

Tharun K
Senior Java Full Stack Developer
Mobile: 484-500-2217
E-mail: tharunchary725@gmail.com

PROFILE SUMMARY

- Highly accomplished and detail-oriented Java Full Stack Developer with 5+ years of progressive experience in designing, developing, and deploying full-stack web applications across e-commerce, healthcare, and enterprise platforms.
- Adept at working across all layers of the software development lifecycle—from UI/UX design and REST API development to backend architecture, cloud deployment, and performance optimization.
- Proficient in Java 8/11+, Spring Boot, Spring MVC, Hibernate, and RESTful services on the backend, along with strong frontend expertise in Angular, React, JavaScript, HTML5, and CSS3.
- Demonstrated success in designing and developing microservices-based solutions that are scalable, maintainable, and secure.
- Experience building CI/CD pipelines using Jenkins, containerizing applications with Docker, and deploying them on Kubernetes clusters hosted on AWS and GCP.
- Possesses strong analytical skills, an in-depth understanding of object-oriented design, and a collaborative spirit, having worked closely with cross-functional teams, including DevOps, QA, UI/UX, and Product Management in Agile/Scrum environments.
- Passionate about building clean, reusable code, implementing best coding practices, and delivering seamless user experiences.

TECHNICAL SKILLS:

Languages	Java, JavaScript, TypeScript, SQL, HTML5, CSS3
Back-End	Java 8/11, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA
Front-End	Angular, React.js, Bootstrap, Material UI
Web Services	RESTful APIs, JSON, Swagger/OpenAPI
Databases	MySQL, PostgreSQL, MongoDB
Tools & DevOps	Git, Maven, Jenkins, Docker, Kubernetes, JIRA, Postman
Cloud	AWS (EC2, S3, RDS), Azure, GCP
Testing	JUnit, Mockito, Jasmine, Karma
Version Control	Git, GitHub, Bitbucket
CI/CD & Monitoring	Jenkins, Docker, SonarQube, Prometheus

Professional Experience

Role: Senior Java Full Stack Developer

Client: Blue Sheild of California

Oakland, California

Mar '2024 – Till Date

Key Responsibilities:

- Designed and developed end-to-end web applications using Spring Boot (microservices) and Angular 13, enabling real-time claims tracking and secure member portal access.
- Implemented OAuth2.0 and JWT authentication for secure access and role-based authorization across services.
- Developed RESTful APIs to support CRUD operations, integrated with frontend components via Angular services and interceptors.
- Utilized Swagger/OpenAPI for documenting APIs and facilitated API consumption across business units.

- Wrote custom Angular directives, pipes, and reusable components, improving code maintainability and user experience.
- Integrated MySQL and Oracle databases for transaction and member data storage with JPA/Hibernate for ORM mappings.
- Containerized all microservices with Docker, configured with Helm charts, and deployed to Kubernetes clusters.
- Utilized AWS EC2 and RDS for hosting backend services and data stores; managed object storage using S3 buckets.
- Implemented global exception handling, logging (SLF4J + Logback), and validation strategies in Spring Boot applications.
- Collaborated with Product Owners, Business Analysts, and UI Designers to translate requirements into technical solutions.
- Conducted code reviews, performance tuning, and unit testing (JUnit/Mockito) to ensure code quality and reliability.
- Tracked work using JIRA, and maintained project documentation, API references, and version history using Confluence.

Environment: Java 11, Spring Boot, Angular 13, AWS EC2/S3/RDS, Docker, Kubernetes, MySQL, Jenkins, Git, JIRA

Client: CVS Health, Woonsocket, RI

Sep' 2022 – Feb' 2024

Role: Java Full Stack Developer

Key Responsibilities:

- Developed high-performing web applications for internal operations and pharmacy tracking using Spring MVC and Angular 11.
- Created and optimized complex SQL queries and stored procedures in PostgreSQL, improving data retrieval times by 30%.
- Integrated RESTful web services for data exchange between frontend Angular modules and backend Spring services.
- Implemented Angular reactive forms and client-side validations to ensure secure and error-free user interactions.
- Developed interactive dashboards and dynamic reports using Angular and Chart.js for executive-level reporting.
- Automated application deployments using Jenkins pipelines, enabled containerization with Docker, and versioned builds using Maven.
- Refactored monolithic Java applications into loosely coupled microservices, improving scalability and release agility.
- Monitored application health and logs using Spring Actuator, and integrated centralized logging with ELK Stack.
- Managed application security with Spring Security, incorporating CSRF protection, custom authentication providers, and session timeouts.
- Participated in all phases of the Agile development lifecycle, led sprint demos, and collaborated in daily Scrum standups.

Environment: Java 8, Spring MVC, Angular 11, PostgreSQL, REST API, Jenkins, Docker, Bitbucket, JIRA

Client: Flipkart, Hyderabad, Telangana

Jan' 2020 – Apr' 2022

Role: Java Developer

Key Responsibilities:

- Developed scalable e-commerce microservices for order management and product listings using Java 8, Spring Boot, and MySQL.
- Built React.js components for responsive and user-friendly UI, utilizing Redux Toolkit for efficient state management.
- Designed and implemented Kafka-based messaging between order services and warehouse systems for real-time updates.
- Performed unit and integration testing using JUnit, Mockito, and Postman for API validations.
- Migrated legacy JSP/Servlet-based applications to modern Spring Boot + React architecture.

- Troubleshoot critical issues in production environments and worked closely with the DevOps team to apply hotfixes and release patches.
- Used Git for source control, managed repositories and merge requests, and maintained release notes and versioning.
- Developed CI/CD pipelines with Jenkins, enabling rapid and automated deployments across dev, staging, and production.
- Integrated payment gateways and third-party APIs (e.g., Razorpay, Twilio) for order confirmation and customer notification.
- Used JWT tokens for secure authentication and built custom user roles and permissions in backend services.

Environment: Java 8, Spring Boot, React.js, Redux, Kafka, MySQL, AWS, Git, Jenkins
