EDUCATION

Master of Science: Data Science, University at Buffalo, The State University of New York

Jan 2023 - Jun 2024

- Coursework: Machine Learning, Time series Analysis, Probability and Statistics, Data Visualization, Statistical Data Mining, Data Model Query Language, Data Intensive Computing, Analysis of Algorithms

SKILLS

Programming Languages & Databases: Python, SQL, R, MongoDB, NoSQL, Java, SAS, Linux

Data Engineering: ETL, Data pipeline optimization, Apache Spark, Snowflake, Databricks

Machine Learning & AI: Regression, Classification, Clustering, Support Vector Machines, Decision Trees, Random Forests, XGBoost, PCA, NLP, Transfer Learning, A/B Testing, Anomaly Detection, Ensemble Methods, Time Series Analysis, Hypothesis Testing, Predictive Analytics, Data Mining

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Tableau, Excel, Qlik

Frameworks: MapReduce, TensorFlow, PyTorch, Keras

Cloud & Tools: AWS (EC2, S3, Redshift, SageMaker, Lambda), Google Cloud Platform, Azure, Docker, Kubernetes, Apache Airflow

Version Control & Collaboration: Git, JIRA, SCRUM, Agile methodology

Generative AI: LLMs, GPT, Llama, GANs, RAG, Vector Databases

Certifications: Azure AI Fundamentals, Machine Learning, SQL for Data Analysis, Salesforce AI Associate, Tableau Training

WORK EXPERIENCE

Data Scientist | University of Delaware | Newark, DE

Aug 2024 - Present

- Improved material property prediction accuracy by 11% using advanced neural network models and cross-validation techniques, driving innovation in sustainable material development and enhancing research outcomes significantly.
- Crafted and deployed scalable machine learning pipelines in AWS SageMaker, automating 45% of manual processes, reducing operational inefficiencies, and enabling faster data-driven decision-making for research teams.
- Developed a unified data platform that integrates real-time data streams, improving collaboration across research teams by 20%, and fostering a more efficient and cohesive research environment.
- Identified factors impacting recyclability using statistical methods, optimizing protocols, and boosting testing efficiency by 32% for sustainability.

Data Scientist | Rebecca Everlene Trust Company | Chicago, IL

Jan 2024 - May 2024

- Enhanced customer retention rates by 22% through the deployment of clustering algorithms and personalized recommendation systems using TensorFlow and PyTorch, driving improved user engagement and satisfaction.
- Deployed generative models such as GANs and VAEs to synthesize user data for personalized recommendations, resulting in a 12% increase in customer engagement metrics across the platform.
- Automated ETL processes using Python and Apache Spark, reducing data preparation time by 19%, improving reporting efficiency, and enabling faster delivery of actionable insights to stakeholders.
- Designed interactive dashboards in Power BI to monitor AI model performance, enabling a 20% improvement in decision-making for internal stakeholders through real-time analytics and visualization tools.

Data Scientist/ ML Engineer | Accenture Solutions Pvt. Ltd | Hyderabad, India

Jul 2021 - Dec 2022

- Analyzed medical claims data to identify patterns and reduce processing errors, achieving a 16% decrease in claim rejections and improving overall operational efficiency in healthcare systems.
- Activated predictive models using Python to forecast patient outcomes, improving care management strategies by 10%, enhancing patient satisfaction, and optimizing resource allocation for healthcare providers.
- Engineered and fine-tuned large language models to support automated document processing workflows, reducing manual effort by 32%, streamlining operations, and increasing productivity.
- Created interactive dashboards using Tableau to monitor healthcare KPIs, enhancing decision-making efficiency by 25% for stakeholders through clear visualization of critical metrics.

Data Analyst | National Small Industries Corporation | Hyderabad, India

Mar 2020 - Jun 2021

- Built machine learning models improving loan default prediction accuracy by 22% and automated SQL validation processes, reducing data preparation time, ensuring better decision-making for financial institutions.
- Conducted time-series analysis on financial datasets to uncover trends, providing actionable insights that supported strategic investment decisions and long-term business growth objectives for financial teams and stakeholders.

Junior Data Analyst | BSNL | Hyderabad, India

Sep 2019 - Dec 2019

- Implemented deep learning models to analyze network traffic patterns, improving anomaly detection accuracy by 30%, ensuring network security, and reducing downtime caused by undetected issues for improved reliability.
- Optimized ETL pipelines using Apache Spark, reducing data processing times by 25%, and designed scalable data solutions to enhance network performance monitoring systems, improving operational efficiency by 18% for clients.

PROJECTS

Gold Price Analysis using ARIMA and Exponential Smoothing

- Introduced gold price forecasting using ARIMA and Exponential Smoothing, utilizing 80.76% of data for training and achieving accurate predictions. Demonstrated ARIMA's effectiveness in capturing complex patterns, providing more reliable forecasts than Exponential Smoothing

Railway Reservation and Management System

- Orchestrated database schema with advanced indexing using SQL to enhance query performance and data accuracy. Formulated a user-friendly web interface with HTML and CSS for checking train availability and seat status, improving operational efficiency and user experience.

Waze User Churn Prediction

- Assembled and executed a Flask web application with Python and PyTorch to predict user churn for Waze, utilizing machine learning models and exploratory data analysis. Enhanced user retention by implementing data-driven strategies, improving engagement and reducing churn.
