

Vamsi Krishna Sai Thota

Data Analyst

Ohio, USA | (937)-476-9341 | vamsithota2305@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Data Analyst with 4+ years of experience delivering business impact through dashboarding, automation, and predictive modeling. Built interactive reports in Power BI, Tableau, and Looker, automated ETL pipelines using Snowflake and Azure Data Factory. Applied Python, SQL, R, and SAS for churn analysis, A/B testing, and segmentation. Strong in Agile environments with hands-on Jira and Confluence usage. Comfortable working with cross-functional teams, securing data access, and driving clarity across complex datasets in healthcare and marketing domains.

TECHNICAL SKILLS

- **Languages & Analytics:** SQL, Python, R, DAX, VBA, SAS
- **Data Visualization & BI:** Power BI, Tableau (Tableau Desktop Specialist), Looker, Power BI Service, Tableau Server
- **Databases:** Microsoft SQL Server, Snowflake, MySQL, PostgreSQL, SAP HANA, SSMS
- **Data Management & ETL:** Azure Data Factory, Data Modeling, Data Profiling, Report Automation, Semantic Modeling, Data Transformation, Structured & Semi-Structured Data Handling
- **Statistical & Analytical Methods:** A/B Testing, Predictive Analysis, Churn Analysis, CLV Modeling, Time-Series Analysis, Segmentation Analysis, Descriptive & Diagnostic Analysis
- **Excel Expertise:** Pivot Tables, Conditional Formatting, Nested Formulas, Calculated Fields, Macros
- **Tools & Documentation:** JIRA, Confluence, Git, PowerApps
- **Reporting & Storytelling:** KPI Dashboards, Executive Reporting, Ad-hoc Analysis, Data Storytelling, Interactive, Visualizations
- **Methodologies:** Agile, Scrum, SDLC
- **Governance & Compliance:** Data Governance, RLS/OLS in Power BI, Git-integrated Reporting Pipelines

PROFESSIONAL EXPERIENCE

Data Analyst / CVS Health, USA

Aug 2024 – Current

- Built cross-functional dashboards using Power BI and Tableau with DAX, driving a 22% improvement in operational reviews across five departments through dynamic filtering and executive-ready layouts.
- Automated monthly data pipelines in Azure Data Factory and Snowflake, cutting manual processing by 80% while increasing report refresh rates from weekly to daily without IT dependency.
- Implemented row-level security in Power BI Service, controlling data visibility for 95+ users and supporting HIPAA compliance across analytics assets using Git-managed publishing pipelines.
- Delivered churn analysis and CLV modeling in Python and SAS, identifying high-risk patient segments and increasing retention efforts that led to a 13% drop in Q2 customer attrition.
- Coordinated Agile ceremonies using Jira and Confluence, documenting ETL processes, business logic, and visualization standards in SDLC-aligned templates reviewed by stakeholders biweekly.

Data Analyst / DBS Bank – Hyderabad, India

Jun 2022 – Jul 2023

- Migrated 1.3M+ SAP customer and transaction records to Azure Blob Storage and Snowflake using Azure Data Factory pipelines, reducing fraud detection latency by 40% through scalable ETL design.
- Designed dynamic, auto-refreshing Power BI dashboards with custom DAX measures, slicers, and semantic layers, enabling real-time insights on churn, fraud risk, and retention KPIs across 5 product teams.
- Built fraud-risk data models and semantic layers in Snowflake and Power BI to identify high-risk patterns, reduce false positives, and improve fraud classification accuracy for credit card transactions.
- Partnered with Risk and Marketing teams to analyze customer acquisition, segmentation, loyalty behavior, and churn patterns using SQL, Python (EDA), and time-series analysis.
- Conducted A/B testing and trend modeling for fraud control interventions, helping optimize fraud flag thresholds and improving customer satisfaction by 18% in high-risk cohorts.
- Applied advanced SQL scripting and data validation logic in SSMS to build reusable queries, joins, and views for fraud signal derivation and customer profiling across structured and semi-structured datasets.
- Automated dashboard deployments using Git-integrated Power BI pipelines, ensuring role-based access (RLS/OLS), auditability, and compliance with internal governance standards.

- Delivered actionable insights through data storytelling and ad hoc reporting, enabling leadership to respond quickly to emerging fraud threats and adapt customer outreach strategies.
- Improved dashboard UX and report standardization, reducing stakeholder feedback cycles by 30% through consistent visual themes, drilldowns, and executive summaries.

Data Analyst / WEBSITES FACTORY – India

Jan 2021 – Apr 2022

- Delivered end-to-end BI and ETL solutions for global clients across supply chain, logistics, and digital marketing sectors, working cross-functionally to tailor insights and reporting for diverse business needs.
- Built automated ETL pipelines in Azure Data Factory to ingest data from Excel, MySQL, XML, CSV, and REST APIs into Azure Blob Storage and Snowflake, reducing manual handling and enabling scheduled semantic model refreshes.
- Designed interactive Power BI dashboards for executive KPIs, including freight gap analysis, customer acquisition cost, and marketing performance, increasing data-driven decisions across operations, marketing, and finance.
- Conducted freight data analysis by merging shipping and delivery datasets with DAX-based KPIs to flag delayed or missing freight, identify impacted distribution centers, and support supply chain optimization.
- Created Bill Back Analysis dashboard (~50K records) to track vendor discrepancies by comparing special pricing vs. actual PO pricing, aiding cost recovery insights and financial compliance.
- Built email exchange analytics dashboard (~100K records) with time-based filters and department-wise breakdowns to monitor usage trends and guide IT audits and license management decisions.
- Performed data profiling, transformation, and modeling in Power BI and SSMS to clean and normalize raw data into analysis-ready structures, ensuring accuracy and consistency across reports.
- Led A/B testing for marketing content and product variations using SQL and Power BI, enabling performance comparisons and improved targeting strategies with measurable uplift in engagement.
- Collaborated in an Agile/Scrum environment, participating in sprint planning, stand-ups, and report QA reviews; used Confluence for documentation and Git for version control of dashboard and ETL scripts.

PROJECTS

HR Analytics Dashboard – Tableau | Spring 2025

- Combined multiple HR datasets and built 5+ interactive dashboards with filters for demographics, attrition trends, and performance scores, helping reduce analysis time by 40%.
- Integrated real-time data refreshes from HR systems and embedded turnover rate, tenure, and satisfaction KPIs, directly influencing a 15% improvement in retention initiatives.

LEGO-Themed Dashboard – Power BI | Spring 2025

- Designed a data model handling 4,000+ LEGO products; implemented DAX measures and slicers to filter by price, age group, and themes, boosting data accessibility for end users.
- Added image tooltips, bookmarks, and decomposition trees for seamless navigation, increasing user interaction by 30% in usability tests.

Disease Prediction App – Python (Flask), ML | Spring 2022

- Built a web app with 4 ML models Naïve Bayes, SVM, Random Forest, and Decision Tree reaching 87% average accuracy across 30+ disease classifications using symptom-based input.
- Developed an intuitive UI for real-time health predictions and achieved 92% user satisfaction in pilot testing with healthcare students and early-career practitioners.

EDUCATION

- **Master of Science in Computer Science** Dec 2024
Wright State University (WSU), Fairborn, Ohio, USA
- **Bachelor of Technology in Information Technology** May 2022
Malla Reddy College of Engineering & Technology (MRCET), Hyderabad, India

CERTIFICATES

- Tableau Desktop Specialist
- Business Analysis Basics
- Power BI: Dashboards for Beginners
- SAS Programming Essentials 9.4 – SAS Institute
- IBM & Coursera Certifications – Python, SQL, Excel, R, Power BI, Snowflake, Database Management, Azure, Data, Factory, Databricks
