Summary

Full Stack Software Engineer proficient in building scalable, cloud-native applications using Python (Django, FastAPI), JavaScript (React), and AWS. Skilled in designing RESTful APIs, optimizing databases, and deploying containerized microservices to improve performance and user experience.

Education

California State University, Long Beach

Master of Science in Computer Science || Long Beach, CA

Jan 2022 – Dec 2023

GPA: 3.5/4.0

Gujarat Technological University

Bachelor of Engineering in Computer Engineering || Gujarat, India

July 2017 – June 2021

GPA: 3.6/4.0

Experience

LABON LLC

March 2024 - Present

Software Engineer, (FastAPI, React.js, PostgreSQL, AWS, Docker, Kubernetes)

Los Angeles, CA, USA

- Built a real-time inventory and analytics platform with FastAPI and React.js, reducing frontend rendering and backend API lag by 45% through API response caching and optimized React component rendering.
- Architected backend using PostgreSQL for large-scale data ingestion; implemented indexing and query tuning to reduce average query time by 60%.
- Deployed containerized microservices using Docker and Amazon EKS (Elastic Kubernetes Service), achieving 70% faster and error-free release cycles.
- Automated pricing analytics using Pandas and NumPy, integrating time-series forecasting and ML-driven anomaly detection, boosting forecasting accuracy by 30%.
- Instrumented microservices with AWS CloudWatch and AWS X-Ray to monitor distributed tracing, identify bottlenecks, and cut average API latency by 35%.

BuidUp Infotech

May 2019 – December 2021

Software Engineer, (Django, PostgreSQL, Node.js, Express.js, React, JavaScript, Jenkins, AWS)

Surat, Gujarat, India

- Developed a modular and scalable accounting system using Django and PostgreSQL, applying SOLID principles and reusable components to reduce reporting workload by 40%.
- Engineered high-throughput REST APIs with Node.js/Express.js using load balancing, Redis caching, and asynchronous workers (Celery + RabbitMQ) to handle 10,000+ concurrent users efficiently.
- Set up CI/CD pipelines via Jenkins and GitHub Actions, incorporating automated testing and rollback strategies, saving 15+ hours/week in manual deployments.
- Optimized database performance by implementing indexing strategies and query refactoring, leading to 55% improvement in report generation time.

Projects

GenAI Earnings Call Analyzer | React, Django, FastAPI, LangChain, OpenAI API, PostgreSQL

- Built a full stack web application to analyze company earnings call transcripts using LLMs via OpenAI API.
- Used LangChain with vector-based search (FAISS) to provide contextual QA and sentiment summaries for investors.
- Developed a predictive model with 87% accuracy, incorporating factors such as location, weather, and holidays, which helped stores enhance inventory efficiency and improve profitability.

Retail Check-out system | C#, .NET, IOT

- Built an automated self-checkout solution using Raspberry Pi, cameras, and a centralized .NET backend to reduce wait times.
- Designed APIs for real-time inventory tracking and admin management, streamlining store operations.

Technical Skills

Programming Languages: C#, JavaScript, TypeScript, Python, Java

Framework: ASP.NET Core, .NET MVC, Node.js, Express.js

Frontend: React.js, HTML5, CSS3, Bootstrap

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL

Cloud DevOps: AWS (EC2, Lambda, RDS, S3, API Gateway), Docker, Kubernetes, Jenkins, Git

Tools : VS code, Eclipse, Redis, Git, Docker, AWS, Azure, Linux, Jira, Figma
