PROFESSIONAL SUMMARY

Python Full Stack Developer with around 4 years of experience building and maintaining web applications from front-end interfaces to backend services. Skilled in developing clean, reliable APIs, designing intuitive user experiences, and integrating systems for smooth data flow. Experienced in working closely with teams to understand requirements, troubleshoot issues, and deliver features that improve usability and performance. Comfortable moving between coding, testing, and deployment to ensure products run efficiently and meet user needs.

EDUCATION

Master of Science in Computer Science

December 2024

Auburn University at Montgomery, Alabama, USA

SKILLS

Programming & Scripting: Python, SQL, Bash/Shell, TypeScript

Frameworks & Libraries: Django, Flask, FastAPI, Django REST Framework (DRF), SQLAlchemy, Celery, Pandas, NumPy, Jinja2

Frontend Development: HTML5, CSS3, Tailwind CSS, JavaScript, React.js, Next.js, UI/UX Design, Responsive Web Design

Cloud & Serverless: AWS (EC2, Lambda, S3, RDS, DynamoDB, SNS, SQS, API Gateway, CloudWatch), Azure, Docker, Kubernetes

Databases: PostgreSQL, MySQL, MongoDB, Cassandra, Redis

Version Control & CI/CD: Git, GitHub, GitLab CI/CD, Jenkins, Helm

Testing & Monitoring: Unittest, Postman, PyTest, Locust, Locust (basic), Prometheus/Grafana (basic)

Development Tools & IDEs: Visual Studio Code, PyCharm, Jupyter Notebook, Virtualenv, Pipenv

Methodologies & Practices: Agile (Scrum, Kanban), SDLC, Test-Driven Development (TDD)

WORK EXPERIENCE

Netflix

June 2024 – Present

Python Full Stack Developer

USA

- Established and optimized microservices using FastAPI and Django REST Framework, improving API response times by 28% and enabling seamless integration with content recommendation and personalization systems.
- Designed and implemented scalable back-end workflows using Celery for distributed task processing, reducing job execution time for content metadata ingestion by 40% and ensuring real-time updates to the streaming catalog.
- Built interactive, high-performance front-end interfaces in Next.js with reusable components and responsive UI/UX design, improving cross-platform streaming feature adoption by 22%.
- Engineered data pipelines leveraging SQLAlchemy, Cassandra, and Redis to handle millions of daily content interactions, ensuring low-latency retrieval and real-time analytics for user engagement metrics.
- Deployed and monitored containerized applications using Kubernetes on AWS, integrating API Gateway for secure traffic routing and Prometheus for performance monitoring, which reduced downtime incidents by 30%.
- Collaborated in Agile (Scrum and Kanban) teams, translating feature requirements from product managers into working solutions, leading to faster rollout of experimental A/B testing features for content discovery.
- Automated testing with PyTest and CI/CD workflows, achieving 95% unit test coverage and reducing post-deployment defects by 35%.

Dixon Technology

July 2020 – December 2022

Python Full Stack Developer

India

- Crafted and maintained end-to-end web applications using Flask, FastAPI, and React.js, reducing feature delivery time by 25% and improving overall user engagement for internal product management tools.
- Integrated data processing modules with Pandas and NumPy to automate report generation for manufacturing KPIs, cutting manual analysis time by 60% and enabling real-time decision-making.
- Built responsive front-end interfaces using Tailwind CSS and TypeScript, improving load times by 1.5 seconds and achieving consistent UI performance across desktop and mobile devices.
- Created and deployed containerized microservices using Docker and Helm on Azure, ensuring 99.9% uptime for production workloads and reducing deployment rollback incidents by 20%.
- Adopted Test-Driven Development (TDD) practices by creating comprehensive unit test suites with Unittest and managing dependencies via Pipenv, achieving 90% test coverage, which lowered post-release bug rates by 30%, improved product stability, and minimized emergency fixes in production.
- Conducted performance testing of API endpoints using Locust, simulating peak load scenarios to identify processing bottlenecks, and implemented targeted optimizations in database queries, resulting in a 35% improvement in API throughput during high-demand periods.
- Led the migration of legacy services from Pyramid to FastAPI, modernizing the back-end architecture to leverage asynchronous processing and simplified routing, which reduced infrastructure costs by 20% and enhanced maintainability for future development cycles.
- Collaborated with cross-functional teams through GitHub and GitLab workflows, implementing standardized pull request templates, branch protection rules, and review processes to streamline code collaboration, reducing merge request turnaround time by 15%.

CERTIFICATION

AWS Certified Developer - Associate
