
Uba Obasi

(919) 520-7982 | u.obasi12@gmail.com | Raleigh, NC

Python Developer & Software Engineer with 5+ years' experience building automation scripts, data pipelines, and web scraping tools. Skilled in Python, Google Cloud Composer, and MuleSoft API integration. Adept at deploying scalable solutions on GCP and AWS, with a strong track record of problem-solving, attention to detail, and delivering results in fast-paced, cross-functional teams.

EDUCATION

East Carolina University
BS in Computer Science

Greenville, NC
Aug. 2016 – May 2020

SKILLS AND CERTIFICATIONS

- **Programming & Scripting:** Python, Java, SQL
 - **Cloud Platforms:** Google Cloud Platform (GCP), Amazon Web Services (AWS)
 - **ETL & Integration Tools:** Google Cloud Composer, Informatica, MuleSoft (Anypoint Studio)
 - **API & Testing Tools:** Postman, SoapUI
 - **Monitoring & Logging:** Splunk
 - **Middleware & ESB:** MuleSoft
 - **Development Practices:** Agile, Scrum, SDLC
 - **Other Tools:** JIRA, GitHub
 - Cross-functional teamwork, Peer mentoring
 - **Certifications:**
 - AWS Certified Solutions Architect – Associate (2023)
 - MuleSoft Certified Developer (2023)
-

EXPERIENCES

Software Developer
Pearson Education

Apr. 2021 – Aug. 2025
Raleigh, NC

- Designed and developed data processing pipelines using Python, orchestrated via Google Cloud Composer, for tasks including data extraction, transformation, cleansing, and automated reporting.
- Developed and deployed REST APIs using MuleSoft Anypoint Studio, integrating data across enterprise systems and managing workflows via MuleSoft ESB.
- Built and maintained ETL pipelines with Informatica, supporting large-scale data movement and transformation across cloud and on-prem environments.
- Used Informatica to monitor job executions, debug failures, and implement recovery strategies to ensure successful pipeline runs.
- Wrote complex SQL queries for data validation, transformation, and performance tuning across multiple relational databases.
- Conducted end-to-end API testing using Postman and SoapUI to ensure functionality, security, and performance of services.
- Monitored system health and troubleshooting application performance issues using Splunk, identifying root causes and proposing fixes.

Technical Analyst
Xerox

Jun. 2020 – Jan. 2021
Raleigh, NC

- Supported the company's Medication Assistance Program for senior citizens, ensuring accurate and timely processing of prescription benefit requests.
- Created Python scripts to streamline repetitive data-entry and validation tasks, reducing processing time by 20% and minimizing errors.
- Managed and updated large datasets, applying SQL queries for data extraction, cleansing, and reporting.
- Collaborated with cross-functional teams to enhance workflow efficiency, integrating automation tools into daily operations.
- Monitored and troubleshooted system performance issues, escalating and resolving technical incidents to maintain service-level agreements.
- Documented processes and trained new team members on technical tools, data entry systems, and compliance requirements.

QUALIFICATIONS

- Designing and developing scalable automation and data processing solutions using Python.
- Proficient in building, deploying, and orchestrating ETL workflows on cloud platforms using Google Cloud Composer and Informatica.
- Hands-on experience developing and managing RESTful APIs using MuleSoft Anypoint Studio and integrating enterprise services via ESB.
- Skilled in using cloud platforms such as Google Cloud and AWS for deployment, monitoring, and scaling of data pipelines and applications.
- Strong background in API testing and validation using Postman and SoapUI.
- Experienced in extracting, transforming, and loading (ETL) large volumes of data and performing data quality checks and cleansing using Python and SQL.
- Proficient in analyzing system and application logs using Splunk to identify issues and optimize performance.

Collaborative team player with a solid understanding of Agile/Scrum practices
