## PROFILE

---

Full Stack Developer with 2+ years of experience building scalable, containerized web applications in the healthcare domain using Java Spring Boot, Angular, and React.js. Skilled in developing end-to-end solutions from frontend interfaces (JavaScript, TypeScript) to backend microservices and APIs, with hands-on deployment on AWS and automation via CI/CD pipelines (Jenkins, Docker, Git). Experienced in Agile SDLC practices, observability, and cross-functional collaboration. Pursued a Master's in Data Science with a strong foundation in cloud computing, algorithms, and distributed systems.

## PROFESSIONAL EXPERIENCE

---

### Software Engineer, Capgemini

Jun 2021 – Jun 2023

- Engineered scalable microservices for 3 healthcare modules using **Java**, **Spring Boot**, and **Angular**, ensuring reliability, fault-tolerance, and 90% uptime, which improved patient data management and responsiveness under peak workloads.
- Implemented secure **RESTful APIs** integrating microservices with **frontend** apps, reducing data latency by 25% and improving system interoperability and customer experience across healthcare platforms.
- Modernized non-optimized healthcare UIs by crafting responsive, modular components with **Angular**, **React.js**, **HTML5**, **CSS3**, and **TypeScript**, improving cross-device usability and boosting user engagement metrics by 20%.
- Enhanced observability and code quality by conducting static analysis via **SonarQube**, reducing technical debt by 30% and improving maintainability of distributed systems.
- Automated testing frameworks using **JUnit**, **Mockito**, and **Python**-based validations, achieving 95% coverage; streamlined CI/CD pipelines (**Jenkins**, **Git**), reducing release cycles and improving delivery speed.
- Containerized applications with **Docker** and deployed on **AWS EC2** with **S3** for storage and CloudWatch monitoring, ensuring scalable, resilient, and cost-optimized cloud deployments.
- Improved DevOps practices by standardizing coding principles, leading code reviews, and enforcing object-oriented design, reducing critical defects by 45% and improving scalability.
- Collaborated with product owners, QA, and cross-functional teams in **Agile** sprints to gather requirements, resolve blockers, and deliver stakeholder demos, resulting in a 25% improvement in sprint velocity and on-time project delivery.

### Software Engineer Intern, Capgemini

Jan 2021 – May 2021

- Developed **Spring Boot microservices** with **JWT-based Spring Security** integrated into **SQL Server**, handling 10,000+ daily transactions securely and improving processing efficiency by 40%.
- Modernized non-responsive healthcare frontends with **AngularJS**, increasing mobile accessibility by 60% and user engagement by 45%.
- Enhanced **SQL Server** query optimization and indexing, reducing retrieval times by 30% and improving application performance.
- Applied **Python** for backend validation and **unit testing**, cutting data inconsistencies by 25% and strengthening the reliability of data pipelines.

## PROJECTS

---

### Health Risk Prediction Using Wearables and Deep Learning

Feb 2025 – Apr 2025

- Developed an **LSTM**-based risk prediction system using multivariate time-series data from 100 synthetic wearable users, integrating RNN and gradient boosting models to predict heart, stress, and sleep risks with 0.88 F1-score.
- Built and optimized **data pipelines** to preprocess over 1M rows of minute-level heart rate, sleep, and activity data, improving processing speed by **40%**, and created **Power BI** dashboards to visualize personalized risk trends for clinical insights.

## SKILLS

---

**Languages & Frameworks:** Java 17+, Spring Boot, Spring WebFlux, Python, JavaScript, TypeScript, HTML5, CSS3, SQL

**Frontend:** Angular 2+, AngularJS, React.js, Bootstrap

**Backend & Tools:** REST APIs, MongoDB, MySQL, Git, Maven, SonarQube, Tomcat, Docker, Kafka, RabbitMQ, Hibernate

**Analytics & Data:** NumPy, Pandas, Power BI, Tableau, Hypothesis Testing, A/B Testing

**DevOps & Cloud:** CI/CD, Jenkins, Git, Observability, AWS, Hadoop, Spark

## EDUCATION

---

University Of Texas at Arlington, Master of Science in Data Science

Aug 2023 – May 2025

GPA:4.0
