EDUCATION

Clarkson University

Masters in Data Science

July 2023 - May 2025

Kalasalingam University

Bachelors in CSE honors in AI and ML

May 2019 - May 2023

SKILLS

Backend Software Engineer, C++, Java, Python, Go, asynchronous pipelines, database schema design, RPC handlers, cross-functional collaboration, privacy and security, API development, on-call rotation, collaborative team environment, synchronous/asynchronous systems, database systems, AWS, Linux, software design, project ownership, Commerce Engineering

WORK EXPERIENCE

Clinivantage Healthcare Solutions Pvt Ltd

Remote

Healthcare Forecasting & Anomaly Detection Technical Lead

May 2020 - Jan 2022

- Architected RESTful APIs processing 2M+ daily healthcare transactions with 99.9% uptime, ensuring HIPAA compliance while enabling seamless cross-system integration.
- Designed secure RPC handlers for distributed healthcare systems, collaborating with cross-functional teams to reduce API latency by 40% while maintaining 99.99% reliability.
- Built ARIMA/Prophet pipelines with CUDA-accelerated Python, slashing prediction latency from 4hrs to 15mins and improving forecasting accuracy by 25%.
- Collaborated on LSTM-autoencoder anomaly detection implementation, mitigating fraudulent insurance claims by 40%, resulting in \$250K monthly savings.
- Resolved data processing bottlenecks by optimizing PySpark ETL workflows, reducing costs by 35% through database system enhancements and asynchronous pipeline design.

Healthcare AI Research Lab

Remote

Edge-Optimized ML Systems Engineer

March 2022 - Jan 2025

- Designed and built DICOM-compatible CNN pipeline with Python, achieving 92% accuracy and reducing diagnosis time from 24hrs to 5mins across 3 rural clinics.
- Designed RESTful APIs with 99.9% uptime for DICOM data exchange, processing 200+ requests/minute while maintaining HIPAA compliance and end-to-end encryption.
- Collaborated with clinicians to implement feedback loops, improving model accuracy by 12% quarterly via active learning with 98% clinician approval rate.
- Led database schema design and asynchronous processing pipeline implementation, reducing data latency by 65% while maintaining 99.9% system reliability.
- Resolved critical issues through cross-functional collaboration, reducing cloud costs by 20% via SageMaker autoscaling and Spot Instance orchestration.

PROJECT EXPERIENCE

Clarkson University

Potsdam, NY

Traffic Data Analysis & Backend Engineering Lead

07/2023 - 04/2024

- Designed and implemented scalable PySpark ETL pipelines on AWS EMR, optimizing data partitioning for 5TB+ traffic datasets, reducing latency by 40% and saving \$15K monthly.
- Collaborated with cross-functional teams to develop secure API gateway with OAuth 2.0, handling 500+ requests/second with 99.9% uptime while ensuring GDPR compliance.
- Architected fault-tolerant C++ microservices for real-time traffic prediction, achieving 99.99% reliability and 30ms response times across distributed systems.
- Resolved critical performance bottlenecks in asynchronous data processing systems, reducing inference time to 50ms on AWS P3 GPUs and decreasing urban congestion by 18%.
- Led cross-functional collaboration with product managers and researchers, implementing Python/Firebase engagement solutions that increased user participation by 40%.

Clarkson University

Potsdam, NY

Backend Software Engineer - Predictive Maintenance System

06/2024 - 06/2025

- Designed and implemented RESTful APIs with Python FastAPI, enabling secure data exchange between sensors and dashboard with 99.9% uptime and 45% reduced latency.
- Collaborated with cross-functional teams to architect database schema, enhancing data privacy while reducing query time by 60% across maintenance systems.
- Engineered asynchronous pipelines using PySpark and TensorFlow, identifying equipment failures with 92% precision and reducing unplanned downtime by 30%.
- Led development of Streamlit dashboard for real-time visualization, enabling technicians to prioritize high-risk assets and cutting inspection costs by 35%.
- Owned end-to-end development of CNN-LSTM model predicting equipment lifespan (MAE: 8 days), automating retraining with Airflow and deploying on Azure.

CERTIFICATES

- Googler

Feb 2022
