SUMMARY

Multifaceted **Data Engineer & Analyst** with 4.5+ years of hands-on experience building data pipelines, analytics frameworks, and BI systems across the manufacturing and FMCG industries. Adept at delivering full-lifecycle data solutions from raw ingestion to transformation, visualization, and stakeholder impact.

- **Data Engineering & Workflow Automation:** Developed enterprise-grade ETL pipelines using Apache Airflow, DBT, and Python, automating ingestion and transformation for 100M+ records/month. Migrated legacy batch jobs to near-real-time processing, reducing data latency by over 80%.
- **Business Intelligence & Analytics:** Delivered executive dashboards using Tableau and Power BI, translating raw operational data into actionable insights across supply chain, sales, and inventory. Enabled data-informed decisions, reducing reporting turnaround by 40–60%.
- **Data Modeling & Warehousing:** Designed star and snowflake schemas to support scalable reporting in PostgreSQL and Redshift. Built modular DBT models supporting self-service analytics and unified KPI frameworks across global units.
- **Programming & Automation:** Experienced in SQL, Python (Pandas, NumPy), and Excel VBA for data cleaning, validation, and process automation. Developed scripts for anomaly detection, reconciliation, and schema compliance.
- **Cross-functional Collaboration:** Worked across global teams (India & USA), aligning data strategy with business goals. Trained junior analysts, led stakeholder workshops, and built onboarding documentation for scalable adoption.

SKILLS

Programming Languages: Python, SQL, Shell Scripting

Data Engineering Tools: Apache Airflow, DBT, Apache Spark (basic), AWS Glue, Pandas, NumPy

Databases & Storage: PostgreSQL, MySQL, MS SQL Server, Snowflake, Redshift, S3, Parquet

Data Analytics & Visualization: Tableau, Power BI, Excel (Advanced with Pivot, Macros, VBA), Google Data

Cloud Technologies: AWS (S3, Redshift, Glue), Google BigQuery (basic), Azure Data Factory (introductory)

Version Control & DevOps: Git, GitHub Actions, JIRA, Confluence

ETL & Data Pipelines: Incremental Loads, CDC, Modular SQL Models, Workflow Orchestration

Reporting & BI Practices: KPI Design, Executive Dashboards, Self-service BI, Data Validation

Soft Skills: Stakeholder Communication, Agile/Scrum Methodology, Documentation & Onboarding, Team Mentoring

PROFESSIONAL EXPERIENCE

Data Engineer

Mar 2025 – Current

CEAT Ltd | USA

- Designed and maintained scalable data pipelines using Apache Airflow and DBT, enabling automated daily ingestion of inventory and sensor data from 5+ manufacturing plants across the U.S.
- Spearheaded migration from legacy batch processing to near-real-time data orchestration, reducing latency from 8 hours to under 20 minutes for production analytics.
- Partnered with cross-functional teams to define and standardize data contracts and transformation rules, improving downstream dashboard accuracy by 35%.
- Developed custom Python modules for data validation, schema checks, and anomaly detection, catching 97%+ of edge-case errors before hitting business reports.
- Optimized ETL logic for high-volume datasets (100M+ records/month), using partitioning strategies, window functions, and incremental load techniques to improve runtime by 42%.
- Deployed cost-effective storage solutions on AWS S3 + Redshift Spectrum, balancing query performance and budget constraints in the company's data lakehouse architecture.
- Collaborated with product and analytics stakeholders to architect a centralized analytics layer that now powers over 15 business-critical dashboards and reports.
- Played a lead role in data governance and documentation, including lineage mapping, glossary creation, and onboarding frameworks for new analysts and engineers.

Senior Data Analyst

May 2022 – Oct 2024

Nestlé India | Remote

- Built end-to-end data pipelines using DBT and SQL to integrate marketing, supply chain, and ERP data, reducing manual reporting by 60%.
- Developed Tableau dashboards for CPG leadership showcasing inventory turnover, order lead times, and forecast vs. actual performance, widely adopted in weekly reviews.
- Standardized data sources and transformation logic across global business units, resolving inconsistencies and reducing downstream report rework by 40%.
- Created modular data models (fact and dimension structure) to support self-service BI, enabling teams to slice data across 20+ product categories and regions.
- Wrote optimized PostgreSQL and BigQuery queries to process 5M+ rows of historical supply chain and sales data with >98% query success rate.
- Introduced Python-based automation scripts to clean incoming flat files and standardize column formats across SAP, CRM, and third-party vendor feeds.
- Integrated Airflow DAGs for batch jobs related to daily SKU performance tracking and promotional campaign lift analysis.
- Led remote onboarding and training sessions for junior analysts and stakeholders to scale adoption of new data pipelines and reporting workflows.

Junior Data Analyst

Jan 2020 – Apr 2022

Page Industries Ltd | India

- Developed and maintained Excel-based performance dashboards and Tableau visualizations for sales, stock levels, and procurement trends across 12 regions.
- Designed reusable SQL scripts for regional business heads to analyze SKU-wise sales performance, enabling 25% faster decision-making for replenishment cycles.
- Implemented forecast accuracy tracking logic that allowed planners to compare projected demand vs actuals, improving future planning by 18%.
- Collaborated with supply chain and merchandising teams to analyze sell-through rates, identifying underperforming SKUs and reducing excess inventory by ₹1.2 Cr.
- Built automated Excel macros and VBA-based reports for inventory heat maps and ageing analysis, reducing manual workload by 15+ hours/month.
- Partnered with the IT team during SAP module migration; wrote reconciliation scripts to validate closing balances across legacy and new systems.
- Participated in cross-functional workshops to align reporting metrics, building consistency across Sales, Logistics, and Product teams.

Data Analyst Intern

Jun 2019 – Dec 2019

Spire Digital | India

- Assisted senior analysts in building Excel dashboards and Tableau charts for project delivery and client reporting, gaining exposure to KPI frameworks and design standards.
- Performed data cleaning and transformation on raw datasets from CRM and internal systems using Python (pandas) and SQL.
- Conducted QA checks and reconciliation of pre/post-migration datasets during internal software transition, ensuring data consistency.
- Supported the creation of monthly performance summaries and visual decks for client account managers and project leads.
- Maintained and updated master datasets on product releases, feature usage, and customer support metrics with version control using Excel and Google Sheets.
