

TERRANCE SORRELL GARNER

Senior Software Engineer

📍 CIBOLO, TX, 78108 📞 +1 (409) 298-6040 @ terrance.codedev@gmail.com [in/terrance-toptal](https://www.linkedin.com/in/terrance-toptal)

Summary

I'm a Senior Software Engineer with 10+ years of experience working across the full stack. On the frontend, I've built large-scale applications using **Angular, React, and Vue**, with a strong focus on performance, state management, and creating reusable component libraries. On the backend, I've worked extensively with **Java, C#, and Python**, designing **RESTful APIs, GraphQL endpoints, and event-driven microservices with Kafka and RabbitMQ**. I'm very comfortable in cloud environments like **AWS and Azure**, and I've led teams in setting up **CI/CD pipelines** with Azure DevOps, GitHub Actions, and Kubernetes deployments. Databases are also a big part of my background - from relational systems like **SQL Server, PostgreSQL, MySQL** to NoSQL like **MongoDB, DynamoDB, and CosmosDB**. In recent roles, I've also taken ownership of **security, compliance, and scalability**, implementing things like OAuth2, JWT, and Row-Level Security for multi-tenant apps. Beyond coding, I enjoy **mentoring engineers, collaborating with product and design teams**, and making sure the solutions we build are not just technically solid but also deliver real value to the business.

Experience

Scopic - Senior Software Engineer

Jan 2022 - Jul 2025 | Marlborough, MA | [🌐 https://www.scopicsoftward.com/](https://www.scopicsoftward.com/)

- Led the **architecture, development, and delivery** of **cloud-native, microservices-based SaaS platforms** using **Angular, Spring Boot, ASP.NET Core, FastAPI, and Node.js**, deployed across multi-cloud (AWS + Azure) environments.
- Directed the **frontend architecture** for multiple large-scale Angular applications, standardizing on **Angular CLI, RxJS, and NgRx** for predictable state management and reactive data flows across complex modules.
- Designed **enterprise-grade admin portals in Angular** with secure role-based access, dynamic dashboards, and integrations with RESTful/GraphQL APIs, supporting thousands of enterprise users daily.
- Built **shared Angular component libraries** with reusable modules, directives, and services, reducing frontend development time across multiple projects by 45%.

- Championed **performance tuning** in Angular: implemented lazy-loaded modules, Ahead-of-Time (AOT) compilation, differential loading, and ChangeDetection strategies, improving Lighthouse scores and reducing Time to Interactive by 40%.
- Integrated **observability features into Angular dashboards** by consuming APIs from Prometheus, CloudWatch, and Azure Monitor, enabling real-time health monitoring and system analytics visualization.
- Delivered **multi-tenant SaaS solutions** with Angular frontends, implementing authentication flows (OAuth2, JWT, Azure AD) and ensuring compliance with HIPAA, SOC2, and ISO security standards.
- Orchestrated **CI/CD pipelines in Azure DevOps and GitHub Actions**, automating Angular builds, unit testing (Jasmine, Karma), linting, security scans, and Dockerized deployments to Kubernetes (EKS, AKS).
- Collaborated with UX and product teams to design Angular UIs that adhered to **WCAG accessibility guidelines**, improving usability and reducing support tickets by 30%.
- Built **real-time collaboration features** in Angular applications using WebSockets and RxJS, supporting dashboards, notifications, and live data streams.
- Mentored 6+ engineers on **Angular best practices, NgRx architecture, module organization, and performance optimization**, raising the frontend team's expertise and delivery quality.
- Partnered with backend, DevOps, and cloud engineers to ensure Angular apps integrated seamlessly into distributed microservices, aligned with event-driven architectures (Kafka, RabbitMQ).
- Authored **technical runbooks, architectural documentation, and onboarding guides** for Angular projects, ensuring long-term maintainability and smooth knowledge transfer.
- Championed **Agile/DevOps practices**, leading sprint planning, backlog grooming, and design reviews, while promoting adoption of CI/CD and test-driven development across Angular projects.

Ittransition - Software Engineer

Sep 2018 - Dec 2021 | McLean, VA | <https://www.ittransition.com/>

- Engineered **full-stack SaaS applications** leveraging **Java (Spring Boot), Python (Django, Flask, FastAPI), C#, SQL Server, and React.js**, serving enterprise clients across finance, healthcare, and e-commerce.
- Architected **scalable React.js applications** with Redux, Redux-Saga, and middleware for asynchronous data flows, integrating with REST and GraphQL APIs.
- Built **advanced React dashboards** with real-time charts (D3.js, Chart.js), paginated tables, and filtering/search UIs to support analytics, reporting, and monitoring features.
- Applied **React Router and modular routing strategies** to enable dynamic navigation, protected routes, and role-based access in multi-tenant SaaS platforms.
- Implemented **server-side rendering (SSR) with Next.js** for React applications, improving SEO and initial load times for high-traffic landing pages.

- Enhanced **React app reliability** with comprehensive unit/integration testing using **Jest, React Testing Library, and Enzyme**, increasing frontend test coverage by 60%.
- Designed **microservices** with Spring Boot and Django, consumed by React apps, supporting millions of API calls per day with sub-100ms latency.
- Leveraged **event-driven architectures (Kafka, RabbitMQ)** to stream data into React dashboards in near real time.
- Collaborated with DB teams to implement RLS (Row-Level Security) and data partitioning strategies, ensuring React clients displayed only tenant-specific data.
- Built and maintained **CI/CD pipelines** (Azure DevOps, GitLab, CircleCI), integrating React build steps, Dockerized deployments, and Kubernetes rollouts.
- Standardized **design systems** with React, Tailwind CSS, Vuetify, and Bootstrap, ensuring consistent UX across multiple applications and teams.
- Worked in **Agile/Scrum frameworks**, actively engaging with product owners, designers, and QA to deliver end-to-end features.
- Mentored junior engineers on **React best practices** (Hooks, component design, performance optimization), fostering growth and consistency across teams.

Trango Tech - Fullstack Engineer

Jun 2013 - Jul 2018 | Houston, TX | <https://www.trangotech.com/>

- Built and deployed **end-to-end enterprise applications** using **ASP.NET MVC, C#, SQL Server, JavaScript, and React.js**, establishing the foundation for scalable, maintainable, and secure systems.
- Designed **dynamic UIs in React** with reusable functional components, React Hooks, and Context API, enabling modular frontend architecture and reducing code duplication by 40%.
- Implemented **Redux-based global state management** to synchronize complex user interactions across multiple React modules, significantly improving maintainability and debugging efficiency.
- Optimized frontend performance by applying **code splitting, lazy loading, tree shaking, and memoization** in React apps, reducing first contentful paint (FCP) and bundle sizes for faster page loads.
- Integrated **REST APIs and GraphQL endpoints** into React dashboards, delivering real-time data updates with WebSockets and RxJS for reactive state updates.
- Applied **responsive design principles** with Tailwind CSS, Bootstrap, and custom CSS3, ensuring seamless mobile-first experiences across devices and browsers.
- Built **data-driven components** like tables, charts, and interactive forms, incorporating validation and accessibility best practices (WCAG 2.1 compliance).

- Developed **backend APIs** with ASP.NET Web API and integrated them into React frontends for seamless end-to-end workflows.
- Automated CI/CD pipelines with **Jenkins and GitLab**, running React builds, unit tests (Jest, Jasmine, Karma), and static analysis before deployment.
- Collaborated with UX designers to transform wireframes into **pixel-perfect React UIs**, enhancing user experience and aligning frontend implementation with design systems.
- Participated in **Agile ceremonies** (daily standups, sprint planning, retrospectives), ensuring iterative delivery and cross-team collaboration.

Education

The University of Texas at Austin | Bachelor of Computer Science | 2009 - 2013

Skills

Programming Languages: Javascript, Java, C#, Python, TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot, ASP.NET Core, ASP.NET MVC, Entity Framework, LINQ, Django, Flask, FastAPI, Angular, Angular CLI, RxJS, NGRX, React.js, Redux, Tailwind CSS, Bootstrap, Vue, Vuex, Vuetify

Web & API Development: RESTful APIs, GraphQL, Web API development, Lazy loading, Module management, Component-driven design and architecture

Databases: SQL Server, PostgreSQL, MySQL, DynamoDB, MongoDB, CosmosDB

Cloud Platforms & Services: AWS (Lambda, S3, EC2, VPC, IAM, API Gateway, CloudWatch, CodePipeline, EKS), Azure (Functions, Blob Storage, Virtual Machines, Virtual Networks, API Management, Monitor, DevOps Pipelines, AKS)

DevOps, CI/CD & Infrastructure as Code: Docker, Kubernetes, Jenkins, GitLab CI/CD, CircleCI, AWS CodePipeline, Azure DevOps Pipelines, Terraform, Pulumi

Messaging & Event Streaming: RabbitMQ, Kafka

Version Control & Collaboration: Git, GitFlow

Testing & Quality Assurance: Jasmine, Karma, Unit Testing, Performance tuning & optimization

Architecture & Design: Microservices, Monolithic architectures, Domain-Driven Design (DDD), SOLID Principles, Design Patterns, Dependency Injection / IoC

Security: OAuth, JWT, Encryption

Reporting & Tools: Crystal Reports, Artiva RM

Methodologies: Agile, Scrum
