestore** security rules
- Reduced crash rate across Android 10+ devices by implementing runtime permission checks and relocating **Google Maps API** key securely into XML config
- Improved real-time location sync by enabling **Firestore** offline persistence and batching updates for smoother map rendering
