Education

University of Central Missouri

Aug 2023 – May 2025

Master of Science in Computer Science, GPA: 3.5/4.0

Lees Summit, MO

- **Coursework:** Cloud Computing, Machine Learning, Big Data Analytics, , Advance Operating Systems, Compiler design and construction, Information Assurance, Programming Foundations, Advance Computer Networks,

Jawaharlal Nehru Technological University Hyderabad

Aug 2019 – Jun 2023

Bachelor of Technology in Computer Science and Engineering, GPA: 8.4/10.0

Jagtial, India

- **Coursework:** Machine Learning, Python, Artificial Intelligence, Data Structures and Algorithms, Operating Systems, Object Oriented Programming, Database Management Systems, Compiler Design

Experience

Machine Learning Intern

June 2022 – August 2022

One Stop Solutions

Hyderabad, India

- Engineered and deployed three classification models (Spam Mail Detection, Diabetes Prediction, Iris Classification) using Python, Pandas, and scikit-learn, demonstrating high-performance predictive analytics across different domains.
- Implemented a spam email classifier using natural language processing and supervised models (Naïve Bayes, Logistic Regression), achieving **95%+** accuracy.
- Designed an Iris species classification tool using KNN and ensemble methods, attaining **100%** accuracy on benchmark datasets
- Handled REST API deployment with Apache Tomcat, supporting **99.9%** server uptime during testing and go-live phases.
- Optimized data preprocessing and visualization pipelines using Matplotlib and seaborn, accelerating model evaluation and feature selection by **40%**.

Technical Skills

Languages: C, Python, Java, JavaScript, HTML, CSS, SQL

Libraries & Frameworks: ASP.NET, Node.js, ReactJS, REST API, Django, TensorFlow, Keras, Scikit-learn, OpenCV

Developer Tools: Git, Docker, AWS, Azure, Visual Studio, MySQL, MongoDB.

Skills: Web Development, OOPS, Machine Learning, API Development, Database Designer.

Projects

Laptop Price Prediction

Nov 202 – Dec 2022

- Collected a publicly available dataset from Kaggle containing specifications of **1,300+** laptops, including brand, processor, RAM, storage, and price, and performed thorough data cleaning and normalization to handle missing, inconsistent, and categorical values.
- Conducted feature engineering and one-hot encoding to transform raw data into structured inputs, improving model performance and reducing noise during training.
- Performed exploratory data analysis (EDA) to uncover trends and pricing patterns using Matplotlib and Seaborn, leading to better feature selection and business insight extraction.
- Evaluated multiple regression models (Linear Regression, Decision Trees, Deep Learning) and finalized a Random Forest Regressor, achieving a mean absolute error (MAE) under **6%** on test data.
- Built a modular ML pipeline and saved trained models using Pickle (.pkl) files to enable easy reuse and deployment via an interactive Jupyter Notebook interface.

AI-Based Missing Person Finder

April 2023 – May 2023

- Developed a computer vision-based AI model to identify and track missing individuals using facial recognition and pattern detection algorithms.
- Integrated machine learning models (e.g., CNNs) to improve matching accuracy and detection rate based on visual input from public and law enforcement databases.
- Reduced false positives by **30%** with iterative training and feedback loops .
- Employed OpenCV and deep learning frameworks to process and analyze images and videos for real-time identification.
- Enhanced system accuracy over time using feedback loops and model retraining, contributing to a scalable and adaptive missing person tracking tool.

Online Tours and Travels

Nov 2023 – Dec 2023

- Developed a cloud-based travel booking system using AWS services including RDS (MySQL), Lambda, API Gateway, EC2 and S3 to enable secure and scalable customer and administrator functionality.
- Implemented RESTful APIs with AWS API Gateway and Lambda for travel booking, vehicle info, and user management, enhancing modularity and serverless compute efficiency.
- Deployed the frontend on AWS EC2 and integrated it with backend APIs, ensuring real-time interaction for booking confirmation, notifications, and admin dashboard operations. .
- Enabled monitoring and security using AWS CloudWatch for logging Lambda/API events and IAM for controlled access management across all cloud resources.
