

Vamsi Prasad
vamsi.pvp9@gmail.com
+1-980-580-3252
Senior Data Analyst

Professional Summary:

- Senior Data Analyst with **8+** years of IT Industry experience in the analysis designing testing maintaining database ETL, Big Data, Cloud, BI tools (Tableau, Power BI) and Data warehouse applications.
- Experience in designing, developing, executing and maintaining data extraction, transformation, and loading for multiple corporate Operational Data Store, Data warehousing, and Data mart systems.
- Strong experience in Business and Data Analysis, Data Profiling, Data Migration, Data Integration, Data governance and Metadata Management, Master Data Management and Configuration Management.
- Strong Knowledge in Relational Database Concepts, Entity Relation Diagrams, Normalization and De Normalization Concepts.
- Expertise in Design and development of ETL logic through Spark Scala.
- Explicitly fashioned in writing SQL queries for various RDBMS such as SQL Server, MySQL, Microsoft SQL, PostgreSQL, Teradata and Oracle, NoSQL databases such as MongoDB, HBase and Cassandra.
- Good knowledge and strong experience in UNIX shell scripting, SQL, Hive, Python programming, PySpark, Databricks to manipulate data and draw insights from large datasets.
- Experienced using a variety of data mining methods, using a variety of data tools, building, and implementing models, creating algorithms and simulations.
- Good Knowledge & experience in working with CI/CD pipelines for automated application deployments using Jenkins.
- Complete knowledge on building, using Data Lakes in the cloud environment involves storing raw data, so not processed/cleaned, files not used daily but it's there if we need it.
- Adept at using large datasets to find opportunities for product and process optimization and using models to test the effectiveness of different courses of action.
- Built and maintained data pipelines to support the use of Amazon Athena as a data querying and analysis tool and Developed SQL queries in Amazon Athena to extract insights from large datasets.
- Experience with the use of AWS services includes RDS, Networking, Route 53, IAM, S3, EC2, EBS and VPC and administering AWS resources using Console and CLI.
- Analyzed data and provide insights to business users and connect to data sources, creating reports and visualizations, and identifying trends and patterns in data using **Tableau, Power BI**.
- Expertise in processual filtering, predictive analysis, and machine learning techniques for efficient AML solutions and identified block or sanction person through predictive analysis with real time risk name screening solutions.
- Excellency in MS Excel with proficiency in **Vlookups, Pivot Tables** and understanding of **VBA Macros**.
- Proficient in Project requirement analysis, design, development and testing, creation of requirement analysis report and final verification reports; implementing risk forecast & mitigation plans to meet the delivery dates.
- **Unit, regression, user acceptance, and performance testing** were performed in all environments.
- Performed **Development, SIT, UAT and PROD** and fixed bugs.
- Good Knowledge on creating a variety of project artifacts, including specification documents, **data mapping** and data analysis documents.
- Experienced reverse engineering existing **SQL** to determine business logic and create **source to target mapping** documents.
- Experienced with solid data management, Critical Thinking and Communication Skills.

Technical Skills

Databases	Teradata, Oracle 9i/10g, MySQL 5.5/5.6, Microsoft SQL 2008/12/14/16, PostgreSQL and MongoDB
Data Analysis Tools	Tableau, PowerBI, SAS, Microsoft Excel, Python – Pandas, Matplotlib, SAP BW and ETL tools.
Languages	Python, R and Scala
Big Data	Hadoop, HIVE SQL, Spark, Kafka
Software Engineering	OOPS, Programming patterns, Data Structures and Algorithms, DRY, Peer review patterns, Github CI/CD
Cloud Environments	Microsoft Azure, Amazon Web Services and Google Cloud (GCP)
Data Mining and Analysis	Data preparation, ingestion, collection and aggregation, Small/Large scale data-analysis, Feature selection and extraction, Model selection and evaluation, and probability concepts

Work Experience

AETNA – CVS Health

05/2021-Present

Senior Data Analyst, Project Description

Aetna Inc. is an American managed health care company that sells traditional, and consumer directed health care insurance and related services, such as medical, pharmaceutical, dental, behavioral health, long-term care, and disability plans, primarily through employer-paid (fully or partly) insurance and benefit programs, and through Medicare. The project focuses on generating a business report for the customer to validate their claims and insurance. Designed the ad-hoc reports for capitalize on new opportunities to the drive growth and it create the health care value in the fields. So, to achieving the objectives built the new universes for the EPDS2 version schema that capture all the parameters and customization to understand what it means to the new system. Also limiting the proliferation of universes and reports allows the business to be more efficient.

Responsibilities:

- Developed a pipeline using Hive (HQL) to retrieve the data from Hadoop cluster, SQL to retrieve data from Oracle database and used ETL for data transformation.
- Worked on loading the files from edge node to git and pulling the most recent code to edge nodes.
- Worked closely with the business and analytics team in gathering the system requirements.
- Written scripts for loading and transforming large sets of structured and semi structured data and also loading data into Hive partitioned tables.
- Build and maintain ETL pipeline (Pyspark), take ad-hoc requests for issue investigation (SQL/Python), and serve as SME for both Tech partners and data users.
- Optimized a lot of SQL statements and PL/SQL blocks by analyzing the execute plans of SQL statements and created and modified triggers, SQL queries, stored procedures for performance improvement.
- Used Teradata utilities such as Fast Export, MLOAD for handling various tasks data migration/ETL from OLTP Source Systems to OLAP Target Systems.
- Worked on hive creating different ETL pipelines for both One time and Incremental loads according to the business requirements.
- Developed spark programs using Scala API to compare the performance of spark with HIVE and SQL.
- Designed and created Hive external tables using shared meta-store instead of derby with partitioning, dynamic partitioning, and buckets.
- Creating and maintaining reports and dashboards using Data Studio to track key metrics related to pxl device usage and performance
- Worked on EDI reports which contains the insurance claims and monitor records involving these claims from the patients.
- Associated data and perform related duties including tracking trends, noting patterns, and analyzing to detect any irregularities.
- Analyzed the data CMS1500, which includes electronic form of professional and institutional claims of 837.
- Identified and monitor the transaction sets and claims from the 837 and diagnosis the data from internal customer to determine the accuracy of content.
- Writing queries in Google SQL to extract data from databases and analyze it.

- Intake, load and integrate large volumes of raw, complex health care data from various health plan and disparate sources.
- Experienced using Athena for querying and analyzing data stored in S3 and also used cases such as ad hoc analysis, data exploration, and reporting.
- Querying large datasets to extract meaningful insights and identify trends and Analyzing data to identify patterns and potential areas of improvement.
- Building and maintaining dashboards or reports to visualize data and communicate insights to stakeholders.
- Collaborating with cross-functional teams to drive data-informed decision making and improve product performance.
- Worked in data validation initiative for the data platform by setting up team routines to monitor weekly progress and taking the lead on task assignment and prioritization.
- Proficient in source-target data mapping, S/T record building/join conditions, transformation writing, and data lineage building
- Conducted Design workshops with clients to finalize wireframes, PowerBI Visualizations.
- Developed and managed Tableau, Power BI implementation plans for the stakeholders, ensuring timely completion and successful delivery according to stakeholder expectations.

Technical Environments: SQL, Python, ETL, Google pxl dashboard, Data studio, Teradata, Tableau, Power BI, Hadoop, Big Query, Sqoop, HDFS, AWS, Spark SQL, PostgreSQL, Google SQL.

Prudential, New York, NY
Senior Financial Data Analyst

08/2019-05/2021

Project Description:

Prudential Insurance is a financial services group that offers long-term savings and protection products. The group, through its subsidiaries, provides retirement benefits and insurance coverage for various risks such as illness, death and critical life events. It also provides investment solutions across various asset classes, including equities, multi asset, fixed income, infrastructure, and alternatives. The group offers its products and services to middle class and ageing population through independent agents, regional broker dealers, independent broker-dealer firms, wire-houses and banks. The project I work is related to analyze and predict whether a customer would raise a Non-Financial-Risk-Management complaints.

Responsibilities:

- Database Analysis Created advanced relational database Visual Basic and MS Access formulas such as Joins, Unions, and ODBC.
- Maintained, reviewed, imported, exported, cleaned, and created sales and financial relational databases Developed data requirements to support business finance needs with I/T to defined changes.
- Utilized several financial reporting tools to analyze data and present reports and recommendations including Brio, Essbase, MS Excel, Hyperion Essbase, and Impromptu Built financial relational database by identifying sources of information, assembling, verifying, and backing up finance and sales data.
- Data Mining Uncovered patterns in data samples through the use of representative and non-representative samples indicative of the domain and of the whole population by verifying and validating patterns of other samples of financial and sales data.
- Identified trends within financial data using sophisticated algorithms, to identify key attributes of processes and target opportunities.
- Extracted hidden patterns of financial data used in a wide range of profiling practices, such as marketing, surveillance, fraud detection and scientific discovery.
- Expertise in payments analyze and resolve complex business problems within the Central Payment's System. Provided technical support in identifying, evaluating and developing systems and procedures that are cost effective and meet user requirements.
- Expertise in payment systems including Swift, US clearing systems and focused on indirect sales channel and partner ecosystem.
- Analyzed output of OFAC/Sanctions and other applicable watchlist screening and make decisions on appropriate action to take and enhanced evaluation, identification, and research of relationships on both new and existing accounts.
- Accurate and efficient processing of Currency Transaction Reports and review of AML(Anti-Money Laundering) alerts with appropriate written decisioning.
- Developed data visualizations, dashboards, and reports and connecting to data sources, creating calculations and metrics, and building interactive dashboards that provide insights to business users using Tableau, Power BI.

- Performed Data Clustering to automatically discover the segments or groups within a customer data set.
- Database Design Developed and managed dashboard metrics for the company to improve management decision-making and performance.

Technical Environments: MS Excel, MS Access, Oracle 10g, UNIX, Windows XP, SQL, PL/SQL, Power Designer, Informatica, HDFS, PIG, HIVE, Snowflake, Map Reduce, Linux, HBase, Abacus, Flume, Sqoop, Netezza, MATLAB, SAS, Python, Databricks, Tableau, Alteryx, PowerBI, Hadoop, Agile.

Mastercard, St. Louis, MO

11/2018-07/2019

Senior Data Analyst

Project Description:

Mastercard's principal business is to process payments between the banks of merchants and the card-issuing banks or credit unions of the purchasers who use the Mastercard-brand debit, credit and prepaid cards to make purchases. The business problem I worked on deals with identifying the fraud transactions from the database logs and report it to the management in a visually appealing way in daily dashboards.

Responsibilities:

- Develop and implement SQL script to normalize and reformat client data elements into company standard in Google Cloud Platform (GCP).
- Writing queries in Google SQL to extract data from databases and analyze it
- Conduct preliminary and final QA reviews to ensure consistency and integrity of reporting outcomes.
- Produce Excel based business performance reports (for claims data, provider data, utilization data) and provide assessment of performance deviations and anomalies to project consultant.
- Design and develop "on the fly" solutions, utilizing SQL code to resolve data process issues.
- Expertise in developing data pipelines from SAP sources to extract, combine, clean, and deliver the finished dataset to SQL Server.
- Mentor and train lesser experienced analysts through instruction, peer review and sharing of "best practices", to improve team efficiency.
- Achievements: Successfully trained and triaged workload to (on and offsite) support members, whose contributions were noted for significantly impacting the team's ability to meet deliverable goals ahead of schedule.
- Recognized for quickly assessing an urgent and high-profile data issue and implementing corrective SQL scripts that successfully stabilized an estimated \$2 million variance found during final review of a client deliverable.
- Effectively stepped in as interim project coordinator during "highly sensitive" audit in absence of actuarial consultant.

Technical Environments: PL/SQL, Google SQL, MS SQL 2016, OLTP, GCP, ODS, Power BI, SAP, Transact-SQL, TOAD, Teradata r15, SQL Assistant.

Financial Data Analyst, Verizon

Bangalore, India [07/2016-09/2018]

Project Description:

Verizon offers voice, data and video services and solutions on its award-winning networks and platforms, delivering on customers' demand for mobility, reliable network connectivity, security and control. The project I worked deals with performing analysis and deriving insights from the sales and customer behaviors.

Responsibilities:

- Identified data discrepancies in key business reports that were leading to incorrect reporting of crucial customer data.
- Worked with engineers to fix data tables and queries to eliminate discrepancies.
- Introduced new and formal technical requirements and QA documents to define formal processes for quality assurance, business task initiation, and completion.
- Held full responsibility for the research, troubleshooting, and utilization of the Omniture web analytics tool and its tracking and reporting functions to ensure all business reporting data elements were accurate.
- Managed Business Objects user account administration and maintenance.
- Performed quality assurance testing, created test cases and test plans for data warehouse projects and QA testing.
- Demonstrated understanding of data requirements and the StubHub organization to document requirements for data warehouse projects including a key marketing project to gauge marketing channel performance.
- Fostered the utilization of SQL and Excel in managing all data transformation, mappings, and migrations for multiple clients.
- Secured additional information from numerous linked servers connected to SQL and Oracles tables using queries.

- Prepared and presented SQL Server Reporting Services (SSRS)/Hyperion reports, which detailed risk characteristics and location.
- Coordinated with the Information Technology department with regard to documented business designs and unit test plans in compliance with Sarbanes-Oxley (SOX).
- Administered the National Council on Compensation Insurance (NCCI) regulatory and compliance reporting.
- Made substantial contribution in preparing and presenting reports and analysis, predictive modeling and other data mining results using SSIS, Excel and Access applications.
- Reliably aided the Underwriting, Actuarial, and Finance and Claims departments with innovative business intelligence and statistical analysis.
- Defined a large list of related variables using mining techniques including principal components and classification of large datasets to develop business judgment using SQL Server Integration Services (SSIS) and Excel charts/pivot tables.

Technical Environments: SQL, MS Visio 2010, MS Excel 2010, SQL Server 2010, Tableau, Python.

Associate Data Analyst, JP Morgan Chase

Hyderabad, India | [04/2015-06/2016]

Project Description:

JPMorgan Chase & Co. is a financial holding company. It provides financial and investment banking services. The firm offers a range of investment banking products and services in all capital markets, including advising on corporate strategy and structure, and capital raising.

Responsibilities:

- Responsibility for secondary and primary research, data analysis, contact discovery and company profiling.
- Identify, collect, and organize business data as per requirement from various online sources.
- Contact discovery of companies based in USA, EMEA, APAC, DACH, EU, LATAM etc. Research using online search tools to retrieve contact information of prospects. Extract data from leading online directories like LinkedIn, Zoom Info, Hoovers etc. Market Research/ Contact Discovery through Professional networking and other Professional websites.
- Email discovery, contact details, list building as per the campaign Requirement.
- Review data daily to ensure its quality and integrity.
- Focused on achieving daily/monthly targets defined for self and team.
- Creation of different Data files according to the projects.
- Worked with project team representatives to ensure that logical and physical ER/Studio data models were developed in line with corporate standards and guidelines.

Technical Environments: Python 3.x, Tableau Desktop, SQL, SharePoint, Microsoft Excel, SSRS, SSIS, ETL, Snowflake and Query Analyzer

Data Analyst, Neustar

Hyderabad, India | [05/2014-03/2015]

Project Description:

Neustar, Inc. provides real-time information and analytics for risk, digital performance, defense, telecommunications, entertainment, and marketing industries, and also provides clearinghouse and directory services to the global communications and Internet industries.

Responsibilities:

- Established the creation of metrics, reporting and repeatable processes that provided the basis for robust long-term performance monitoring, cost modeling and trend management of Neustar's Operational Infrastructure and Service Quality.
- Identified and validated data sources and educated employees throughout the company on how to leverage the information to assist making decisions and understand service health and capacity.
- Led the design and development of analytical projects to understand key business behaviors that drive customer satisfaction, goodwill, and engagement.
- Managed the collection, analysis and communication of insights to enable the business to make informed decisions, forecast implications of initiatives undertaken and monitor changes introduced to enhance client experience.
- Performed Operational Cost analysis to improve operational efficiency and in turn driving revenue growth.
- Provided monthly reporting to senior leadership on key performance indicators (KPI) and SLA statistics.
- Provided actionable audience specific recommendations.
- Worked cross functionally as part of larger project teams to deliver against corporate scorecard initiatives.

Technical Environments: Oracle 10g, Microsoft Excel, MicroStrategy, MS Visio, MS Project, Informatica, Netezza, MATLAB, SAS.
