

PROFESSIONAL SUMMARY:

Skilled Data Analyst with nearly 5 years of experience specializing in SQL, Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), SAS, and R. Proficient in Excel (including financial models and macros), Power Query, and DAX. Skilled in PostgreSQL, MongoDB, MSSQL, and NoSQL databases. Experienced with Power BI, Tableau, and SSRS for data visualization and reporting. Proficient in Time Series Analysis, Machine Learning algorithms.

TECHNICAL SKILLS:

Data Analysis: SQL, SAS, Python (Pandas, NumPy, Matplotlib, Seaborn, Sklearn, Jupyter), R

Databases: MSSQL, Snowflake, PostgreSQL, MongoDB, NoSQL

Data Visualization: Tableau, Power BI, SSRS, Ad-hoc Reporting

Data Engineering: dbt, Airflow, ETL Development, Data Modeling, Data Quality & Lineage, Data Governance, Data Validation

Collaboration: Agile/Scrum, JIRA, MS Office, Fraud Strategy, Time Series Analysis, DataBricks, Financial Modelling.

EXPERIENCE:**Huntington****October 2024 – Present****Fraud Risk Strategy Analyst**

- Designed and executed full life cycle fraud strategies, cutting fraud losses significantly and accelerating detection timelines.
- Fine-tuned existing and developed new fraud prevention strategies in SAS and internal tools for high-risk transactions, Synthetic IDs, and Account takeover (ATO) prevention, saving Millions in fraud losses.
- Conducted in-depth analysis of fraud patterns in Python to identify vulnerabilities and develop targeted fraud prevention measures.
- Identify critical gaps in product policies and processes that increase fraud risk, enabling proactive mitigation of financial threats.
- Define and monitor key fraud performance metrics like fraud loss rate, false positive rate, and detection lag time, leading to significant improvement across various existing fraud detection strategies.
- Harness SQL to analyze large data to identify gaps in current fraud policies, helping to proactively manage emerging fraud threats.
- Collaborate with all product teams to adjust policies, enhancing fraud prevention measures while supporting product development goals.
- Work closely with machine learning teams and third-party vendors to enhance fraud solutions and drive innovation.
- Developed reports of fraud data and trends for executive leaders to track fraud losses for different channels.

Molina Healthcare**Data Analyst****August 2022 – July 2023**

- Designed and optimized MS SQL relational schemas to store member eligibility, provider, and claims data. Applied database modeling, normalization, and indexing strategies to improve query performance by 35% for downstream applications.
- Developed techniques to identify and resolve data quality issues in healthcare claims ingestion. Applied ETL preprocessing using SQL, Python to detect duplicates, missing ICD-10 codes, and incorrect patient demographics.
- Managed multiple data validation tasks and ETL checks using Airflow and SQL, improving Data quality and consistency across datasets.
- Built financial analytics dashboards in Power BI to track Molina's Accounts Payable KPIs (vendor payments, claim payouts, processing delays). Collected and cleaned multi-source financial data with SQL, Excel.
- Implemented data integrity and governance controls across patient and provider records by developing SQL scripts, stored procedures, triggers.
- Created validation rules to ensure compliance with HIPAA regulations, preventing duplicate provider IDs and incomplete claim submissions.
- Authored standard operating procedures, user guides, and training materials for data analysts and finance teams. Conducted workshops on SQL querying, BI dashboard usage, and error resolution techniques to ensuring staff could independently analyze and resolve operational issues.

HSBC**January 2020 – July 2022****Data Analyst**

- Designed and automated ETL workflows using Python, PySpark, and SQL to wrangle large-scale financial datasets including transactions, credit card usage, and ACH transfers, reducing manual reconciliation effort by 40%.
- Executed data cleaning and standardization across millions of retail banking records in Oracle, Teradata, and Hadoop, resolving duplicates and missing fields and improving KYC compliance and data reliability.
- Applied data mining techniques such as outlier detection, clustering, and rule-based analysis on transaction-level data to flag anomalies, enabling early fraud detection and reducing false positives by 20%.
- Developed reusable PySpark data pipelines to transform unstructured ATM and mobile banking log data into structured formats, powering customer behavior analytics and operational risk dashboards.
- Partnered with Credit Risk teams to mine and wrangle bureau data and loan repayment histories, producing feature-rich datasets used in risk scoring models like logistic regression and XGBoost for default prediction.
- Delivered ad-hoc customer churn analysis by cleaning and mining behavioral data such as login frequency, declined transactions, and service calls, and building dashboards that supported customer retention strategies.

ACADEMIC PROJECTS:**Money Laundering Analysis- \$6B Transaction probe** (Python, Excel, SQL, Tableau, Time Series Analysis)

- Developed a Time Series Analysis model in Python to uncover potential money laundering by UK firms via Danske Bank in a \$6B dataset from OCCRP, highlighting anomalies to enhance financial transparency & integrity

Credit Card CLTV & Profitability Modeling (Python, scikit-learn, Pandas, Machine Learning)

- Built ML models to estimate Customer Lifetime Value and segment profitability using behavioral and transactional data. Identified key revenue drivers, enabling marketing optimization and data-driven risk strategies across customer segments.

EDUCATION:

- University of Cincinnati**, Master of Science in Data Science, USA, GPA 3.7
- KL University**, Bachelor's in Computer Science, India, GPA 3.6

CERTIFICATIONS:

- AWS Certified Cloud Practitioner
- Google Data Analytics
