PROFESSIONAL SUMMARY

- Java Full Stack Developer with nearly **5 years of experience** designing, developing, and deploying scalable enterprise applications using **Java, Spring Boot, and modern frontend frameworks (React/Angular)**.
- Strong expertise in building **RESTful microservices architectures**, implementing secure authentication and authorization using **Spring Security and JWT**.
- Hands-on experience developing responsive, user-friendly UIs using **React, Angular, TypeScript, HTML5, and CSS3**, ensuring cross-browser compatibility and performance optimization.
- Proficient in **cloud-native application development on AWS**, including containerization with **Docker** and orchestration using **Kubernetes**, along with CI/CD pipelines (Jenkins, GitHub Actions).
- Experienced in working with **relational and NoSQL databases** (PostgreSQL, MySQL, MongoDB) and optimizing queries for high-performance applications.
- Strong background in **Agile/Scrum environments**, collaborating with cross-functional teams, performing code reviews, and delivering high-quality, production-ready solutions on schedule.

TECHNICAL SKILLS

Programming Languages: Java (8/11/17), JavaScript (ES6+), TypeScript, SQL

Backend Technologies: Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate, JPA, RESTful APIs, Microservices

Frontend Technologies: React, Angular, HTML5, CSS3, Bootstrap, Material UI

Databases: PostgreSQL, MySQL, MongoDB, Oracle

Cloud Platforms: AWS (EC2, S3, RDS, EKS, Lambda)

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD Pipelines

Messaging & Streaming: Apache Kafka

Testing Tools: JUnit, Mockito, Selenium, Postman

Build & Version Control: Maven, Gradle, Git, GitHub

Monitoring & Logging: ELK Stack, Prometheus, Grafana

Development Methodologies: Agile (Scrum), SDLC

PROFESSIONAL EXPERIENCE

Client: Anthem, USA

Feb 2025 – Present

Role: Java Full-Stack Developer

Key responsibilities:

- Lead development of customer-facing insurance portal microservices using **Java 17, Spring Boot 3**, Spring Security, and JWT for secure authentication and role-based access.
- Built responsive front-end modules in **React + TypeScript** with Redux for state management; implemented accessibility improvements and optimized bundle size (code splitting & lazy loading), improving page load by **~35%**.
- Implemented event-driven integration with Kafka for claims update streams and used Redis for session caching — reduced database read load by **~40%**.
- Owned CI/CD pipelines using **GitHub Actions** and container image builds; automated deployments to AWS EKS with Helm charts and Terraform for infra provisioning, enabling one-click staging deployments and **30% faster** release cycles.
- Added structured logging and observability using ELK and **Prometheus/Grafana** dashboards; implemented SLO alerts routed to Slack and PagerDuty to reduce incident MTTR.
- Collaborated with product and QA to define API contracts (OpenAPI/Swagger), wrote integration tests (JUnit + Mockito), and performed performance tuning for critical endpoints.

Tech: Java 17, Spring Boot 3, Spring Security, Spring Cloud, Hibernate, React, TypeScript, Redux, Kafka, Redis, PostgreSQL, Docker, Kubernetes (EKS), Helm, AWS (S3, EC2, RDS, EKS), Terraform, GitHub Actions, ELK, Prometheus, Grafana, JUnit, Mockito.

Company: Wipro, India

Jan 2021 – Jul 2023

Role: Java Full-Stack Developer

Key responsibilities:

- Developed enterprise features for B2B web applications using **Java 8/11**, Spring Boot 2.x, and Hibernate. Implemented RESTful APIs consumed by both Angular and React front-ends, depending on the project.
- Delivered front-end modules with **Angular (v10–12)** for internal admin dashboards and **React** for customer portals; improved UI test coverage via component unit tests and E2E scenarios.
- Containerized applications using **Docker** and introduced Jenkins pipelines for build/test/deploy; contributed to initial Kubernetes adoption and created Helm charts for consistent deployments.
- Migrated monolithic modules into microservices, decoupling heavy transaction processing into smaller services and enabling independent scaling. Reduced latency on high-traffic endpoints by **~25%**.
- Implemented database optimizations (**Postgres/MySQL**), wrote stored procedures where appropriate, and used Redis for caching to boost throughput.
- Participated in agile ceremonies, code reviews, and mentored junior developers in best practices (clean code, TDD).

Tech: Java 8/11, Spring Boot 2.x, Hibernate/JPA, REST, Angular (10–12), React, TypeScript, Maven, Jenkins, Docker, Kubernetes, PostgreSQL, MySQL, MongoDB, Redis, Git, JUnit, Mockito.

Company: NVIDIA, India

Aug 2019 – Dec 2020

Role: Java Developer Intern

Key responsibilities:

- Interned on a backend team, contributed to Java services using **Java 8**, Spring Boot (intro), and REST APIs to support internal tooling and data pipelines.
- Implemented feature endpoints, wrote unit tests, and performed integration with **MySQL databases** and basic message passing (**RabbitMQ / in-process queues**) for asynchronous tasks.
- Used **Git** for source control, participated in daily scrums, and helped onboard documentation for the team's **microservice templates**.
- Delivered a small utility that automated repetitive deployment steps; reduced manual deployment time for interns and developers.

Tech: Java 8, Spring Boot, JDBC, MySQL, Git, Maven, Unit testing (JUnit), basic Linux shell scripting, Agile.

EDUCATION:

Master of Science in Computer Science | Lamar University, Beaumont, TX 77705 | Aug 2023 – May 2025

Bachelor of Technology in Computer Science | Vignan Institute of Engineering for Women, Affiliated to JNTU Kakinada, India
