EXPERIENCE

Software Developer | PresGroup Inc

Feb 2022 - Present

- Delivered a fully automated CI/CD pipeline, this lead to one-click deployments and removal of manual steps, by spearheading Terraform adoption across services.
- Enabled targeted sales outreach, as measured by a **20%** reduction in time sales team spent reviewing customer profiles, by generating user metadata via Google Cloud Tasks and SQL aggregation.
- Lifted sales planning effectiveness, as measured by a **10%** increase in customer reach-out KPIs, by building inventory reporting tools for the sales team.
- Accelerated API performance, as measured by an **81%** reduction in average query response time, by coordinating an endpoint rewrite that reduced table joins, streamlined queries and created indexes.
- Improved access control, leading to smoother reviews and fewer assignment mistakes, by migrating database permissions and refactoring user-permission assignment flows.
- Increased production resilience, leading to more scalable and maintainable services, by modernizing Express.js data structures to reduce coupling and ease horizontal growth.
- Shortened support cycles, as measured by a **13%** faster response time, by initiating weekly user sessions to capture feedback and roll best-practice improvements.

TECHNICAL SKILLS

Languages | Javascript, TypeScript, Golang, HTML, CSS, Bash

Frameworks | NodeJS, NextJS, PostgreSQL, MongoDB, MySQL, Golang, REST, HTTP

DevOps | Terraform, GCP

Testing/Deployment | Jest

Developer Tools | Docker, Git, npm, Github Copilot, Cursor

OPEN SOURCE PROJECTS

Code Racer

- Raised PR throughput, as measured by daily (vs. weekly) maintainer reviews, by running contributor learning sessions on Git/GitHub best practices.
- Reduced production-critical bugs by **12%**, by triaging issues and shipping targeted hotfixes quickly.
- Multiplayer coding game where developers can compete against each other to see who can type the code the fastest developed using **NextJS**, **Tailwind**, and **TypeScript**.

SOFTWARE PROJECTS

Health Tracker

- A Web application where multiple users can log how they felt for the day. Each user's data is private and users can log in via Google OAuth.
- Developed entries feed so users can see chronologically all their mood entries over time, the application was created using **NextJS**, **trpc**, and **MySQL**
