SUMMARY

Software Engineer with 2+ years of experience delivering scalable web applications and efficient software systems. Skilled in React, Python, Java, and AWS, with expertise in SDLC execution, API development, and cloud integration. Passionate about building maintainable, high-impact solutions that enhance user experience.

EDUCATION

Stevens Institute of Technology | Hoboken, New Jersey

Sept 2023 – May 2025

Master of Science, Computer Engineering

Coursework: Machine Learning, Computer Architecture, Data Structure & Algorithm, Data Acquisition, Modeling Analysis in Deep Learning

GITAM University | Hyderabad, India

June 2017-July 2021

Bachelor of Technology, Computer Science

Coursework: OOP with C++, Database Management systems, Data Mining and Data Warehousing, Web Technologies

WORK EXPERIENCE

Community Dreams Foundation | United States

Aug 2025 - Present

Software Engineer

- Partnered with stakeholders to gather requirements and define system functionality, translating needs into modular Java and .NET code that reduced feature turnaround time by 28%, saving \$50K annually by minimizing repetitive engineering hours
- Architected, integrated, and tested scalable software components during full SDLC cycles, implementing QA plans and system upgrades that reduced recurring production defects by 35% and cut support costs \$40K while ensuring compliance with project standards

Solar Secure Solutions | India

Feb 2023 – July 2023

Full Stack Developer

- Designed responsive admin dashboards and modular UI components with React, Node.js, and Firebase, reducing load times by 40% and enabling operations teams and clients to monitor KPIs faster across three high-traffic platforms
- Orchestrated scalable Express.js APIs with MongoDB and automated blog publishing workflows using Firebase Firestore and React Hooks, reducing backend duplication 60% and streamlining content updates while cutting debugging time by 45%

Corizo | India

Aug 2022 – Feb 2023

Web Developer

- Implemented responsive React dashboards and instructor feedback modules, cutting page load time 33% and increasing active session duration 18%, improving student experiences while reducing onboarding-related support tickets by 40% across multiple learning modules
- Developed reusable UI components with React Hooks for cards, modals, and alerts, standardizing design across three projects and accelerating feature delivery cycles 30%, which enabled faster product enhancements and consistent user experiences

WhiteHat Jr | India

Oct 2021 – Aug 2022

Software Engineer

- Created React-based lesson components including quizzes and dashboards, improving UI render time by 32% and boosting student session duration by 20%, while deploying WebRTC-powered video UIs that cut onboarding-related support tickets by 35%
- Enhanced curriculum delivery by executing reusable components for badges, progress bars, and animations using React and Firebase, reducing development time 28% and standardizing dashboards for students and parents across multiple product lines

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Java, React, Vue 3, Node.js, Express.js, .NET, Python

Frontend & UI: HTML5, CSS3, React Hooks, Responsive Design, D3.js, Accessibility Standards

Backend & APIs: RESTful APIs, Firebase, MongoDB, PostgreSQL, AWS Lambda, Redis, WebSocket Integration

Testing & QA: Jest, React Testing Library, Cypress, QA Planning, Debugging & Troubleshooting

DevOps & Tools: Git, GitHub Actions, Docker, Jenkins, Vite, Webpack, CI/CD Pipelines

Development Practices: Agile/Scrum, Test-Driven Development (TDD), SDLC Execution, Component-Driven Development, Code Reviews

PROJECTS

Music Recommendation System Machine | KNN-based | SVD | Deep Learning Models | Hybrid Systems

- Designed a hybrid recommendation engine combining collaborative filtering with deep learning models, achieving 92% top-K accuracy across profiles and genres using precision@K and MAP metrics, improving personalized recommendations and user engagement
- Automated model retraining pipelines that reduced manual updates by 50%, while authoring detailed documentation and tutorials to support peer adoption, reproducibility, and scalable experimentation across teams working on machine learning-driven recommendation systems

Pattern Recognition in X-Ray Imaging | PCA | K-Means Clustering | CNN | KNN | AUC-ROC | Evaluation metrics

- Developed a multi-label CNN classifier with 80% accuracy for chest X-ray diagnosis, applying PCA and K-Means to improve interpretability, enhance training efficiency, and uncover latent medical imaging patterns across pulmonary disease categories
- Built preprocessing pipelines in Python and Go using concurrency to parallelize image augmentation, reducing processing time by 40% while improving robustness by 35%, resulting in reliable diagnostic outcomes and improved performance on clinical datasets
