

Vamshi G

+1 (703) 609-2982 | vamshi6g@outlook.com | Dallas, TX, USA

PROFESSIONAL SUMMARY

Full Stack Engineer with hands-on experience designing and developing client/server applications and microservices using Java, Spring Boot, Kafka, AWS, Python, and JavaScript frameworks such as Angular and React. Skilled in integrating front-end and back-end components to support scalable, high-performance systems. Led microservices architecture efforts that improved application scalability and reliability. Experienced in all phases of the Software Development Life Cycle (SDLC), from requirements gathering to deployment and maintenance. Consistently deliver robust engineering solutions through technical expertise and close collaboration with cross-functional teams.

EDUCATION

George Mason University

Master's, Software Engineering

- Introduction to Artificial Intelligence(AI), User Interface Design and Development, Software Testing

PROFESSIONAL EXPERIENCE

Ivis International

Full Stack Engineer

Remote

August 2024 - Present

- Developed a Java microservice to auto-assign client complaints to nearby available technicians, optimizing directional task balance and cutting human involvement by 50%.
- Analyzed and resolved complex timing conflicts in e-surveillance operations by developing Java Rest APIs and a ticket scheduling algorithm, improving task allocation efficiency by 50%.
- Engineered an advanced multi-threaded Java/Spring Boot system to optimize Redis data retrieval, achieving an 89% increase in data access speed and significantly decreasing query latency during high concurrency periods.
- Conducted beta testing for a client complaint assignment system, gathering user feedback to improve functionality, increasing user satisfaction by 25%, and reducing errors by 40%.
- Integrated Swagger documentation into Spring Cloud Gateway, streamlining API management for over 20 microservices, which accelerated cross-team collaboration efforts and reduced API development time by 30%.
- Architected Kafka-based Change Data Capture (CDC), enabling real-time synchronization across 5+ heterogeneous databases, reducing data latency by 85% and improving operational reporting speed.
- Utilized Kafka Connect JDBC source/sink connectors to stream data from 7+ databases, enabling 20+ downstream apps and saving 30+ manual hours/month.
- Developed a Kafka Streams application in Java to join and enrich data from 5+ sources, enabling real-time transformation and reducing downstream processing time by 60%.
- Established end-to-end observability for a 3-node Apache Kafka cluster using Prometheus, Grafana, and JMX Exporters, enabling real-time monitoring of broker, topic, and consumer metrics.

Motivity Labs

Software Engineer

Irving, TX, USA

March 2018 - July 2022

- Created Microservices to generate financial statements for 100,000 retirement accounts using Jasper Reports and Spring Boot, improving report accuracy and delivery speed.
- Automated the delivery of financial reports and legal documents through Microservices, AWS Lambda, EventBridge, and SES, decreasing manual processing efforts by 90% and ensuring timely distribution for a client base exceeding 50,000 users.
- Revamped the Single Sign-On (SSO) utility with AWS Cognito and JWT tokens, facilitating seamless authentication across four web applications while decreasing login-related support tickets by 40%, leading to improved user satisfaction metrics.
- Constructed 8+ high-fidelity mockups using Figma and developed them into functional React components with Bootstrap; delivered web pages to stakeholders within a 2-day turnaround.
- Fortified API security by developing AWS Lambda functions, enabling JWT token validation and preventing 99% of unauthorized access attempts, thereby protecting sensitive customer data.
- Integrated Stripe API within microservices to automate billing for 10K+ customers, reducing manual transaction handling by 95%.
- Directed the automation of retirement account data refresh from Yodlee using a Spring Batch job, scheduling data syncs, improving data accuracy, and reducing manual update efforts by 90%.
- Optimized data access by introducing Hibernate Named Native Queries and tuning RDS query performance, reducing application load times by 40% in complex reporting scenarios.
- Assessed and safeguarded code functionality and reliability through comprehensive JUnit and Jest unit tests, achieving over 90% code coverage and significantly reducing the risk of defects in production.
- Automated CI/CD pipelines using Jenkins, Maven, and SonarQube for Java microservices deployed on AWS EKS, integrating AWS CloudWatch monitoring to accelerate release cycles by 60% and improve observability.

- Collaborated closely with team members to design and deliver secure, scalable software under Agile, reducing development bottlenecks and improving feature release frequency by 30%.
- Deployed microservices on AWS EKS using Kubernetes manifests and CI/CD pipelines, accelerating release cycles by 40% and ensuring consistent multi-stage deployments across environments.

SKILLS

Skills: Java, Python, JavaScript, Spring Boot, Spring Framework, Spring WebFlux, Spring Cloud, Reactive Programming, REST APIs, SOAP, Hibernate, JUnit, Node.js, Angular, React.js, Redux, Relational Database, NoSQL, Postgres, SQL, MySQL, MongoDB, Redis, Elastic Search, Maven, Gradle, Jenkins, Version Control, Git, Pub/Sub, Apache Kafka, Rabbit MQ, Prometheus, Grafana, Splunk, AWS, CI/CD, Ansible, Terraform, Docker, Kubernetes, JIRA, Confluence, Microservices, Design Patterns, Debugging, Object Oriented Design, Data Structures & Algorithms, Tableau, Data Visualization, Linux/Unix, OAuth, Go, GraphQL, TypeScript, PL/SQL, JSON, .NET, C#, Scala, DynamoDB, Test Driven Development (TDD), MS-SQL Server, Snowflake, Data Modeling, DevOps, Code Review, problem-solving, XML, K8s

CERTIFICATIONS

- Confluent Certified Developer for Apache Kafka

OPEN SOURCE CONTRIBUTIONS

Netflix Conductor OSS — *Contributor* [GitHub](#): [Pull Request Link](#)

- Contributed to **Netflix Conductor OSS**, fixing incorrect HTTP status codes by returning **404 Not Found** for non-existent tasks, improving API reliability.
- Collaborated with maintainers to resolve breaking change concerns, reverting **/poll** endpoints to **204 No Content** for backward compatibility.
