

Varsha Bolneni

314-760-2988 | Dallas, Tx | bolnenivarsha@gmail.com | <https://www.linkedin.com/in/varshab1214998/>

Summary

Experienced **Software Engineer** with **4 years** of expertise in building and optimizing large-scale enterprise applications across **banking** and **telecommunications** domains. Adept in **Java**, **Spring Boot**, **RESTful API** development, and **microservices-based architectures**. Possesses hands-on experience with **AWS**, **Azure**, and **Kubernetes** for cloud-native and containerized deployments, along with monitoring solutions like **Datadog**. Demonstrates a strong ability to design scalable systems, enhance performance, and ensure high reliability through clean code, thorough testing, observability, and **CI/CD automation**.

Education

Master of Science, Computer Science

Jan 2022 - July 2023

University of North Texas, Denton, TX, USA.

Bachelor of Technology, Computer Science

Aug 2016 - June 2020

SR University, Warangal, India.

Technical Skills

Programming: Java, Python, C, C++, SQL, JavaScript, PySpark

Frameworks: Spring Boot, Spring, Hibernate, React, Django, JUnit, Mockito, Node.js

Cloud: AWS (EKS, S3, EC2, Lambda), Azure (Synapse, Data Lake, Fabric)

APIs & Integration: REST APIs, OpenAPI/Swagger, WebClient, Microservices

DevOps: Jenkins, GitHub, Maven, Gradle, Docker, Kubernetes, Datadog

Data & Messaging: Kafka, Spark, Hadoop

Databases: Oracle, MySQL, PostgreSQL, MongoDB, CosmosDB, CockroachDB

Visualization & Analytics: Power BI, Tableau, Matplotlib

Work Experience

Java Developer

Employer: Goldman Sachs, Dallas, USA

May 2024 - Present

- Designed and developed a secure microservice using Java, Spring Boot, and REST APIs to centralize client RSU operations, replacing direct DB access and ensuring controlled, auditable updates.
- Integrated Apache Kafka for asynchronous data ingestion, enabling reliable event-driven communication between stock management systems and improving transaction throughput.
- Implemented **AES encryption** and masking logic at both API and database layers, ensuring no client data exposure in UAT or higher environments while meeting internal compliance standards.
- Refactored legacy JDBC operations into optimized **Spring Data JPA transactions**, improving consistency and reducing deadlocks during concurrent stock updates.
- Built automated **CI/CD pipelines in Jenkins** with Git-based versioning and environment-specific configurations, reducing deployment time and improving delivery reliability.
- Introduced **Liquibase-based schema migrations**, preventing schema drift across environments and minimizing release-time failures.
- Developed **JUnit and Mockito** test suites with in-memory **H2 database** for integration validation, increasing coverage and catching early data consistency defects.
- Enhanced application observability by integrating **structured logging (SLF4J/Logback)** and Kafka consumer lag metrics, improving traceability and production issue diagnostics.
- Standardized inter-service contracts using **OpenAPI/Swagger** specifications and validation filters, reducing payload inconsistencies and integration defects across teams.

Software Developer

Employer: Triotek IT

Client: JP Morgan Chase, Tampa, USA

Oct 2023 - April 2024

- Built and optimized **Spring Boot microservices** to handle internal payment workflows, improving transaction efficiency and ensuring adherence to secure coding and compliance standards.
- Integrated **RESTful APIs** with downstream systems and implemented **request validation and exception handling**, improving fault tolerance and client experience across services.
- Designed and maintained **data persistence layers** using **PostgreSQL and Hibernate**, applying indexing and query tuning to reduce response latency under high transaction volumes.
- Developed **CI/CD pipelines** using **Jenkins and GitHub Actions**, automating unit tests, build packaging, and deployments across UAT and production environments.
- Applied **Docker and Kubernetes** for containerized service deployment, improving scalability and enabling smoother multi-region releases with minimal downtime.
- Collaborated with cross-functional teams to **analyze system incidents**, automate root-cause detection scripts, and contribute to observability dashboards using **Datadog and Grafana** for real-time monitoring and metrics visualization.

Full Stack Developer

Tata Consultancy Services - Hyderabad, India

Client: Comcast - USA

Jan 2021 - Nov 2021

- Developed and enhanced **customer self-service web applications** using **Angular, HTML5, CSS3, and JavaScript**, improving page responsiveness and user engagement.
- Built and consumed **RESTful APIs** with **Spring MVC and Java**, enabling seamless data exchange between frontend modules and backend systems.
- Integrated **JWT-based authentication** and role-based access control to strengthen application security and protect customer data.
- Collaborated with UI/UX teams to translate wireframes into dynamic components, ensuring adherence to **Comcast's design standards and accessibility guidelines (WCAG)**.
- Optimized **SQL queries and stored procedures** to reduce data retrieval time for high-traffic dashboards and analytics pages.
- Participated in **agile sprint ceremonies**—planning, code reviews, and retrospectives—to deliver new features and bug fixes in iterative releases.
- Deployed builds through **Maven and Tomcat servers**, coordinating with QA and DevOps teams to validate production readiness.
- Implemented **JUnit test cases** for backend modules and **Karma/Jasmine** tests for Angular components, increasing overall test coverage and code reliability.

Java Developer

FireZeal Internet Solutions, Hyderabad, India

Oct 2019 - Dec 2020

- Implemented and optimized RESTful APIs for efficient communication between different components.
- Developed server-side logic using NodeJS, Express, and NestJS frameworks, optimizing application performance and scalability.
- Contributed to collaborative code reviews using tools like GitHub for version control.
- Led agile ceremonies, conducted engaging demos and presentations, and assisted new engineers in understanding established norms, fostering a collaborative learning environment.
- Employed TypeScript to significantly bolster code maintainability, proactively identify errors during compile-time.
- Integrated AWS cloud services into applications, optimizing scalability, performance, and security through services like Amazon EC2, S3, and RDS.
