

SUMMARY

Results-driven Data Analyst with 4 years of experience delivering actionable insights through data analytics, data visualization, and predictive modeling. Proficient in **Python** (Pandas, NumPy, Scikit-learn) and **SQL** (MySQL, PostgreSQL) for data extraction, wrangling, and analysis. Skilled in building real-time dashboards using **Tableau** and **Power BI**, and optimizing data pipelines with **AWS (Redshift, S3) and Azure Synapse Analytics**. Adept at translating complex data into clear insights for both cross-functional and non-technical stakeholders, supporting strategic decision-making. Strong in data governance, machine learning, and **ETL** tools such as Informatica. Experienced in **Agile environments**, collaborating across teams to solve business problems.

EXPERIENCE

Data Analyst

PNC Bank | TX, USA | Jan 2024 – Present

- Led **predictive analytics** on 2 million+ financial records using **SQL** and **Python** (Scikit-learn) to enhance client risk models.
- Designed **financial dashboards** in **Tableau** visualizing revenue and expense trends, supporting strategic decision-making.
- Optimized SQL queries in **MySQL**, improving data retrieval speed and reducing reporting times by 25%.
- Developed and implemented **ETL pipelines** using **AWS S3 and AWS Glue** to integrate data from multiple sources.
- Utilized **Jira** for sprint planning, task tracking, and cross-functional coordination in **Agile** environments.
- Built forecasting models using **SQL** (MySQL) to predict customer transaction volumes, enhancing financial planning.

Data Analyst

United Health Group | Hyderabad, India | Jul 2020 – Aug 2022

- Automated **data extraction and transformation** using **Python** (Pandas, NumPy) and **SQL**, processing 1 million+ patient records, improving reporting efficiency.
- Developed interactive **dashboards** in **Power BI** providing real-time insights into hospital resource utilization, leading to better decision-making.
- Optimized **Azure Synapse Analytics** and **ADLS** for data storage, improving query performance for the internal **data warehouse**.
- Conducted **A/B testing** and **regression analysis** with Python (Scikit-learn) to evaluate new treatment protocols, resulting in improved healthcare decisions.
- Collaborated in **Agile teams** and documented workflows in **Jupyter Notebooks**.

PROJECTS

Exploratory Data Analysis on NBI Data | Python, Pandas, NumPy, Tableau | Oct 2022 – Nov 2022

- Analyzed 110,000+ National Bridge Inventory (NBI) records using Python and SQL to uncover structural trends and support infrastructure decision-making.
- Cleaned and preprocessed data by handling missing values, outliers, and inconsistencies, using techniques such as imputation, normalization, and transformations with Python (Pandas and NumPy).
- Performed **exploratory data analysis** (EDA) using statistical methods and visualizations to identify key patterns and trends, and presented insights through interactive **Tableau dashboards**.

TECHNICAL SKILLS

- **Languages:** Python (Pandas, NumPy, Scikit-learn), SQL (MySQL, PostgreSQL, T-SQL, PL/SQL)
- **Data Analysis:** Data Wrangling, **Predictive Analytics**, Statistical Analysis, **Machine Learning** (Random Forest, K-Means, SVM), A/B Testing, Regression Analysis
- **Visualization:** Tableau, Power BI, Microsoft Excel (Pivot Tables, VLOOKUP)
- **Databases:** MySQL, PostgreSQL, Oracle, MongoDB, AWS Redshift, **Snowflake**
- **Cloud Platforms:** AWS (Redshift, S3, Lambda), Azure, Google Cloud Platform (BigQuery)
- **ETL Tools:** Informatica, Talend, AWS Glue
- **Methodologies:** Agile (Scrum)
- **Version Control:** Git, GitHub

EDUCATION

NorthWest Missouri State University | Maryville, MO | GPA: 3.80/4.00 | Aug 2022 - Dec 2023

Master of Science in Applied Computer Science
