

---

## EDUCATION

**University of Southern California, Viterbi School of Engineering**  
*Master of Science in Computer Science*

**August 2022- May 2024**  
**CGPA: 3.5/4**

---

## SKILLS

**Frontend Development:** React, Angular, Next.js, Redux, Vue, Tailwind, Swift, WordPress, SPFx, Bootstrap, Figma

**Backend Development:** Node.js, Express, Flask, FastAPI, Django, .NET Core, Go, REST, GraphQL

**Programming Languages:** Python, JavaScript, TypeScript, Java, C/C++, React Native, HTML, CSS, SQL

**DevOps & Cloud:** Git, GitLab, Bitbucket, JIRA, Jenkins, AWS EC2/S3/RDS, Azure, GCP, Docker, Kubernetes, Terraform

**Databases and Analytics:** MySQL, PostgreSQL, SQL Server, MongoDB, Firebase, PowerBI, Tableau, Cognos, R, HDFS, Spark

---

## WORK EXPERIENCE

**Software Development Engineer**, Verizon AI & Data– Texas, United States

**Aug 2024 – Present**

*(Python, PostgreSQL, REST APIs, Pandas, ExcelWriter, AWS EC2/S3/SES, Jenkins, Tableau, YAML, Pytest, Postman, Linux)*

- Engineered scalable Python-based backend microservices with PostgreSQL/PostGIS on optimized Linux environments, enabling real-time 5G network coverage estimation for open-for-sale sites and accelerating go-to-market decisions.
- Developed low-latency, high-throughput data pipelines integrating RESTful APIs and NGINX enabled rapid ingestion and transformation of 10–15 TB of geospatial and telecom data. Built pipelines to populate Tableau Dashboards for CXO level decisions.
- Built modular, object-oriented Python codebases with reusable utilities and YAML-driven configurations to enhance maintainability
- Collaborated with network planning, DevOps, and product teams to deliver production-ready systems under Agile and Waterfall models, ensuring on-time delivery, code quality with extensive experience in handling Raster and Geometry datatypes using PostGIS
- Implemented and optimized complex SQL logic using CTEs, spatial joins, and indexing strategies; improved query response times across core services and reduced compute costs. Developed and scheduled Python cron jobs on AWS EC2 for background tasks.
- Integrated in-house and cloud-based components for service orchestration; ensured system resiliency and consistency through API validations using Postman and automated test suites with Pytest. Developed Validation scripts for Tableau Dashboards.
- Contributed to CI/CD pipelines in Jenkins, automating build, validation, and deployment processes to streamline releases.

**Software Developer Intern – Backend**, RadicalX – Los Angeles, United States

**May 2023 – Aug 2023**

*(Node.js, Firebase, Firestore, MySQL, REST APIs, Jest, GitHub Actions, Stripe, Tango, Postman)*

- Spearheaded backend development using Firebase Cloud Functions and Firestore, supporting 100K+ monthly active users.
- Integrated RadicalX with Node.js, MySQL, and ReactJS across Wildfly, JBoss, and Tomcat servers, ensuring 99.9% uptime.
- Developed automated test suites using Jest, Cypress, and Postman, reducing production bugs and improving release confidence.
- Streamlined RESTful API integrations using JSON/XML and implemented contract testing with Postman and Newman, enabling cross-functional teams to efficiently validate functionality and ensure reliable system communication.
- Optimized Stripe and Tango APIs integrations for 10K+ monthly payments; automated regression workflows using GitHub Actions.

**Assistant Software Engineer**, Tata Consultancy Services – Mumbai, India

**July 2021 – July 2022**

*(Java, JSP, XML, MySQL, J2EE, Windchill PDMLink/MPMLink, JUnit, CAD)*

- Delivered end-to-end software solutions in Java (J2EE) and frontend development in JavaScript (ES6+) and React, MySQL
- Designed, developed, and maintained Java/J2EE modules for enterprise Product Lifecycle Management (PLM) applications, including servlet-based services, EJB components, JSP pages, and database connectivity via JDBC/Hibernate
- Implemented Spring MVC and RESTful services to expose backend functionality, integrating business logic with relational databases and enabling efficient, reusable service layers.
- Built and consumed REST APIs to connect Java backend microservices with React-based UIs, enabling real-time data synchronization, reducing page reloads, and enhancing application responsiveness.
- Applied modern JavaScript (ES6+) techniques—such as async/await, destructuring, arrow functions, and modular component design—while collaborating with cross-functional teams to debug, refactor, and optimize both Java backend and JavaScript frontend code, enhancing scalability, reliability, and reducing technical debt.

---

## PROJECTS

**Attention Span Detection System for Flipped Classroom Teaching**

*(Node.js, FACENET, MTCNN, Redis, Twilio WebRTC, AWS MediaConnect, HTML5)*

- Integrated FACENET and MTCNN for 40–50 FPS facial landmark detection on browsers using Node.js.
- Enabled video lectures for over 10,000 users by streaming via Twilio WebRTC, Redis, and AWS MediaConnect at just 512kbps.

---

## CERTIFICATIONS & ACHIEVEMENTS

- Gold Medalist [Department Rank 1]**, Department of Computer Engineering SIES Graduate School of Technology 2017-2021.
- AWS Certified Developer from October 2023.
