EDUCATION

University of Washington

Seattle, WA

Bachelor of Science in Informatics, Concentration: Software Development

Graduation: Dec 2025

Cumulative GPA: 3.86

Coursework: Data Structures and Algorithms, Server-Side Dev, Client-Side Web Dev, Databases and Data Modeling

WORK EXPERIENCE

Software Engineer Intern

June 2024 – August 2024

Samsung SDI

Suwon, South Korea

- Designed and implemented scalable data pipelines in Python using Pandas and NumPy to process over 800 million EV battery records for performance analysis and XGBoost-based defect prediction.
- Reduced data processing time from 40 seconds to under 10 seconds by applying Scikit-learn regression, Pandas interpolation, and outlier removal, enhancing input reliability and prediction accuracy.
- Visualized time-series driving data using Matplotlib and Seaborn to extract key insights, create intuitive dashboards, and support decision-making within the Data Intelligence department.

Software Engineer Intern

April 2024 – June 2024

DEEPNOID

Seoul, South Korea

- Developed and optimized a Python image preprocessing pipeline using PIL and PostgreSQL to resize, compress, and Base64-encode over 10,000 high-resolution X-ray images, preparing datasets for AI model training.
- Automated image resolution adjustment and format conversion, reducing dataset preparation time by 50% and cutting data handling overhead by 30%, contributing to operational cost reduction.
- Engineered a structured metadata management system with PostgreSQL, eliminating manual tracking and enabling efficient image data retrieval for subsequent AI development cycles.

LEADERSHIP EXPERIENCE

Full-stack Software Developer | *UW Capstone (continuation of Boeing-sponsored project)*

Dec 2024 – June 2025

- Led a team of 5 to rebuild Boeing's DevSecOps platform, increasing chapter completion rate from 25% to over 90% by developing a certificate system and progress tracking dashboard that recognize knowledge demonstration and incentivize continued learning, using JavaScript, Jekyll, Firebase, and MDX.
- Published as open-source to provide free, accessible DevSecOps education globally.

PROJECTS

Crossly | *Node.js, Express, MongoDB, and ReactJS*

March 2025 - June 2025

- Built a full-stack learning platform with crossword puzzles and flashcards, designing REST API endpoints and MongoDB schemas while implementing scalable backend services to boost student engagement and retention.
- Architected and deployed the application on Microsoft Azure, securing it with HTTPS and ensuring scalable cloud performance in an Agile development environment.

Renu | *ReactJS, Tailwind CSS, Firebase, Google Maps API*

Feb 2025 – March 2025

- Hack the Globe 2025 Hackathon — Hosted by Boston Consulting Group (BCG)
- Created an e-commerce solution that enables users to discover and purchase discounted short-dated or returned products, reducing consumer waste and promoting UN Sustainable Development Goals.
- Built real-time product search and CO₂ savings tracking with Firebase services and Google Maps integration.

Base Converter | *Java, Spring Boot, Swagger, and PostgreSQL*

March 2024 - May 2024

- Developed a RESTful API for base conversion (binary, octal, decimal, hexadecimal) using Spring Boot.
- Used PostgreSQL for conversion history storage and Swagger for auto-generated API documentation.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, HTML, CSS, SQL, R

Developer Tools: Git, AWS, Docker, Azure, Firebase, Postman, JUnit, Linux, MS Excel

Libraries & Frameworks: ReactJS, NextJS, NodeJS, Spring Boot, Express, Flask, Pandas, NumPy, Scikit-learn, Matplotlib, MATLAB, Tableau, PostgreSQL, MongoDB

Languages: English, Korean
