

Tejaswi Veeramachaneni

Full Stack Developer | tejasveera97@gmail.com | 940-340-9616

PROFESSIONAL SUMMARY

- **7+ years** of IT experience developing, deploying, maintaining, producing, and supporting web-based and client-server applications.
- Expertise in **Agile** and **Waterfall software development processes**. Having a solid understanding of how **SCRUM** works and tracking tools like **JIRA**.
- Experience with **Java/J2EE** technologies such as **Java/J2EE Core Java (Generics, Strings, Exception handling, Collections, Enums and Annotations, etc.), Spring, Spring Boot, Spring Data, Spring IOC, Spring DAO, Spring Security, JDBC, JAXB, JAX-WS, Glassfish**.
- Extensive experience with **HTML5, CSS3, AJAX, Bootstrap, JavaScript, jQuery, JSON, and Angular (2/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18)**.
- Demonstrated expertise in **J2EE Design Patterns** such as **Factory, Singleton, and Prototype**.
- Well versed with Amazon Web Services such as **EC2, ELB, VPC, Route53, Auto Scaling, AMIs, AWS Identity and Access Management, AWS CloudWatch, and Amazon EBS**.
- Strong understanding of the security components of **Spring Security** as well as the authentication and authorization mechanisms, such as **Basic Authentication, OAuth 2.0, and LDAP**.
- Extensive experience in developing Web Services, linked technologies, and frameworks including **WSDL, SOAP, REST, JAX-WS, JAXB, JAX-RPC, AXIS** and **Jersey**, in addition to generating client applications using **Eclipse for consuming Web Services**
- Extensive experience in implementing and managing centralized logging and monitoring solutions using **Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, and Grafana..**
- Hands on experience with **RESTful Web Services**, third-party web services, and **AJAX** for creating dynamic web pages that retrieve content via **APIs**.
- Expertise in developing dynamic web applications over **REST APIs**, responsive web design, and single page architectures.
- Good ability to maintain defect-free websites by handling issues in web browsers in accordance with **W3C standards**.
- Extensive experience with **Bootstrap, Materialize, Semantic UI, and Material-UI component libraries**.
- Solid understanding of **Oracle concepts, stored procedures, triggers, and ORM tools**, such as **Hibernate** and **JPA**, as well as working with named queries and criteria.
- Solid understanding of **DevOps practices**, with expertise in **Terraform, Kubernetes, and Docker** for automating infrastructure provisioning, container orchestration, and streamlining deployment processes
- .Expertise in using **Web and Application Servers** such as **IBM WebSphere, JBoss, Apache Tomcat, and JBoss J2EE**.
- Excellent Working knowledge of **Eclipse, Spring Tool Suite, and Visual Studio Code IDEs**.
- Familiar with Java-based logging frameworks, such as **log4J**.
- Professional level experience in **Oracle , MySQL , and NoSQL** databases such as **MongoDB**.
- Demonstrated knowledge of version control systems, such as **GIT**, and **Continuous Integration/Continuous Development**, such as **Jenkins**.
- Extremely motivated team player with excellent **communication, analytical, documentation and organizational** skills.

TECHNICAL SKILLS

Languages	Java 7/8/11/17, TypeScript
J2EE Technologies	Core Java, J2EE, Servlet, JSP, JDBC, JSTL, Web Services (SOAP and RESTful), XML, ORM(Hibernate), Log4J
Frameworks	Spring, Spring AOP, Spring IOC, Spring Data, JDBC, Spring Boot, Spring Batch, Spring MVC, Spring Cloud.
Web (UI) Technologies	HTML5, CSS3, AJAX, JSON, Angular JS, Angular (2,4,5,6,7,8,9,10,11,12,13,14,15,16,17) and jQuery
Cloud	AWS
Monitoring & logging	Splunk, ELK, Prometheus, Grafana
Web Services	JAX-WS, JAX-RPC, JAX-RS, SOAP, REST, SOAP UI
App/Web servers	Apache Tomcat, WebSphere, WebLogic, JBoss
Development Tools	IntelliJ, Spring Tool Suite (STS), Eclipse, NetBeans
Databases	Oracle, DB2, MySQL, MongoDB, Microsoft SQL Server, Casandra.
Deployment and Build Tools	Jenkins, Maven, Docker, Kubernetes, Terraform
Version Control Tools	Git, SVN, GITHUB
Operating Systems	Windows, iOS, Android

PROFESSIONAL EXPERIENCE

BOK Financial, Tulsa, OK
Full Stack Developer

Sep 2024 – Till Date

- Worked on the **requirements gathering**, analysis, design, and documentation of the application, ensuring alignment with business objectives.
- Managed the implementation of **Agile (Scrum)** methodology, conducting daily scrums, sprint planning, and estimating user stories to optimize development cycles.
- Created and developed **microservices** and **APIs** using **Java 17** with the **Spring Boot** framework, leveraging **Maven** as the build tool and **MongoDB** for database storage.
- Developed **RESTful APIs** for data communication and integrated **Swagger** for API documentation to streamline backend processes.
- Built both **web-based** and **server-side applications** using **Java 17**, enhancing performance and scalability with the latest features.
- Created **RESTful web services** for seamless data communication and integrated them into the microservices architecture.
- Developed **microservices** using **Spring Cloud** and **Netflix OSS components** such as **Eureka Server**, **Zuul**, and **Hystrix** to enable dynamic service discovery, routing, and fault tolerance.
- Implemented **microservices architecture** using **Spring Boot**, **Spring Data JPA**, and **Spring Security** to ensure secure and scalable application components.
- Leveraged **Spring Boot** for rapid development and deployment of cloud-native **microservices** and backend systems.
- Updated **Java 17** applications with new features like **utility methods**, **nested-based access control**, and **lambda parameter enhancements**.
- Integrated **Angular 18** to build dynamic and responsive web applications, utilizing real-time features and **Kafka** for efficient data processing.
- Used **Angular 18** to create interactive user interfaces, enhancing the user experience by processing high-volume data with **Kafka**.
- Applied **Test-Driven Development (TDD)** and **Pair Programming** practices in a **DevOps** environment with **Spring Boot** for continuous improvement and collaboration.
- Developed an adapter to map database records to **POJOs** using **Spring MVC** and **Spring JDBC templates** for seamless data mapping.
- Optimized performance by integrating **Kafka** with **Angular 18**, processing high-volume real-time data efficiently.
- Implemented **Spring WebFlux** to migrate legacy applications to reactive APIs, improving performance and responsiveness.
- Developed **REST APIs** and **microservices** using **Spring DI**, **Autowiring**, **Spring MVC**, and **Spring Boot** annotations.
- Integrated **OAuth 2.0** for secure authentication in the application, eliminating the need for traditional username and password authentication.
- Developed the **Enterprise Architect** schema for the application, ensuring a structured and scalable design.
- Created and implemented robust error handling mechanisms for **Kafka** message consumption in **Angular 18**, improving system reliability.
- Configured **AWS security groups** to act as virtual firewalls, controlling traffic flow to and from **EC2** instances, ensuring system security.
- Streamlined project structuring and build processes by creating and maintaining **Maven's pom.xml** files for dependency management.
- Developed comprehensive **unit** and **integration tests** for both **front-end** and **back-end** components to ensure high-quality deliverables.
- Integrated unit and integration tests into the **Maven** build lifecycle to automate testing and ensure a smooth build process.
- Deployed production applications on **AWS** using **Elastic Beanstalk**, **RDS**, **EC2**, **S3**, and **RDS**, ensuring high availability and scalability.
- Created **CRUD REST APIs** using **POST**, **GET**, **PUT**, and **DELETE** methods to interact with the **MongoDB** database.
- Implemented **MongoDB** as the **NoSQL** database and designed the user interface for efficient data storage and retrieval.
- Developed **Jenkins** pipelines to automate continuous integration and deployment, improving the overall DevOps workflow.
- Created and integrated multiple connected **microservices** using **REST endpoints**, ensuring system modularity and scalability.
- Utilized **Git** for version control and **JIRA** for project tracking and issue management in an Agile environment, ensuring smooth collaboration and project progress.
- Integrated **Prometheus** for **monitoring** and **Grafana** for **visualizing** metrics, enabling proactive system monitoring and troubleshooting.

- Containerized applications using **Docker**, building lightweight, consistent environments for development, testing, and production.
- Managed containerized application deployments with **Kubernetes**, orchestrating and scaling microservices for improved resilience and availability.
- Used **Kubernetes** for automating deployment, scaling, and management of containerized applications, ensuring high availability and fault tolerance.
- Implemented **Terraform** for **Infrastructure as Code (IaC)** to provision and manage cloud resources on **AWS**, including EC2, S3, and RDS, automating infrastructure deployment and ensuring repeatability.
- Managed **AWS** infrastructure with **Terraform**, automating the creation of resources like **EC2 instances**, **S3 buckets**, and **RDS databases**, improving deployment consistency and efficiency.

Environment : Java 17, Spring Boot, Spring Cloud, Spring Data JPA, Spring Security, Angular 18, Kafka, MongoDB, Prometheus, Grafana, Docker, Kubernetes, Terraform, AWS (EC2, RDS, S3, Elastic Beanstalk), Maven, Jenkins, Git, JIRA, Swagger, OAuth 2.0, RESTful APIs, REST Assured, Swagger, Appium, TypeScript, Maven, Postman, GitHub

Proag Insurance, Amarillo, TX

Jun 2023 – Aug 2024

Full Stack Developer

- Assisted with the analysis, design, development, and testing of an application using **SCRUM AGILE methodologies**.
- Added processing capability to the pipeline process using **Advanced JDK 17 features** such as **Lambda**, **filters**, and **predicates**.
- Implemented **Spring Boot**, **Spring Data**, **Spring AOP**, and **Spring IOC** in application components.
- Added **Spring Framework AOP** module for application logging to obtain information about the application's status.
- Constructed front-end applications using **HTML5**, **CSS3**, **TypeScript**, **Angular 13/15**, **Angular Material**, **AJAX**, **XML**, and **JSON**.
- Developed microservice systems using **Spring**, **Spring Boot**, and **Spring Cloud**.
- Utilized **AWS IAM** to create users, groups, and roles. In addition, permissions may be granted to groups and users.
- Implemented **RESTful Web Services** using the **JAX-RS API**. Developed a **REST over HTTP Web Service** to facilitate communication between applications.
- Implemented **AWS** solutions using **EC2**, **S3**, **RDS**, **EBS**, **Elastic Load Balancer**, **Auto Scaling Groups**, and **optimized volumes**.
- Used **Angular Ngx** and **Typescript** to modularize the application to enhance its reusability and consistency.
- Used in the application for **handling responsive layouts**, **grids**, and **reusing** component components to make sure that it was mobile-friendly.
- Implemented and managed the **ELK Stack** (Elasticsearch, Logstash, Kibana) for centralized logging, real-time monitoring, and data visualization across the application stack.
- Utilized the component-based architecture provided by **Angular 13/15** to create **Typescript reusable** components and services that consume **REST APIs**.
- Created custom **Logstash** filters to parse and transform log data, ensuring logs were structured for efficient querying in **Elasticsearch**.
- Added authorization codes, implicit authorization, and client credentials to the Rest APIs using **OAuth 2.0** standard authentication.
- Developed reusable templates by utilizing third-party libraries using **NPM (Node JS)**.
- Interacted with the backend and consumed **JSON** using **RxJS observables**.
- Developed a database application for storing **JSON-like dynamic connections** using **MongoDB**, a **NoSQL** database.
- Created and consumed web services using **JAX-RS (REST)** and **CXF framework**.
- Created **robust error handling** mechanisms in **Angular** for **Kafka** message consumption.
- Designed and implemented microservices using **Spring Boot** and **REST APIs**, and documented them with Swagger.
- Ensured the **Java 17** applications running on **Tomcat** were installed, configured, and diagnosed.
- Downloaded the **Maven** dependencies and created **Pom.xml files**.
- Used **Git** as **version control** and frequently pushed code to **GitHub**.
- Configured the environment and container build instructions using **Dockerfiles**.
- Created **REST** endpoints to connect our team's microservices.
- Tracked, assigned, and resolved tickets in defect tracking systems, and fixed defects in the **QA** environment during user acceptance testing with **Jira Tool**.

Environment: Java 17, Spring, Spring Boot, Microservices, Spring Data JPA, Spring Cloud, Spring IOC, Spring AOP, OAuth 2, Angular 13/15, TypeScript, Node JS, Angular CLI, NPM, Angular Material, RxJS, Ajax, JSON, AWS, EC2, S3, IAM, Apache Tomcat Server, Rest API, MongoDB, Maven Jenkins, JAX-RS, HTTP, GITHUB, Kafka, Docker, Jira, Agile, Windows.

Clematis Technology Solutions, Hyderabad, India

Jan 2021 – Mar 2023

Full Stack Developer

- Implemented the **AGILE-SCRUM** software development process.
- Developed a robust, web-based application using **Java/J2EE technology**.
- Used **Spring Core**, **Spring AOP**, **Spring MVC**, **Spring Batch**, **Spring IOC**, and **Spring Security** to develop web applications. Developed the application with **Spring Tool Suit (STS) IDE** and **Maven** build automation.

- Created dynamic user interface components that are **modular** and **reusable**.
- Implemented an efficient workflow for setting up projects and generating code using **Angular 10/11**.
- Developed and implemented microservices using **Spring Boot**.
- **Validated data** using **Angular** validation and custom functions.
- Developed a Java 11 implementation for each component, including lambdas expressions, time APIs, streams, functional interfaces, collectors, default methods, and type interfaces, in order to comply with **Java 11** features.
- Utilised the **Angular lifecycle** hooks to manage component initialization, change detection, and cleanup functions within the component.
- Implemented observables and observers for handling asynchronous data streams using **RxJS**.
- Utilized **RxJS** operators and Observables to intercept and manipulate **HTTP** requests and responses.
- Developed applications **utilizing Spring, Spring-Data, Spring Boot, and Oracle**.
- Managed entity collections efficiently in the application state by implementing **NgRx Entity**.
- **Created and retrieved** incident information using restful web services implemented with spring boot.
- Implemented **Spring Batch** for managing transactions and logging/tracing large volumes of records.
- Configured the application's logs with **Spring AOP Programming**.
- **Developed and deployed** the application with **Maven** on embedded Tomcat using Maven extensively.
- Managed AWS services via **Amazon Lambda APIs** using **Java APIs**.
- Implemented and managed **Splunk** for centralized log aggregation, monitoring, and real-time analysis of system and application logs.
- Implemented **Spring Boot** in **Java 11** to develop and deploy **REST APIs** and microservices.
- Added server-side auto-logout functionality with **Spring Boot**.
- **Used Node.js in order to build server-side applications**.
- Set up **Splunk Alerts** to proactively notify teams about critical events such as system failures, performance issues, or security threats.
- Built **REST APIs** using **Spring Boot** is one of my areas of expertise.
- **Developed** applications, **debugged** them, **integrated** them with other applications, and deployed them using **STS** extensively.
- Contributed to the development of the **GIT repository** by maintaining the source code.
- Designed the **Oracle database** with all the tables we needed.

Technologies Used: Java 11, JSP, JSON, Spring Boot, Spring IOC, Spring MVC, Spring AOP, Spring Batch, Spring ORM, Spring-Data, Angular 10/11, Angular CLI, HTML5, Bootstrap, HTTP, Node.JS, Microservices, Splunk,AWS, STS, RESTful Web Services, Apache Tomcat, JMS, Agile, Maven, GIT, Oracle, SQL, Log4j, JIRA, Windows.

Tech Vedika Software, Hyderabad, India

Sep 2018 – Dec 2020

Full Stack Developer

- Implemented microservice architectures and **J2EE** specifications to gather requirements, analyze, and design the project.
- Developed **J2EE** design patterns such as **Business Delegate, Front Controller, MVC, View Helper, Session Facade, Value Object, DAO, Service Locator, Singleton, Adaptor, and Factory Methods**.
- Implemented **Spring Boot CRUD** functionality by migrating an existing application to a **REST based microservices** architecture using microservices.
- Utilized Spring **MVC architecture, presentation logic** and **business logic** were separated.
- Implemented **IOC/DI** for **Spring Beans** and configured **Spring Container** to manage their life cycle.
- Utilized **Spring framework** with **Dependency Injection (DI)** or **Inversion of Control (IOC)** annotations for bean references.
- Implemented **RESTful** services to consume and publish **JSON Web Services**.
- Developed a **Java API** that interacts with **Amazon SQS** for bulk emailing purposes through the use of an **API** API.
- Utilized **Spring AOP** and dependency injection extensively when interacting with various modules using Spring MVC flow.
- Used **Eclipse** for **IDE** and debugging as well as editing and modifying the application. For accessing the **database, DAO and JDBC** were used.
- Employed **OAUTH 2 (REST service authentication)** in our application as a secure means of communicating with other protected resources by exchanging access tokens instead of usernames and passwords.
- Used tools such as **Log4J** for logging purposes.
- Performed contract data maintenance tasks using **Oracle Stored Procedures and Triggers**, as well as **JDBC**.
- Utilized **HTML5, CSS3, TypeScript, AJAX, JSON, Angular 6/7, and Bootstrap** for front-end web programming, UI design, and layout.
- Created a **single page application (SPA)** using **Angular 6/7** and implemented a client-side **MVC architecture**.
- Developed new components and some packages using **Angular CLI**, including **PrimeNG, Angular Material, and Bootstrap**.
- Tested the **RESTful API** using **Postman** for **HTTP GET, POST, and PUT requests**.
- Analyzed reusability, performed code reviews, performed performance tuning, refactored, debugged, and investigated issues from users.

- Tracked work assignments, defects, and changes in **JIRA**.
- Maintained the quality of the product by repairing application defects.

Environment: Java 8, Spring, Spring Boot, Microservices, Spring JDBC, Spring IOC, Spring AOP, Spring DI, Spring MVC, Angular 6/7, TypeScript, Angular CLI, NPM, HTML5, CSS3, Bootstrap, AJAX, DOM, AWS, SQS, Apache Tomcat Server, Eclipse IDE, JSON, POSTMAN, HTTP, Jira, Log4j, Jenkins, Agile, Windows.
