SUMMARY

Full-Stack Developer with 3+ years of experience in building scalable web applications and cloud solutions using React, Django, and AWS. Skilled in REST APIs, microservices, CI/CD, and databases (MySQL, PostgreSQL, MongoDB) with a strong focus on performance, security, and user-centric design.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, JavaScript, SQL, NoSQL

Web & Application Development: React.js, Django, Django REST Framework, Flask, FastAPI, HTML, CSS, REST APIs

Tools : Git, Docker, Kubernetes, Jenkins, GitHub Actions, Postman, VS Code, IntelliJ, Jira, Eclipse, OpenAI, LangChain

Databases & Cloud: MySQL, PostgreSQL, MongoDB, AWS (EC2, IAM, S3, Lambda, RDS, CloudWatch)

WORK EXPERIENCE

Full Stack Developer | George Washington University, DC

Feb 2024 – May 2025

- Built a full-stack Equipment Management System using **React**, **Django**, and **MySQL**, improving asset tracking by 40%
- Enabled secure check-ins by integrating student ID scanning with **Firebase Auth** for contactless equipment access
- Hosted application on **AWS EC2** for scalable, reliable deployment with minimal downtime and high availability
- Utilized **AWS RDS MySQL** for secure, high-performance database access with automated backups and high availability
- Set up CI/CD pipelines with **GitHub Actions** to automate testing and deployment, accelerating feature delivery
- Created unit and integration tests with **Pytest** and **Jest**, boosting reliability and reducing post-deployment bugs by 35%
- Implemented usage reports and activity logs for administrators, increasing resource planning efficiency by 45%
- Followed **Agile** practices with **Jira** to manage sprints, ensuring timely feature delivery through stakeholder feedback

Software Engineer | Microland, Karnataka, India

June 2021 – July 2023

- Developed **microservices** and **APIs** using **Django REST Framework**, improving response time 30% under increased load
- Integrated Python backends with React, streamlining development and reducing delivery time by 25%
- Implemented authentication, access control, and validation with **Django auth/permissions & OAuth2**, reducing vulnerabilities by 40%
- Utilized **Django ORM** for persistence in **PostgreSQL**, optimizing queries and ensuring transactional integrity
- Managed CI/CD with **Jenkins**, automating tests, deployments, and cutting release cycles by 50%
- Used **Docker** to containerize applications, enabling consistent environments across development, testing, and production
- Integrated third-party APIs, payment gateways, and cloud services into Python applications to enhance functionality

PROJECTS

E-Commerce Web Application

- Built an e-commerce web app with **React**, **Django**, and **MongoDB**, featuring authentication, cart, and order flow
- Developed an admin dashboard for managing inventory, monitoring orders, and controlling access to streamline operations
- Deployed the application on **Kubernetes** for scalable orchestration and high availability across containerized services
- Implemented secure payment integration using Stripe API, enabling real-time transaction handling and confirmations

Real-Time Chat Application

- Developed a chat app using **Django Channels** and **WebSockets**, enabling asynchronous handling and live updates
- Enabled WebSocket messaging with group broadcasting, using ASGI to manage connections and deliver updates
- Integrated front-end and back-end for real-time interaction using WebSocket clients and **Django templates**
- Implemented message persistence with **Django ORM** and **PostgreSQL** to store chat histories and retrieve archived sessions

AI Meeting Summarizer

- Built a serverless pipeline converting meeting audio into transcripts and abstractive summaries with structured action items.
- Applied **OpenAI Whisper** for transcription and **GPT-4o** with chain-of-thought **prompting** for accurate summarization.
- Designed a Summarizer + Verifier agent loop in **LangChain** to enforce factual grounding and reduce hallucinations.

EDUCATION

The George Washington University

August 2023 – May 2025

Master's degree in Computer Science

Washington, DC

- Coursework:** Software Engineering, Design & Analysis of Algorithm, Cloud Computing, Database Management Systems, Advanced Software Paradigms, Computer System Architecture, Big Data & Analytics, Data Mining

KL University

August 2018 – July 2022

Bachelor's degree in Computer Science and Engineering

Guntur, India
