

TEJASWI KONDA

(913) 337-1763 | tejaswikonda487@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

- Experienced Full Stack Developer with 4 years of expertise in developing scalable microservices and APIs using **React, Python and Django** with integrated **SQL-based** data access for efficient backend functionality and persistence.
- Passionate about writing efficient, clean code and delivering robust solutions within agile environments.

TECHNICAL SKILLS

Programming Languages	: Java(8/11/17), Python, JavaScript, C, C#, SQL
Data Structures And Algorithms	: Trees, Graphs, Dynamic Programming, Hashing, Recursion, Sorting
Web Development	: HTML5, CSS3, SASS, Bootstrap, ReactJS, NodeJS, ExpressJS
Databases	: MongoDB, PostgreSQL, SQL Server, MySQL
Cloud technologies	: AWS, GCP, PCF
Testing	: Jest, Enzyme, Postman
Other skills & tools	: Docker, Kubernetes, JIRA, Slack, Visual Studio, IntelliJ, Postman

WORK EXPERIENCE

University of Central Missouri
Graduate Assistant

Missouri, USA
Mar 2024 - May 2025

- Contributed to the development of student portal application, a centralized platform designed to streamline advisor appointment scheduling for university students and faculty. The portal allows students to book appointments, view faculty availability, and manage academic information, enhancing accessibility and reducing manual coordination.
- Developed this responsive student portal using **React.js**, enabling streamlined advisor appointment scheduling for university students and faculty, **reducing scheduling time by 40%**.
- Implemented modular architecture by integrating **React.js** with a **Python Django backend**, improving application performance and maintainability, resulting in faster load times.
- Optimized UI components and state management in **React.js**, enhancing user engagement and reducing UI errors during peak usage periods.
- Developed secure RESTful APIs in **Django Rest Framework(Python)** with **JWT-based authentication and role-based access control**, and integrated **Celery with Redis** for asynchronous event-driven communication, enabling non-blocking frontend operations, reliable processing of appointment requests, and scalable handling of high user traffic.
- Executed end-to-end tests during the build and deployment lifecycle, ensuring frontend reliability and smooth updates.
- Conducted code reviews and peer programming sessions, fostering collaborative learning and maintaining high code quality standards.

Kyndryl
Software Engineer

Hyderabad, India
June 2022 - Dec 2023

- Contributed to the design and development of the Transaction Switch platform at Kyndryl, enabling mobile

recharge, digital SIM distribution, identity management, and real-time rewards for telecom operators such as Aliv (Bahamas) and MTN Group.

- Built a cross-platform mobile application using **React.js** for *Aliv Telecom Operator*, enabling customers to seamlessly manage prepaid, postpaid, and broadband plans.
- Designed and optimized **SQL** queries and database schemas to handle SIM activation, and inventory tracking, enabling reliable backend operations in the digital SIM distribution ecosystem.
- Developed a digital SIM distribution ecosystem using **Python Django (backend)** and **React.js (frontend)**, deployed for **MTN Telecom Group** and multiple other operators.
- Engineered a reporting engine leveraging **Apache Spark** with **Python(PySpark)** for distributed data processing, enabling analysis and visualization of large-scale transactional data.
- Implemented an Identity Management System with **Django Rest Framework(Python)**, **JWT authentication and role based access control**, providing encrypted, stateless, token-based single sign-on/off across applications in the ecosystem.
- Researched and evaluated caching strategies to implement an optimized **LRU cache** using **Python's functools.lru_cache and OrderedDict** for image storage, improving performance and memory efficiency.
- Built a transaction processing system that handled both historical and live data streams, enabling operators to define reward criteria and automatically award customers in real-time.
- Worked with **DevOps tools and practices (CI/CD, Jenkins, Git)** to automate builds, streamline deployments, and ensure effective version control across various projects.

Aviksoft

Software Engineer Intern

Hyderabad, India

Jan 2021 - Jun 2022

- Worked on **Application Performance Management (APM)** solution that provides end-to-end visibility into application performance and the end-user experience. It supports transaction mapping, root-cause analysis, and integrates components such as **CEM, Introscope EM, and IntroscopeAgent** for comprehensive monitoring and diagnostics.
- Developed a test application using **Node.js** to evaluate the performance and functionality of an application monitoring tool, simulating real-world workloads.
- Created simulators for generating sample transactions and user activity, allowing testing of monitoring, logging, and performance metrics.
- Implemented **backend endpoints** to mimic application behavior and handle simulated requests, supporting evaluation of monitoring dashboards and alerts.
- Worked on designing and optimizing **MySQL** queries and assisted in managing database schemas, helping improve data consistency and query performance for development tasks.
- Supported deployment and testing of applications on **AWS services** such as **EC2 and S3**, thereby gaining hands-on experience with cloud infrastructure and monitoring tools.
- Collaborated with teammates to run test scenarios and analyze results, contributing to performance optimization and reliability assessments.

EDUCATION

Masters in Computer Science

University of Central Missouri, Warrensburg, Missouri

Jan 2024 - Aug 2025

Bachelors in Electronics and Communications Engineering

Sphoorthy Engineering College, Hyderabad, India

Aug 2018 - May 2022
