EDUCATION

University at Buffalo, The State University of New York

Buffalo, NY

Master of Science in Computer Science

Jan 2025

University of Mumbai

Mumbai, India

B.E. in Computer Engineering

June 2023

TECHNICAL SKILLS

Front-End: JavaScript (ES6+), React, Angular, TypeScript, HTML5, CSS3, Responsive Design

Back-End Database: Java, Spring Boot, Node.js, Python, SQL (PostgreSQL, MySQL), Hibernate

Tools DevOps: Git, Jenkins, Docker, Kubernetes, AWS (EC2, S3, Lambda), Maven, Agile/Scrum

Testing Concepts: JUnit, Mockito, RESTful APIs, Microservices, OOD, CI/CD, Data Structures

EXPERIENCE

Saayam For All

Remote

Software Developer

June 2025 - Present

- **Engineered an intelligent customer support agent** using **Python** and **LangChain**, integrating a **RAG pipeline** with OpenAI's API to automate responses for 40% of user queries.
- **Implemented semantic search** utilizing a **FAISS vector database** to index documentation, ensuring high-relevance context retrieval for diverse user prompts.
- **Accelerated development velocity by 30%** by utilizing AI-assisted workflows (Cursor, GitHub Copilot) to generate boilerplate code and increase unit test coverage.

CrowdDoing - Nature Counter

Remote

Software Developer

Feb 2025 - June 2025

- **Authored and maintained responsive UI components** using **Angular, TypeScript, HTML5, and CSS3**, collaborating closely with designers to ensure seamless data integration via RESTful APIs.
- **Partnered with backend engineers** to design scalable, event-driven microservices using Java Spring Boot, processing user data for 10k+ users and improving API response time by 25%.
- **Contributed to Agile ceremonies** (grooming, planning, demos) and performed code reviews, ensuring engineering excellence and a 95% on-time feature delivery rate.
- **Maintained high code quality** by writing comprehensive automated tests (JUnit), achieving 90%+ code coverage and ensuring product reliability.

PROJECTS

Distributed Financial Portal (Full Stack)

Tech Stack: React, Java, Spring Boot, PostgreSQL, Docker, AWS

- **Architected a responsive, customer-facing platform** using **React** for the frontend and Java (Spring Boot) for backend microservices, ensuring a seamless user experience.
- **Developed reusable UI components** and implemented secure RESTful APIs for user authentication and transaction processing, creating an intuitive flow for financial management.
- **Containerized application services** using Docker and deployed on AWS, demonstrating cross-functional skills in both development and cloud infrastructure.

Customer Notification Integration Service

Tech Stack: Java, Spring Boot, Kafka, AWS (SNS/SQS)

- **Developed a reusable framework for message templating (HTML)** and routing, significantly reducing the setup time for new customer notifications by 80%.
- **Built a large-scale integration service** to process transactional updates (Email, SMS) for 1M+ users, ensuring reliable delivery of critical customer information.
- **Utilized Kafka and AWS SQS** for asynchronous message queuing, ensuring high throughput and system fault tolerance.

High-Traffic Distributed Key-Value Store

Tech Stack: AWS (Lambda, API Gateway, DynamoDB), Python

- **Architected a high-availability serverless application** on AWS designed to handle 1M+ requests per day, utilizing Lambda for core logic and DynamoDB for storage.
- **Optimized performance** to achieve 150ms latency, demonstrating attention to detail in creating high-performing, scalable experiences.
- **Automated infrastructure provisioning** using CloudFormation (IaC), ensuring consistent and reproducible environments.

ACHIEVEMENTS

Technical Proficiency: Solved 300+ problems on LeetCode, demonstrating strong proficiency in Data Structures and Algorithms.

Leadership: Recognized as a key member of the CodeChef Chapter for successfully organizing coding workshops for over 100 students.
