

PROFESSIONAL SUMMARY

- 5 years of hands-on experience as a **Python Developer** in designing and deploying scalable software solutions across e-commerce, **ERP**, and data platforms.
- Strong expertise in Python development using **Django**, **Flask**, and **FastAPI** for web apps and microservices.
- Excellent knowledge of **OOPS**, **Multi-Threading** and **Collections** concepts and its usage in Python.
- Proficient in building and consuming **RESTful APIs**; familiar with **GraphQL** and async messaging using **Kafka** and **RabbitMQ**.
- Developed **web applications** and **RESTful** web services and APIs using Python and Django.
- Experience in Development and testing **ETL** data processes.
- Skilled in designing and optimizing relational (**MySQL**, **PostgreSQL**) and non-relational (**MongoDB**, **Redis**) databases for performance and scalability.
- Experience in developing Single page Application using **React Redux** and **Flux** architectures.
- Applied **machine learning** techniques using **Scikit-learn**, **TensorFlow**, and **Pandas** to solve business problems and automate workflows.
- Experience working knowledge in **UNIX** and **Linux** shell environments using command line utilities.
- Experience in working on various python packages such as **NumPy**, SQL Alchemy, pyodbc, **matplotlib**, Beautiful soup, pickle, PySide, **SciPy**, PyTables.
- Developed interactive visualizations and **dashboards** using **Tableau**, **Seaborn**, and Matplotlib for insights and reporting.
- Skilled in cloud technologies, including **AWS (S3, EC2, Lambda)** and infrastructure automation with **Docker** and **Kubernetes**.
- Skilled in Infrastructure as Code (**IaC**) using Terraform to provision cloud resources, manage configurations, and support CI/CD pipelines.
- Excellent understanding of Agile methodologies, version control (**Git**), unit testing (**Pytest**), and software best practices.
- Built and maintained **CI/CD** pipelines using GitHub Actions, Jenkins, and Docker, enabling faster and safer deployments.
- Used JIRA/ServiceNow for tracking incidents and managing change requests as part of Agile/ITSM processes.
- Demonstrated leadership and collaboration across cross-functional teams to deliver high-impact projects on time.
- Passionate about continuous learning, innovation, and building resilient, efficient systems.

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL

Web Technologies: HTML, CSS, JavaScript, React.js, TypeScript

Database: MySQL, PostgreSQL, MongoDB, Redis

Frameworks /Libraries: Django, Flask, FastAPI, Pandas, NumPy, Scikit-learn

Cloud & DevOps: AWS (S3, EC2, Lambda), GCP (Cloud Run, Stackdriver, IAM), Docker, Kubernetes, Jenkins, RabbitMQ, Grafana

Tools: GitHub, Postman, Jupyter Notebook, Tableau, Pytest, GraphQL

Others: REST APIs, ETL Pipelines, CI/CD, Agile Methodology, ServiceNow, Problem Solving

PROFESSIONAL EXPERIENCE

Alphabroder, Philadelphia, PA

Dec-2023 – Present

Python Developer

- Integrated FDM4 ERP with the e-commerce platform using Python and REST APIs, enabling real-time synchronization of inventory, orders, and customer data.
- Developed internal REST APIs and evaluated GraphQL adoption to optimize data-fetching for frontend modules.
- Built modular React.js components with Redux and Hooks, reducing re-render times by 20%.
- Implemented Redis caching for faster data retrieval and efficient management of user sessions.
- Configured Grafana dashboards with Prometheus to monitor ERP sync services and improve system uptime.
- Automated daily and weekly reports using Pandas, Matplotlib, and Seaborn to analyze inventory trends, sales performance, and stock aging.
- Designed and implemented a MongoDB database solution to manage product catalogs, customer data, and order histories, improving query performance by 25%.
- Implemented AWS Code Pipeline and Created Cloud formation JSON templates in Terraform for infrastructure as code (IaC).
- Built Kafka producers and consumers for handling asynchronous messaging workflows across microservices, improving system scalability and reliability.
- Automated CI/CD pipelines using Docker for containerization and GitHub Actions for deployment processes.

Freepoint Commodities, Stamford, CT

Sep-2023 – Dec-2023

Programmer Analyst

- Built and optimized RESTful APIs using FastAPI to facilitate real-time data exchange between applications.

- Implemented and deployed an ML pipeline using Python, Scikit-learn, and TensorFlow to analyze large datasets, improving data processing efficiency by 25%.
- Integrated RabbitMQ for asynchronous job processing to decouple services and improve reliability.
- Deployed containerized microservices to Google Cloud Platform (GCP) using Cloud Run and managed IAM roles for secure access control.
- Configured monitoring and logging using GCP Stackdriver to track ML inference API performance and system health.
- Developed secure API authentication using OAuth2 and JWT, strengthening security and compliance.
- Built interactive dashboards in Tableau and integrated them into the client portal for sales and inventory insights.

Capgemini Technology Solutions India LTD

Feb-2020 – Dec-2021

Software Engineer

- Developed Python-based web applications using Django, following MVC architecture for scalable solutions.
- Optimized ETL pipelines using Pandas and PySpark, reducing data processing time by 30%.
- Designed and managed PostgreSQL and MySQL databases, writing complex SQL queries and stored procedures to improve data processing efficiency.
- Containerized applications with Docker and managed microservices deployments using Kubernetes.
- Managed AWS infrastructure, utilizing EC2 for hosting, S3 for storage, and IAM for secure access management.
- Created and managed Terraform and CloudFormation templates infrastructure as code (IaC).
- Implemented CI/CD pipelines using GitHub Actions and Jenkins for applications, including automation testing, building and deployment processes.
- Conducted performance tuning and debugging, achieving a 25% improvement in system response times.

Athena Global Technologies LTD, India

Jan-2019 – Jan-2020

Software Engineer

- Participated in requirement gathering, design, and development based on high-level business need.
- Utilized Flask to build RESTful APIs for internal tools, enabling seamless data exchange between systems.
- Designed and implemented a MySQL database to manage data tables, including the development of stored procedures, functions, and triggers, resulting in a 15% reduction in query execution time.
- Wrote and maintained 100+ unit tests using Pytest, increasing test coverage from 60% to 85%.
- Gained hands-on experience with version control Git, managing code repositories and resolving merge conflicts.
- Participated in daily stand-ups and contributed to code review discussions.

EDUCATION

University of North Carolina at Charlotte, Charlotte, North Carolina

01/2022 - 05/2023

Master of Science in Computer Science - 3.6 GPA

Gokaraju Rangaraju Institute of Engineering & Technology

08/2025 – 05/2019

Bachelor of Technology – Computer Science
